

## POSITIVE VOLTAGE REGULATORS

- OUTPUT CURRENT UP TO 100 mA
- OUTPUT VOLTAGES OF 5; 6; 8; 9; 12; 15; 18; 24V
- THERMAL OVERLOAD PROTECTION
- SHORT CIRCUIT PROTECTION
- NO EXTERNAL COMPONENTS ARE REQUIRED
- AVAILABLE IN EITHER  $\pm 5\%$  (AC) OR  $\pm 10\%$  (C) SELECTION

### DESCRIPTION

The L78L00 series of three-terminal positive regulators employ internal current limiting and thermal shutdown, making them essentially indestructible. If adequate heatsink is provided, they can deliver up to 100 mA output current. They are intended as fixed voltage regulators in a wide range of applications including local or on-card regulation for elimination of noise and distribution problems associated with single-point regulation. In addition, they can be used with power pass elements to make high-current voltage regulators.

The L78L00 series used as Zener diode/resistor combination replacement, offers an effective output impedance improvement of typically two orders of magnitude, along with lower quiescent current and lower noise.

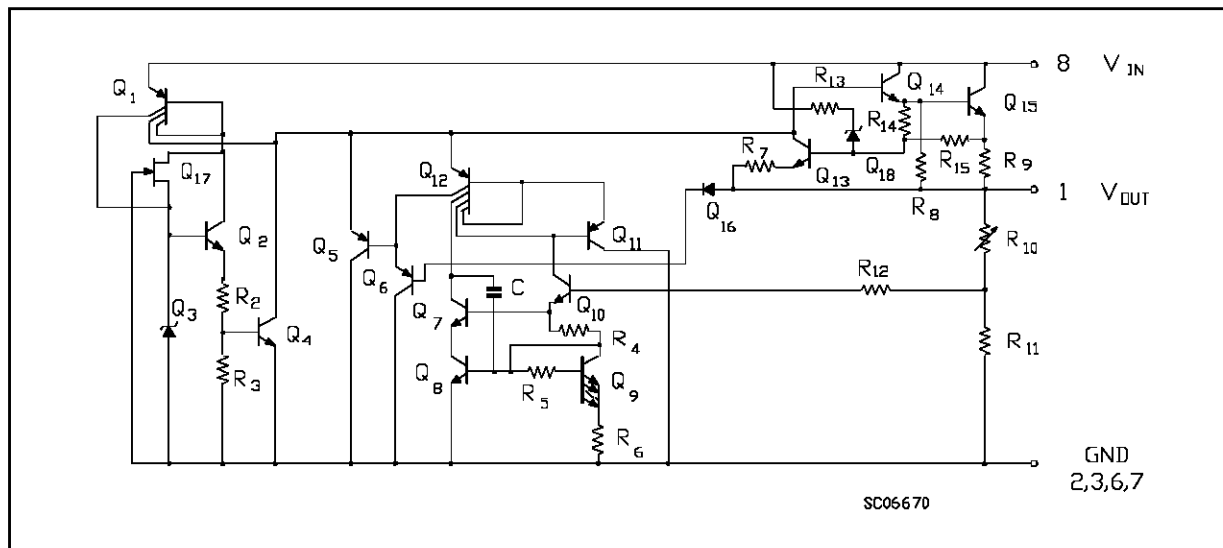

SO-8

TO-92

### SCHEMATIC DIAGRAM

## L78L00 SERIES

### ABSOLUTE MAXIMUM RATING

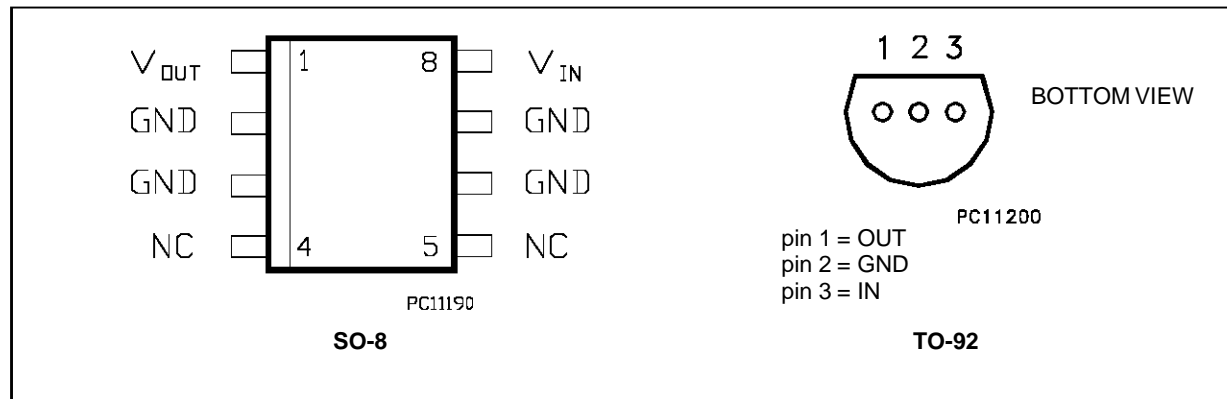

Symbol	Parameter		Value	Unit
$V_i$	DC Input Voltage	$V_o = 5 \text{ V to } 9 \text{ V}$	30	V
		$V_o = 12 \text{ V to } 15 \text{ V}$	35	V
		$V_o = 18 \text{ V to } 24 \text{ V}$	40	V
$I_o$	Output Current		100	mA
$P_{tot}$	Power Dissipation		Internally limited (*)	
$T_{stg}$	Storage Temperature Range		- 40 to 150	°C
$T_{op}$	Operating Junction Temperature Range	For L78L00C, L78L00AC	0 to 125	°C
		For L78L00AB	- 40 to 125	°C

(\*) Our SO-8 package used for Voltage Regulators is modified internally to have pins 2, 3, 6 and 7 electrically commoned to the die attach flag. This particular frame decreases the total thermal resistance of the package and increases its ability to dissipate power when an appropriate area of copper on the printed circuit board is available for heatsinking. The external dimensions are the same as for the standard SO-8
