

DMR+ IPSC2 DMR Gateway pi-star MMDVM Script

(**Note:** This DMR+ script will allow the use of the talkgroups in addition to the reflectors)

Copy and paste the script below to **network location 2** ensuring you remove the old and replace with this new script (Using TG-8 rewrites)

Any talkgroup that begins with "8" will be routed to DMR+

Red Text indicates a choice you need to make and don't forget to add your 7 digit DMR user ID

```

Note: If you don't want to set any talkgroups as static trim off the tail end of the options like this
Options="StartRef=**4000**;RelinkTime=15;UserLink=1;"

Here you will find the DMR+ Startup Options

Note: Most DMR+ talkgroups and reflector are universal between all the servers with exception of a few special local talkgroups like TG-19, its unique to Ozark only.

Good Luck with it, if you get stuck or need some help or have questions reach out to me
