***A Communications Tool for D-STAR  
And much more...***

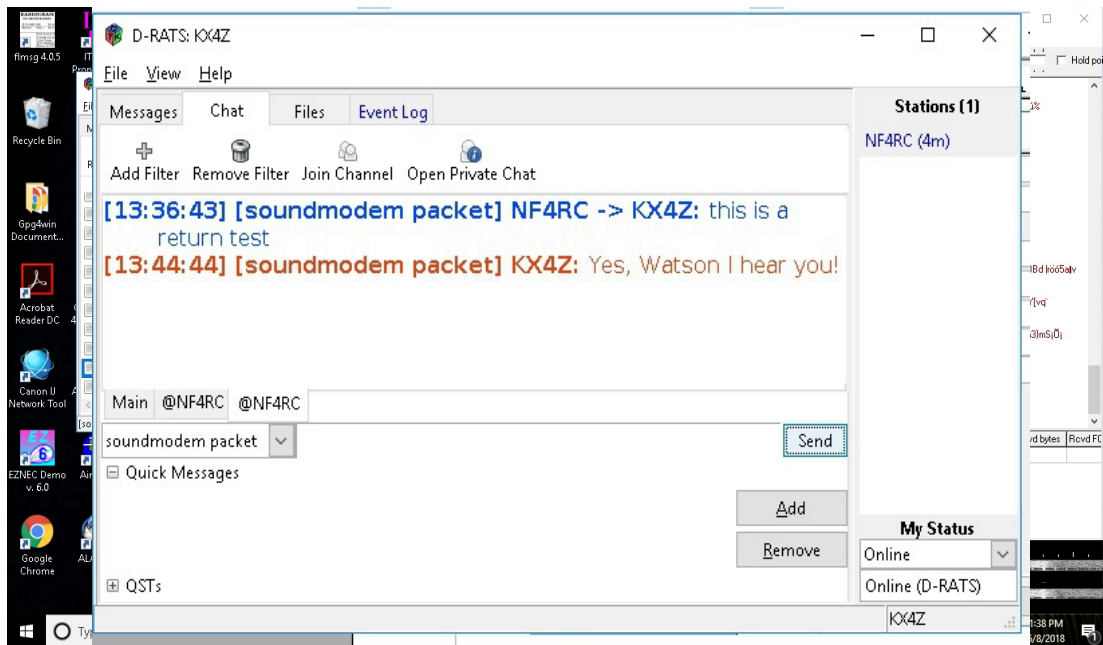

Version 0.3.3

---

# CONFIGURATION:

## SENDING A FILE

### APPARENT STRENGTHS:

- Able to work over multiple data paths, including Internet, Dstart and AGWPE (which allows it to be used not only with AGWPE, but compatible products such as Soundmodem.
- Able to handle chats
- Able to do graphical file transfer operations
- Benefits from the underlying error-free communications of the channel
- Appears to work with the older “RELAY” structure of digipeaters
- Well known in many ARES groups
- Strengths easier to leverage in a DStart or Internet Environment

### APPARENT WEAKNESSES:

- Does not appear to be able to traverse NODES
- Similar features are offered by EASYTERM
- EASYTERM offers more flexibility and much greater ability to traverse long distances using node connections / digipeaters

(My possibly uneducated opinions only)
