

List1

Message List Explanation

The format for the message list is similar to that of commonly used packet BBS programs. The symbols for type and status are consistent with the packet system.

Msg = Message number (assigned by the system)

T = Message type as follows:

- P - A private message, may only be read by the addressee, originator, sysop or remote sysop
- B - A bulletin
- T - An NTS message

S = Status as follows:

- N - Message not yet accessed forwarded to the addressee
- + - Same as 'N' except over 24 hours old
- ++ - Same as 'N' except over 48 hours old
- Y - Message forwarded

TO = Call of addressee

AT = Call of addressee's BBS (followed by a period when hierarchical routing is used.

FROM = Call of originator

FILED = Date/Time (UTC) message was entered into the originating BBS

SUBJECT = The subject line of the message
