Intro: How to build a gt snow racer

this is how i made my snow racer gt.
its a fun thing for snow and is fairly easy to make!!

step 1: step 1!

take the stock wheel off of thegt snow racer.

step 2: step 2!

first you have to take a old bike. (i got myne from the dump)
take the handle bars off of it.
keep in mind:
there is a ring that you have to take off so the handle bars will come off and keep the forks too!
you have to drill a hole for were you want the handle bars to be on the get snow racer!

step 3: step 3!

next you need a hack saw or some thing that will cut metal!
as you can see i already cut myne.

step 4: step 4!

then you weld the bars and the thing you cut off in the other step.
if a welder is not avaiable you can just drill an other hole for the handle bars.

step 5: step 5!

now all you have to do is bolt it on snow racer gt!
proably in spring 2009 i have a instuctalbe about go kart!

lavothas says:
this is more of a modification then a build, build implies that you made a snow racer from scratch.
