

Control Operator

Who is in charge of a station when an Amateur Radio is on?

Who is the one whom the FCC says
must never leave the station alone?

Who is responsible for all traffic in and out
during the station's "ON AIR" transmission?

Who is the station authority relied upon
to carry on the Amateur Radio Service tradition?

The Federal Communications Commission states;

"Every Amateur Radio Station in use
must have at the station's control point
someone to help prevent its abuse!"

Thus, there must be a 'control operator'
to ensure the station is properly run.

If it were not for a control operator
the Amateur Radio Service would serve no one!

Chaos, disorder and harmful interference
would become the order of the day!

That's WHY we need someone in control.

To help keep things running efficiently today!
