Quadruple R/S latch with 3-state outputs

HEF4044B

MSI

The HEF4044B is a quadruple R/S latch with 3-state outputs with a common output enable input (EO). Each latch has an active LOW set input ($\overline{S}_0$ to $\overline{S}_3$), an active LOW reset input ($\overline{R}_0$ to $\overline{R}_3$) and an active HIGH 3-state output (O_0 to O_3).

When EO is HIGH, the state of the latch output (O_n) can be determined from the function table below. When EO is LOW, the latch outputs are in the high impedance OFF-state. EO does not affect the state of the latch.

The high impedance off-state feature allows common busing of the outputs.
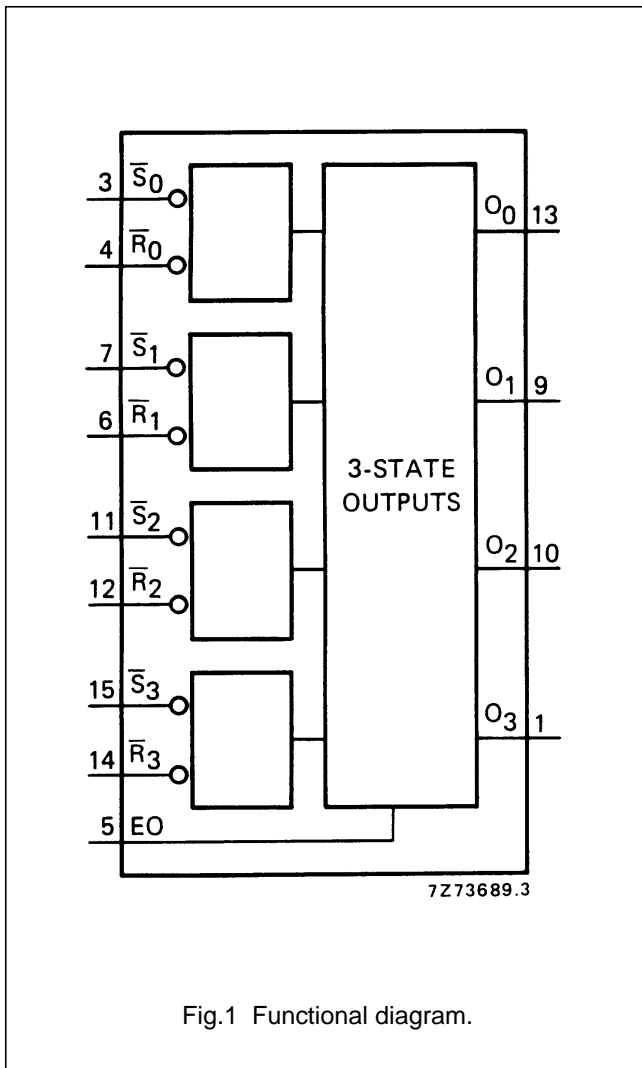

Fig.2 Pinning diagram.

Fig.1 Functional diagram.

HEF4044BP(N):   16-lead DIL; plastic (SOT38-1)
HEF4044BD(F):   16-lead DIL; ceramic (cerdip) (SOT74)
HEF4044BT(D):   16-lead SO; plastic (SOT109-1)
( ): Package Designator North America

PINNING

EO	common output enable input
$\overline{S}_0$ to $\overline{S}_3$	set inputs (active LOW)
$\overline{R}_0$ to $\overline{R}_3$	reset inputs (active LOW)
O_0 to O_3	3-state buffered latch outputs

FUNCTION TABLE

| INPUTS			OUTPUT
EO	$\overline{S}_n$	$\overline{R}_n$	O_n
L	X	X	Z
H	L	H	H
H	X	L	L
H	H	H	latched

Notes
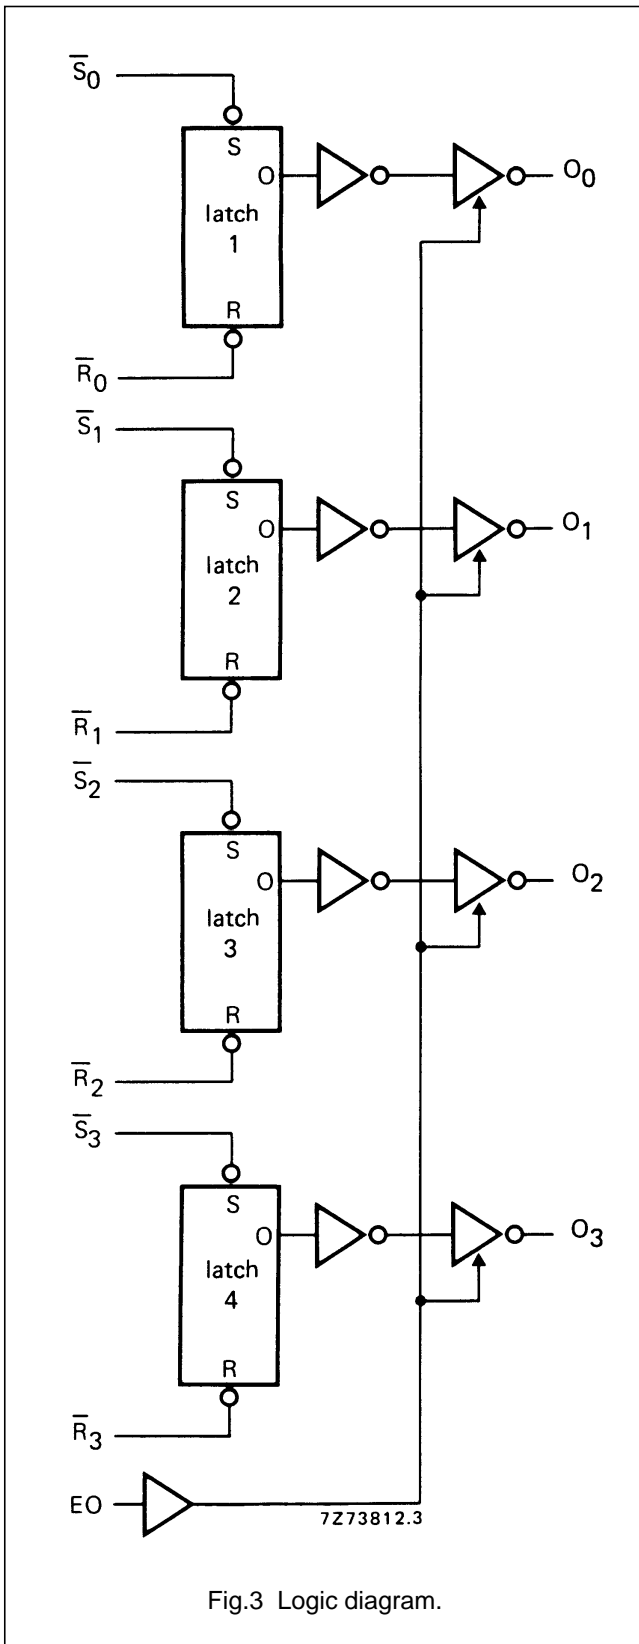

1. H = HIGH state (the more positive voltage)
   L = LOW state (the less positive voltage)
   X = state immaterial
   Z = high impedance OFF-state

APPLICATION INFORMATION

An example of application for the HEF4044B is:

• Four-bit storage with output enable
