

The HF Highway

**Our Amateur Radio can be likened to that of an area highway.
With all of it's 'rules of the road' as we travel along it's byway.
Stops and turns being dictated by the layout of every road.
Just as we attempt to travel while carrying our precious load!**

**Along the roads that we travel there are certain limits to know.
As to just where it is we can operate and let proficiencies show.
One wrong turn can spell disaster to our radio which we love.
And then it's back to just an HT without those frequencies above!**

**Knowing where our license class operate helps keep us in check.
And allows us to avoid misuse and becoming a nervous wreck!
Each band that we set our radio on has it's own certain limit.
And it's your license class that tells how far to go within it.**

**Technicians can only go so far on their portions of the bands.
Likewise, the General Class must know the limits at their hands.
But it's the Extra Class who carries the greatest of any load.
They're given the fullest privileges down every ham radio road!**

**By simply obeying the rules of the road we all will better see
A more greater enjoyment of this - Our amateur radio hobby!
Thru time and experience shall come the more better operation
Of that very special electronic device - The Amateur Station!!**
