

Notes
 L1 29 turns on T50-2, Tr1 10 turns bifilar on FT50-43
 Crystals from Elecraft, normally used to make 5 pole K3 filters
 LSB/USB/CW freqs shown are a starting point, see text.
 C2 is select on test to give adjustment above and below frequency
 T3 dissipates 285 mW

C12 and R24 (select resistor value on test), can be added to increase output. A 47 Ohm resistor at R24 gave + 16 dBm output from C7 on test.
