

**NOTES:**

1. Chassis is indicated by symbol  $\text{---} \text{---} \text{---}$
2. Circuit ground is indicated by symbol  $\text{---} \text{---} \text{---} \text{---}$
3. All fixed resistors are 250mW 5% unless otherwise noted.
4. PCB pins 2, 4, 7, 8, 15, and 20 are at circuit ground potential.
5. Voltages shown are measured from point referenced to circuit ground and with power switch on.
6. Voltage readings taken with other switches set as shown, with fine attenuator fully CW and with volume fully CCW.
