

Please Note- This is the club's first newsletter put out by Huey Ohmer N5DVI in the winter of 1997. The newsletter department considers this the first newsletter issued and has been retyped here in .doc format for your use and enjoyment.(We have one I wrote to get the people together from before the club was organized, but is not included officially)

In This Issue:UPDATE ON SIX METER REPEATER STATUS

Six Meter Repeater Almost Ready

The six meter repeater modification has been done and ready for the crystals to be sent off for the new frequency upon approval of the repeater coordinators.The frequency that was decided upon for the input is 51.130 MHZ and the output 52.280 MHZ. The reason for this choice is because of the radio specifications and the fact that no duplexer will be used.For economical reasons,separate antennas will be used.

the paperwork is done and in the mail to the frequency coordinators and hope they don't sit on it with the holidays upon us.If it takes too long the only other solution is to take it upon ourselves and use this pair of frequencies.After we hear from the coordinators or if it takes too long to hear from them, I will see about sending the elements off or re-crystal them myself. The repeater controller that I am building is a voice/cw ider. It is almost complete except a DB-9 connector and an enclosure.No link at this time as the main priority is to get it on the air.

I am also working on modifications for commercial mobiles such as the micors,mitrexs,GE's that is hanging around.When I have these figured out they will make good radios to get on six meters with and hopefully have fun with it.When ready with all plans and bill of materials maybe we can have a project day and build modify some of these with out control heads using external speakers and pots.

If anyone has any other ideas,equipment,information,or wants to help please feel free to contact me.
