SMOM is a fully independent entity with an ancient tradition and glorious history. Founded in 1099, recognized in 1113 by Pope Paschal II, from 1310 to 1522 SMOM had the sovereignty on the island of Rhodes, and from 1530 to 1798 on the island of Malta. Then, after temporary Sees, the Order finally established itself in 1834 in Rome, where it holds several extra-territorial areas. Its members are known as the "Knights of Rhodes and Malta". Under the provisions of International Law, the Order maintains diplomatic relations with many countries as well as with the main International Organizations. His Most Eminent Highness the Prince and Grand Master of the Order, rules a world-wide organization dedicated solely, as its ancient tradition dictates, to providing assistance in the hospitaller, charitable and social fields. The station 1A0KM (Knights of Malta) has been activated by the International Committee of Radioamateurs for UNICEF on the occasion of the earthquake occurred in southern Italy in November 1980.

Our sincere appreciation to all who supported this DXpedition. The Soviet-Vietnamese Joint Venture Company, "CUULONG," which made funds available, to INDEXA, NCDXF, and Mosley Electronics for their support with equipment, antennas, QSLs and much needed funds. We also wish to thank RW3AH, JH3DPB, and the many JAs, XV2 and 3W operators who donated VHF/RTTY stations. Most important is the support we received from individual amateurs and clubs worldwide, who had faith in us to conduct this DXpedition and whose continued support will help us fulfill our financial obligations.

St. Brandon (IOTA AF-015) 16°26'33"S/59°36'28"E: Last time activated 1991 by 3B8CF. In the meantime it climbed to rank 17 in the worldwide list of most wanted DXCC countrys. Thanks to the huge effort of HB9JAI (also4X1DF), Karl-Heinz, it became possible to organize the 1998 operation from this rare spot. The St. Brandon archipelago consists of a large unterwater reef which has an extension of about 60 km in N/S and 10 km in W/E direction. The portuguese name of *St. Brandon* is *Cargados Carajos*. The archipelago is uninhabited. The reef is formed by 22 overwater islands, none of which is larger than 1 sq. km. Our QTH was Raphaël Island – about 300 m long (N/S) and 250 m wide – in the norternmost corner of the archipelago. The soil of the islands consists of coral sand which carries Filao, Badamier and Coconut trees. Also a lot of mangroves protect the islet from wind and water erosion. The waters around the reef belong to the world richest fishing grounds. Water and air temperature were both about 30° C average, serveral daily short rainshowers or rainstorms were normal.

The story of a friendly operation: The crew left Port Louis, Mauritius on May 4, 1998 aboard the 30 m motor yacht *UMBRINA II* (2 x 250 hp). They arrived Raphaël Island in St. Brandon archipelago May 5, late in the evening after a rough 30 hour sail. Most of the ham crew were badly seesick. Landing and unloading by small dinghies through a very shaky and shallow reef. The camp was erected the same night.
We were QRV first in CW and made the first ever QSO on May 6,1452 UTC, one day ahead of the plan. We were fully operative also in SSB on May 8. We managed 4 stations (YAESU FT-1000MPs and FT-920) in a 24hour service. We had 2 operation sites, one with two stations for CW and another one with two stations for SSB and one for RTTY. They had a separation of about 200 meters. We used 2 BIMEX diesel generators, 6 CUSCRAFT beam antennas, 1 Battle Creek and 1 Titanex V80E for the low bands as well as an island brew delta loop for 40 m SSB. We logged **53'533 QSOs**, 19'696 on SSB, 33'064 on CW and 773 on RTTY. Main activity was on 15 meters (12'621 QSOs), on 20 meters (10'058 QSOs) and on 17 meters (8'022 QSOs). On 160 meters we made 511 QSOs. All 40 zones and 155 countries were worked. The crew members slept in single, storm-proofed, high tech tents. Main food was fresh fish. After a superb operation of 11 day with no accident we made QRT May 17 at 0800 UTC. To enhance public relations for ham radio we made daily live interviews with the first program of Swiss broadcasting network (Radio DRS1) by Inmarsat. Another interview has been given to Radio Austria International (ORF).
UMBRINA II lifted anchor on May 18, 0645 UTC. First the ship's crew refused to sail due to very bad weather predictions.Then they were convinced to make an attempt. One hour after leaving the shelter of the reef we had to return from the open sea because the vessel inclined up to 40 degrees.

3D20CR - CONWAY REEF

Sept. 29, to Oct. 9, 2009

TWENTY YEARS AFTER THE FIRST ACTIVATION EVER WE WENT BACK FOR ANOTHER OPERATION FROM THIS REMOTE ISLAND. BACK IN 1989 ONLY A FEW BUSHES WERE ON THE ISLAND BUT TODAY 75 PER CENT ARE COVERED WITH BUSHES AND IN ANOTHER 20 YEARS TIME THERE WILL BE NO MORE SPACE TO SET UP A RADIO STATION. WE ARE NOW AWARE WHAT GLOBAL WARMING HAS DONE THE LAST DECADES. ONE BEACH DRIED IN LOW TIDE BACK IN 1989 AND TODAY THE WATER IS AS HIGH AS 10" IN LOW TIDE.

Guinea is located in West Africa and has 300 km of coastline on the Atlantic Ocean. It shares borders with six countries: Guinea-Bissau, Senegal, Mali, Ivory Coast, Sierra Leone and Liberia. The land area is divided in four topographical regions: Lower Guinea (Maritime Guinea), Central Guinea (the Fouta Djallon), Upper Guinea (the Mandingue) and the Forest Region (the Guinean Ridge). Typical vegetation in Maritime Guinea is the mangrove tree, in Upper Guinea grassy or tree-covered swamp, and in the Forest Region dense forest. The principal watercourses of all the West African countries have their sources in Guinea, which is often called "the water tower of West Africa".

Guinea was a French colony for 60 years, from 1899 to 1958, gaining its independence on 2 October 1958.

The best-known of Guinea's masks are the Baga nimba, which depict the goddess of fertility, a woman with large breasts and scarifications representing grains of rice, the main Baga crop. The Baga wear the masks during weddings and agrarian festivals to beseech the goddess to increase the fertility of women or the earth. Baga and Nalo women wear the wooden and raffia banda mask, which depicts a horned crocodile and invokes the water spirits for rain. The Baga's bird-shaped labemp is used on festive occasions and celebrations marking the end of initiation rites.

Location during our stay in Guinea was the Hotel Riviera Guinée. We operated simultaneously with up to four stations from 160m to 6m. We logged 52385 QSO's, including 1240 on 160m, 4287 on 80m, 3263 on 30m, 5437 on 17m, 6559 on 12m, 2103 on 6m, 2221 on RTTY, 170 on PSK31 and 66 on SSTV.

Many thanks to all who made this DXpedition possible, especially to Khalil, our Guide, Francois, VE2XO and Bernd, DF3CB for the pilot and website support and Joost, ZS5S for Pactor MBO support. Thanks also to Kabel Kusch.

◀ M/V Aurora and her skilled crew of seven lead by Capt. M. Berentsen brought the 12 expedition members from 5 nations safely from Montevideo to Bouvetøya and back.

▶ The ICOM lines performed day and night, in spite of many power breaks, large temperature fluctuations and rough handling.

▲ The helicopter, essential for the landing and departure operations, was taken on board before Aurora left Norway.

THE EXPEDITION

This challenging expedition included five radio amateurs, two scientists, a film team of two, a helicopter crew of two and a camp assistant.

The expedition arrived at Bouvetøya December 25, 1989 and started landing operations the 27th. The amateur radio operation commenced December 28.

During the next 16 days the radio amateurs made nearly 50,000 contacts on CW, SSB and RTTY, 160-10m.

The scientists mapped the census of penguins and seals, and studied the behaviour of penguins. The film team shot seven hours of 16mm film for cinema and TV.

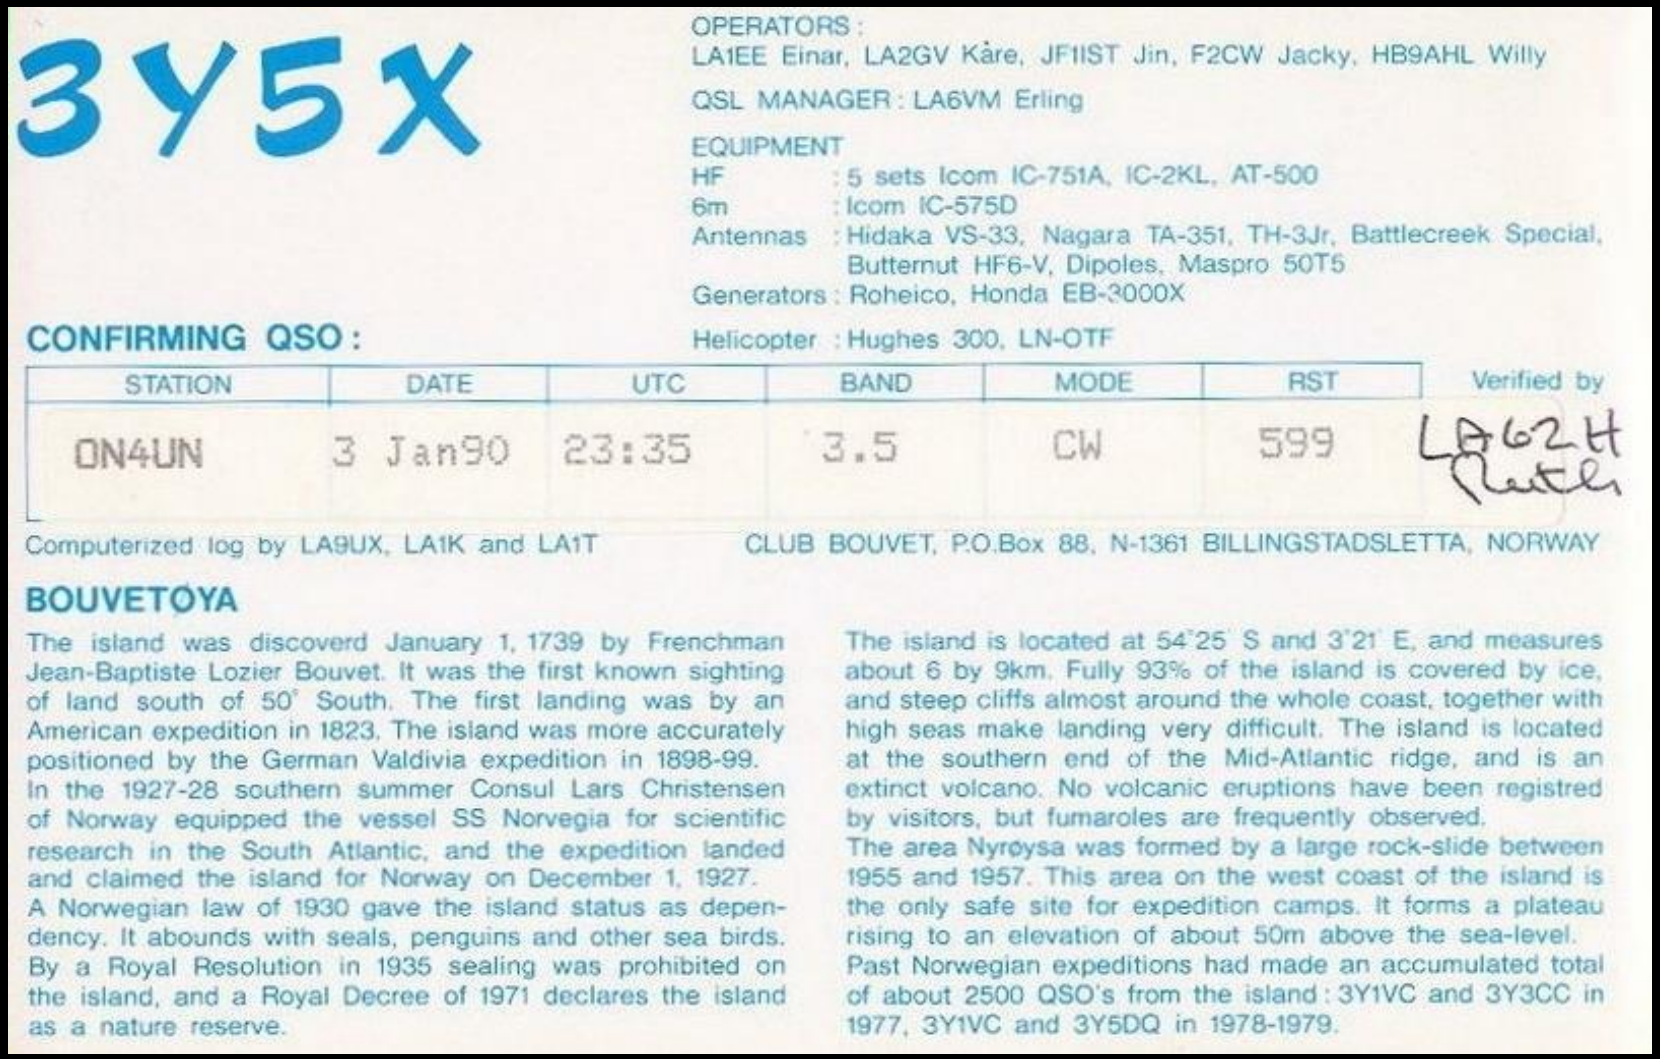

The 250th anniversary of the discovery of Bouvetøya was celebrated, and a commemorative plaque in the honor of Consul Lars Christensen was bolted to a rock on the western shore (Nyrøysa).

This expedition was organized by three Norwegian radio amateurs, who founded Club Bouvet on May 17, 1989. The founders were LA1EE, LA2GV and LA6VM.

The project was supported by the Norwegian government and a number of organizations, clubs and individuals in 30 countries. Club Bouvet wishes in particular to acknowledge the initiative and support by Mr. Thor Christensen, Sandefjord, The Ministry of Environment, Norsk Polarinstitutt, the Japanese ham community and LA-DX-GROUP.

We hope you enjoyed the show !

CLUB BOUVET, P.O.Box 88, N-1361 BILLINGSTADSLETTA, NORWAY

BOUVETØYA

The island was discoverd January 1, 1739 by Frenchman Jean-Baptiste Lozier Bouvet. It was the first known sighting of land south of 50° South. The first landing was by an American expedition in 1823. The island was more accurately positioned by the German Valdivia expedition in 1898-99.
In the 1927-28 southern summer Consul Lars Christensen of Norway equipped the vessel SS Norvegia for scientific research in the South Atlantic, and the expedition landed and claimed the island for Norway on December 1, 1927.
A Norwegian law of 1930 gave the island status as dependency. It abounds with seals, penguins and other sea birds. By a Royal Resolution in 1935 sealing was prohibited on the island, and a Royal Decree of 1971 declares the island as a nature reserve.

The island is located at 54°25' S and 3°21' E, and measures about 6 by 9km. Fully 93% of the island is covered by ice, and steep cliffs almost around the whole coast, together with high seas make landing very difficult. The island is located at the southern end of the Mid-Atlantic ridge, and is an extinct volcano. No volcanic eruptions have been registred by visitors, but fumaroles are frequently observed.
The area Nyrøysa was formed by a large rock-slide between 1955 and 1957. This area on the west coast of the island is the only safe site for expedition camps. It forms a plateau rising to an elevation of about 50m above the sea-level.
Past Norwegian expeditions had made an accumulated total of about 2500 QSO's from the island : 3Y1VC and 3Y3CC in 1977, 3Y1VC and 3Y5DQ in 1978-1979.

A NEW COUNTRY BY POPULAR VOTE

THE STORY OF THOSE 117,000 QSOs AT 4O3T

No doubt the participants and operators of 4O3T value one experience above everything else. The beauty and cleanliness of this coastal country coupled with the friendliness and hospitality of its people will make Montenegro everyone's favorite. It's simply a new DXCC country worth a visit – a beauty not to be missed.

This "Hidden Pearl of the Mediterranean" boasts 293 kilometers of beautiful Adriatic Sea coastline dotted with three 4O3T stations. Huge beams radiated RF power to faraway lands to salute this new Republic on its birth. People from 16 countries participated in the DX Festival at various times during a period of three weeks.

But along with the Montenegro experience, people who had never met before proved that one common denominator – DX – would bring them together in a friendly manner to witness an event of their lifetime with team building and group dynamics as well as with enough operating hours under their belts to sense the lifeline of DXpeditioning – running pileups day in and day out on all bands.

We owe a great debt of gratitude to Ranko, YT6A and Dragan, YT6Y along with the Organizing Committee for their efforts in providing those present and others out in the world with one more DXperience and another mega DXpedition as those with more than 100K QSOs are often classified.

We thank Telecom Authority (AGENTEL), NCDXF, EUDXF, Vertex Standard (Yaesu), SteppIR, Acom, Introgaf and SKY Contest Club for their valuable support.

We wish to thank all of the DXers who helped make our 4W DXpedition a memorable one. Hopefully you had as much fun working us as we did getting those 13,000 contacts into the log. Although the trip proved to be challenging in some ways, we feel reasonably satisfied that we had accomplished our goal: "Provide a new country for DXers on the 160, 80, 40, & 30 meter bands." Some 5,400 QSOs were made on those four low bands.

Special thanks are extended to:
- Thor, **4W6MM**, for all his kind logistical support and encouragement.
- Ross, **4W6UN**, for his guidance to insure our DXpedition was both legal and safe.
- Steve, **VK3OT**, for his assistance in bringing us together with the local 4W6 operators.
- Made, **YB9BV**, for his support in logistics and planning.
- Rod, **WC7N**, for his yeoman's job serving as a Pilot Station.
- Andy, **W6/G4VPM**, for keeping our web page current and providing web logs.
- Jim, **N7JW**, and Al, **K7CA**, for building and donating a 160 meter antenna which helped us make 439 Topband QSOs.
- Mr. **Alan Boerenhout** with the United Nations in New York for expediting our licensing request.

ANTENNAS: R7, A3S, dipoles

Our DX-pedition was organized by the Radio Club of Youth Organizations Committee and the Bureau of Communications of the Revolutionary Commitee of Libya. We were active from July, 11, 1995 to July, 25, 1995 on all bands CW and SSB. During this time we made over 35.000 contacts. We had organized the first Libyan Youth Radio Club on the base of International ASSAKR club. We express our hearty gratitude to everyone, who made the 5A1A operation possible: the Bureau of Communications of the Revolutionary Committe of the Great Socialist People's Libyan Arab Jamahiriya, the Government of Libya, the Government of Ukraine.
We would like also personally thank to: Mr. Seid Shenfir, Mr. Sharaf Mohammed Al-Haiali, Mr. Nick Tsymbal, Mr. Alex Chizh, Mr. Valery Eshchenko, Mr. Rafaa Elmadani, Mr. Ali Abdullah Ahlab, Mr. Mohamed Khlaf, Mr. Ali Joida, Mr. Usaama Ismail, Mr. Saddyk, W4BRE, K2ENT, JA1BK, JH1AJT, JK1KRS, JR1IOS, K1GW, UU8JJ, LZ2UA, OM3JW, UX0UN, UT5UT, I0ZV, IK0DWN, IK2ILH, I2MQP, HA8XX and many, many amateurs from around the world for making this such a highly successful DX-pedition.

Talofa lava...

Let me tell you about the country of Western Samoa, situated in the heart of Polynesia.

They gained independence in 1962 an have since enjoyed political stability and economic growth. Most of the people live on the two larger islands of Upolu and Savaii. Around 35,000 live in the picturesque waterfront capital of Apia on Upolu. Ninety percent of the people are full blooded Polynesians. The culture has been developed over some 2,000 years and is strongly infrained in the people.

Visitors to Samoa are normally those who want to explore the South Pacific, learning more about the diverse cultures of the Pacific islanders — Or an enthusiast Ham looking for DX and endless pile-ups from its not often visited coasts.

See You on lowbands!

This trip took me through Uganda, Burundi, Rwanda, Tanzania, Zaire and Kenya. These are the countries I was responsible for as the region telecom manager of the United Nations World Food Programme. WFP is the food aid organization of the UN, moving (only for the Rwanda / Burundi relief operation) a yearly total of 460.000 tons, feeding about 3.000.000 refugees. Based in Kampala, Uganda, our unit tracks the 'flow of the food aid' to the refugee camps, whereas our telecom team itself manages 41 sites, each with HF base & mobile stations, satellite phones and VHF networks. I tried to be active on the ham bands from as many countries as possible, but work priorities and slow administrative licensing procedures often did not allow it. From my base, I ran with a Yaesu FT900/AT (thanks YAESU EUROPE), Cushcraft R7 vertical 10-40m (thanks Oklahoma Comm Center), a homebrew 160-180m vertical (thanks ON4UN), Kenwood TL922 amplifier, AEA PK900 digital modem (thanks AEA), MFJ DSP filter and a Daiwa tuner (thanks ON5TW). RTTY pileups were run with WF1B's RTTY program (thanks WF1B). Thanks to Ghis ON5NT, my QSL manager and the friends in the region 'hosting' me during my trips!

NORTHERN CALIFORNIA DX FOUNDATION, INC.

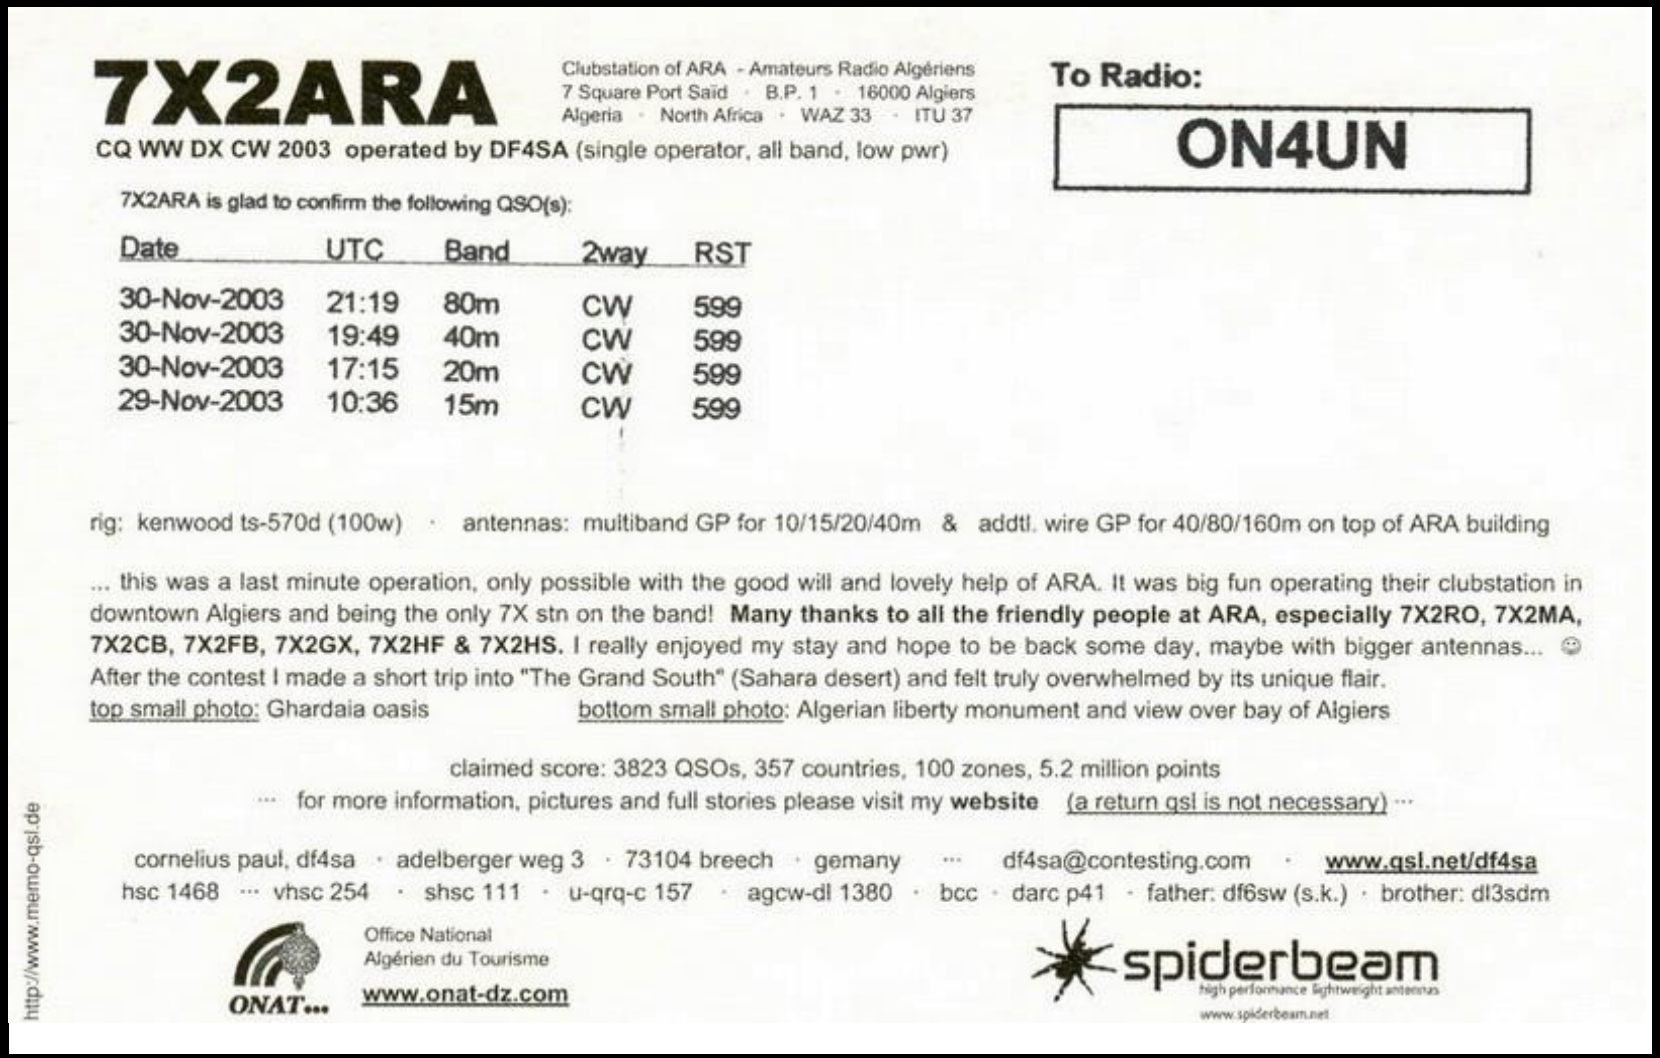

From Aug. 12th to Aug. 21st 1990, I had the opportunity to operate out of Blantyre in Southern Malawi. During a nine day's DX-Pedition, I made about 6.500 CW-QSO's, while using the call sign 7Q7CW. My equipment was an FT 757 GX and a FL 2100 Z linear, which came to a total weight of 53 Kg. Wire antennas like Slopers, Windoms and beams, with a total length of 250 m, were used for the nine different shortwave bands.

rig: kenwood ts-570d (100w) · antennas: multiband GP for 10/15/20/40m & addtl. wire GP for 40/80/160m on top of ARA building

... this was a last minute operation, only possible with the good will and lovely help of ARA. It was big fun operating their clubstation in downtown Algiers and being the only 7X stn on the band! **Many thanks to all the friendly people at ARA, especially 7X2RO, 7X2MA, 7X2CB, 7X2FB, 7X2GX, 7X2HF & 7X2HS.** I really enjoyed my stay and hope to be back some day, maybe with bigger antennas... ☺
After the contest I made a short trip into "The Grand South" (Sahara desert) and felt truly overwhelmed by its unique flair.

Guyana

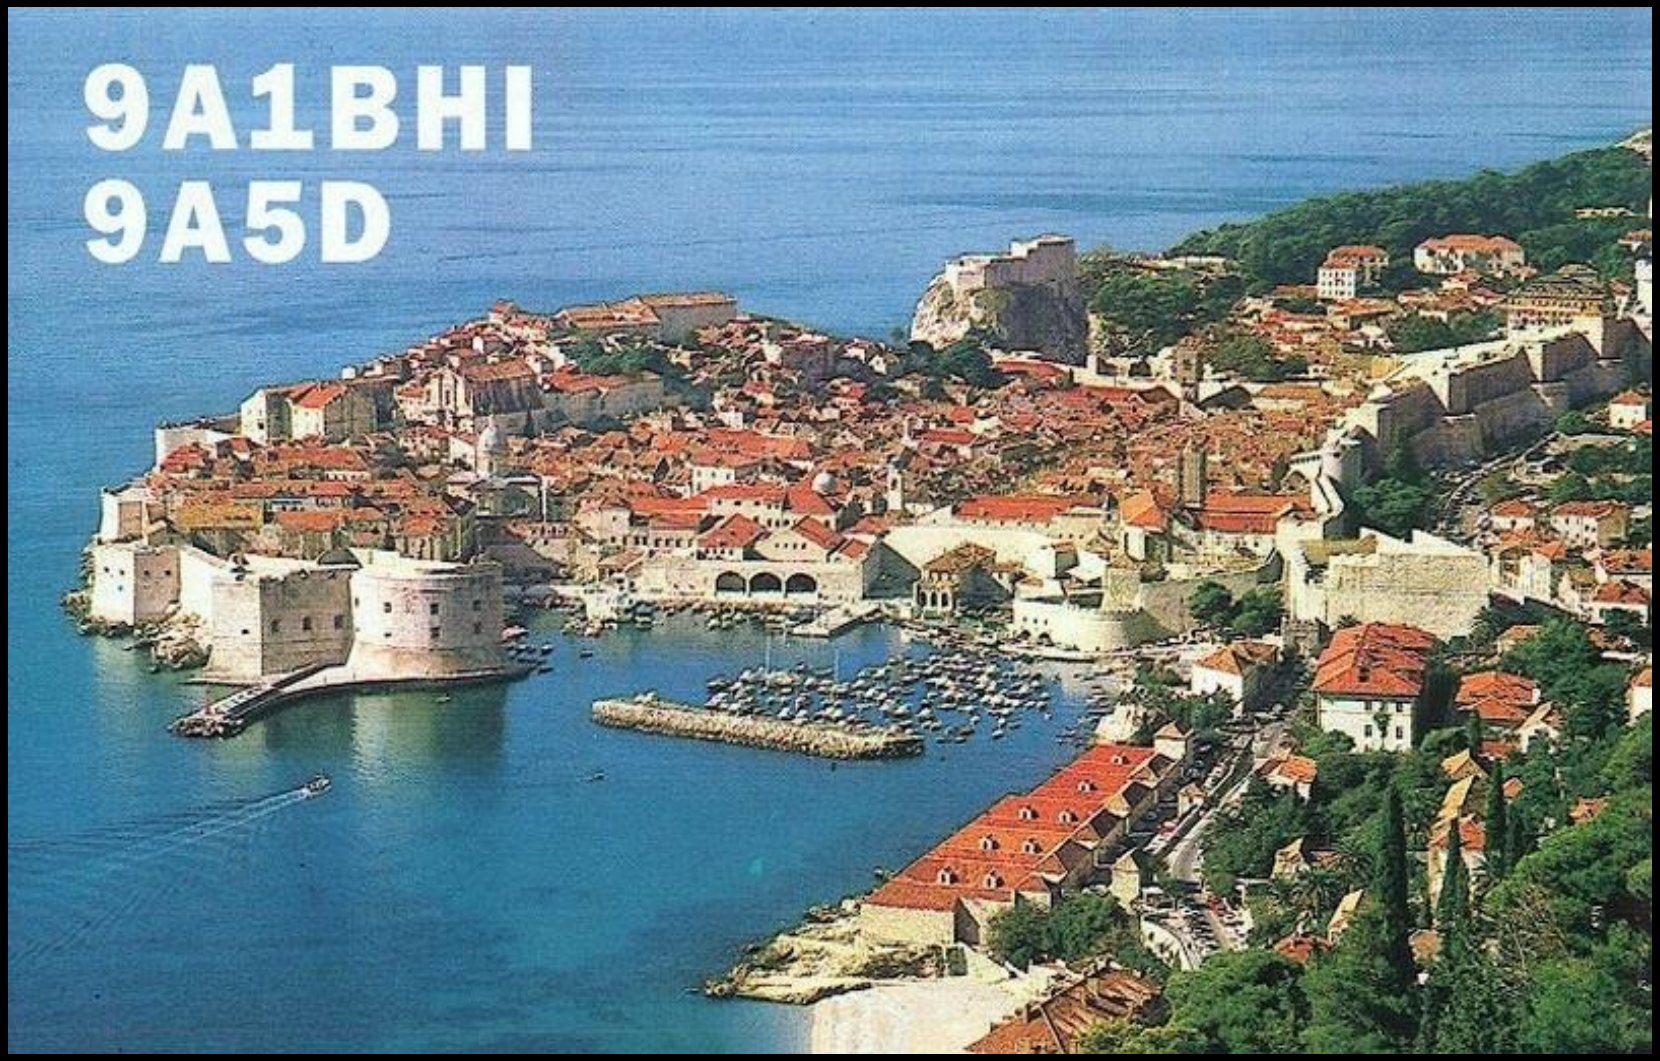

Guyana is a tropical country on the northern shoulder of South America, 215,000 sq km in area approximately the size of Great Britain, and bordered by Venezuela, Brazil, Suriname and the Atlantic Ocean.

Guyana first gain European notice in 1498 with the voyages of Christopher Columbus, it was the stage for competing colonial interest – British, French, and Dutch – until it officially became British Guyana in 1831. In 1966 the country gained independence, and adopted the name Guyana.

Imagine Guyana

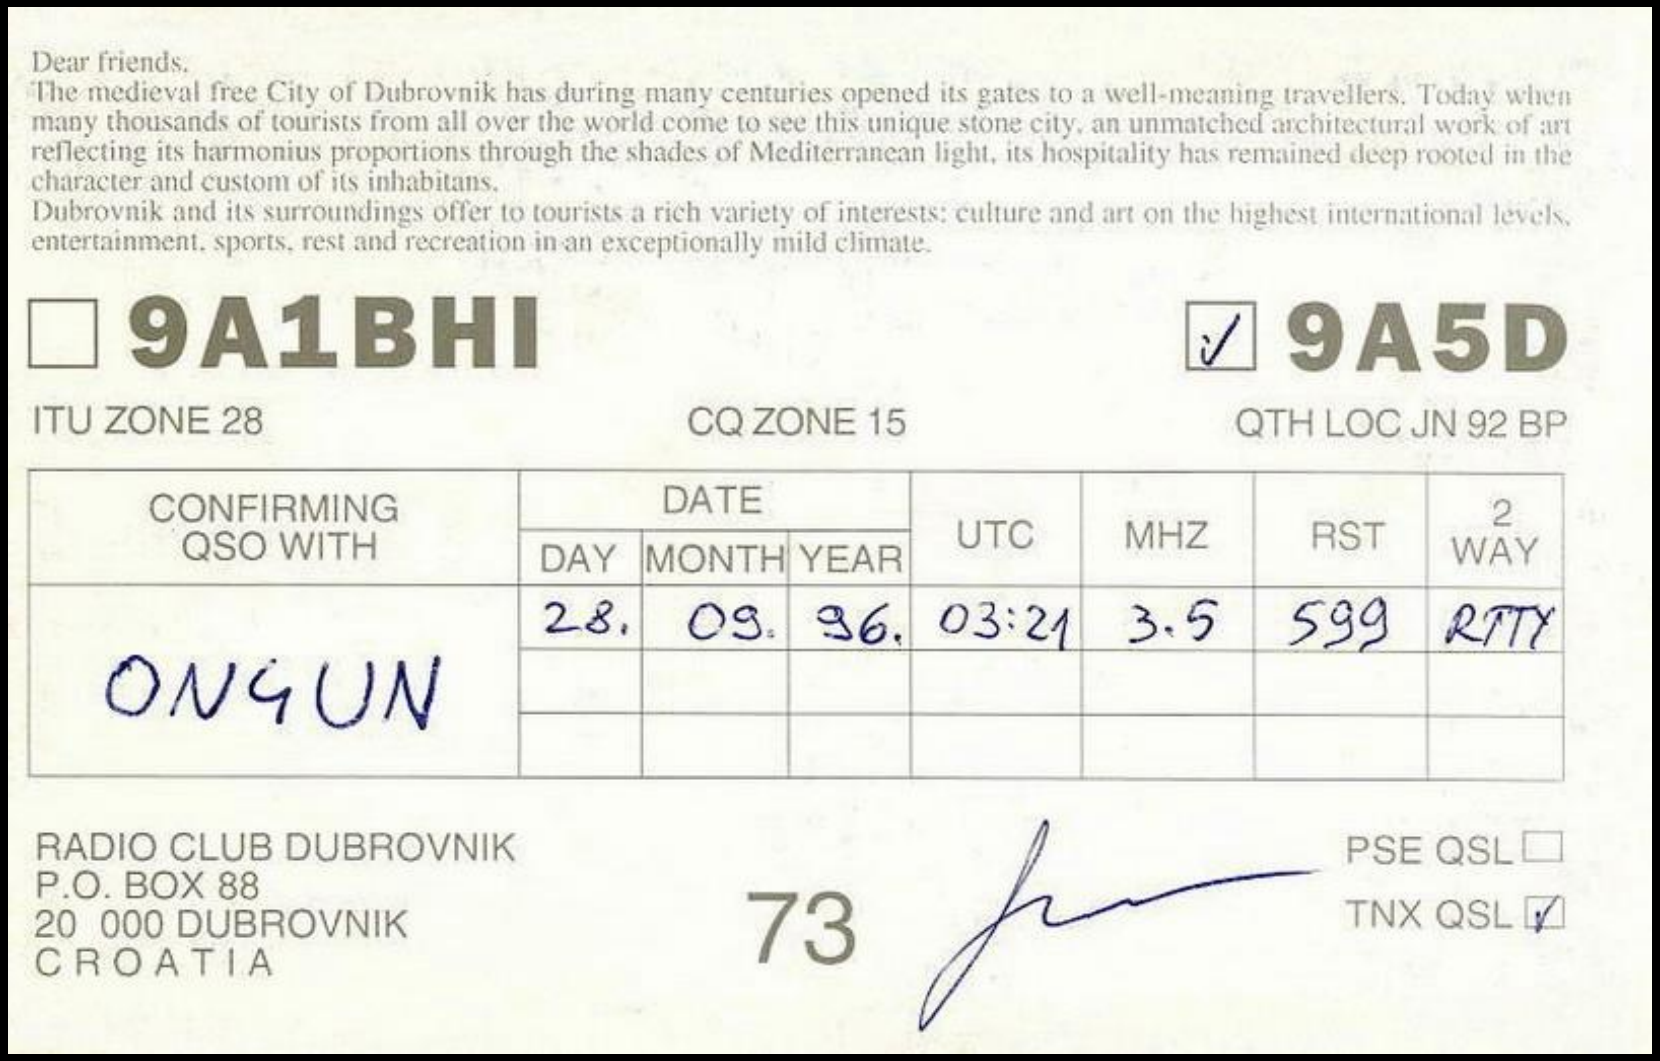

Imagine a place of incredible beauty where nature still reigns supreme, where time has stood still or at least moved at a slower pace to the rest of the world. Imagine a city built almost entirely of wood in the beautiful colonial style architecture that has no comparison elsewhere in the world. Imagine pure, fresh rivers of dark, deep waters reflecting like mirror, the lush and vibrant rainforest that crowds their banks. Imagine the brilliantly coloured birds and butterflies that swoop and soar over their polished surfaces. Imagine a thousand breathtaking waterfalls and magical creeks. Imagine virgin rainforest, home to an innumerable species of rare exotic plant and animal life. Imagine majestic mountains and rolling savannahs as far as the eye can see where ranchers and cowboys ride the last frontier on the open range. Imagine the hiss of the rawhide lasso and the dust and the danger of the coral. Imagine Eldorado, a land that nature has blessed with untold riches of diamond and gold just beneath its surface, where bold adventures set off in search of sparkling treasures. Imagine warm tropical breezes and the song of the tree frogs at night. Now open your eyes, forget imagination. This reality. This is Guyana.

Dear friends.
The medieval free City of Dubrovnik has during many centuries opened its gates to a well-meaning travellers. Today when many thousands of tourists from all over the world come to see this unique stone city, an unmatched architectural work of art reflecting its harmonius proportions through the shades of Mediterranean light, its hospitality has remained deep rooted in the character and custom of its inhabitans.
Dubrovnik and its surroundings offer to tourists a rich variety of interests: culture and art on the highest international levels, entertainment, sports, rest and recreation in an exceptionally mild climate.

9 FEB ~~MAR~~	2102	7	59	SSB ~~CW RTTY~~
12 FEB ~~MAR~~	1848	3.7	59	SSB ~~CW RTTY~~

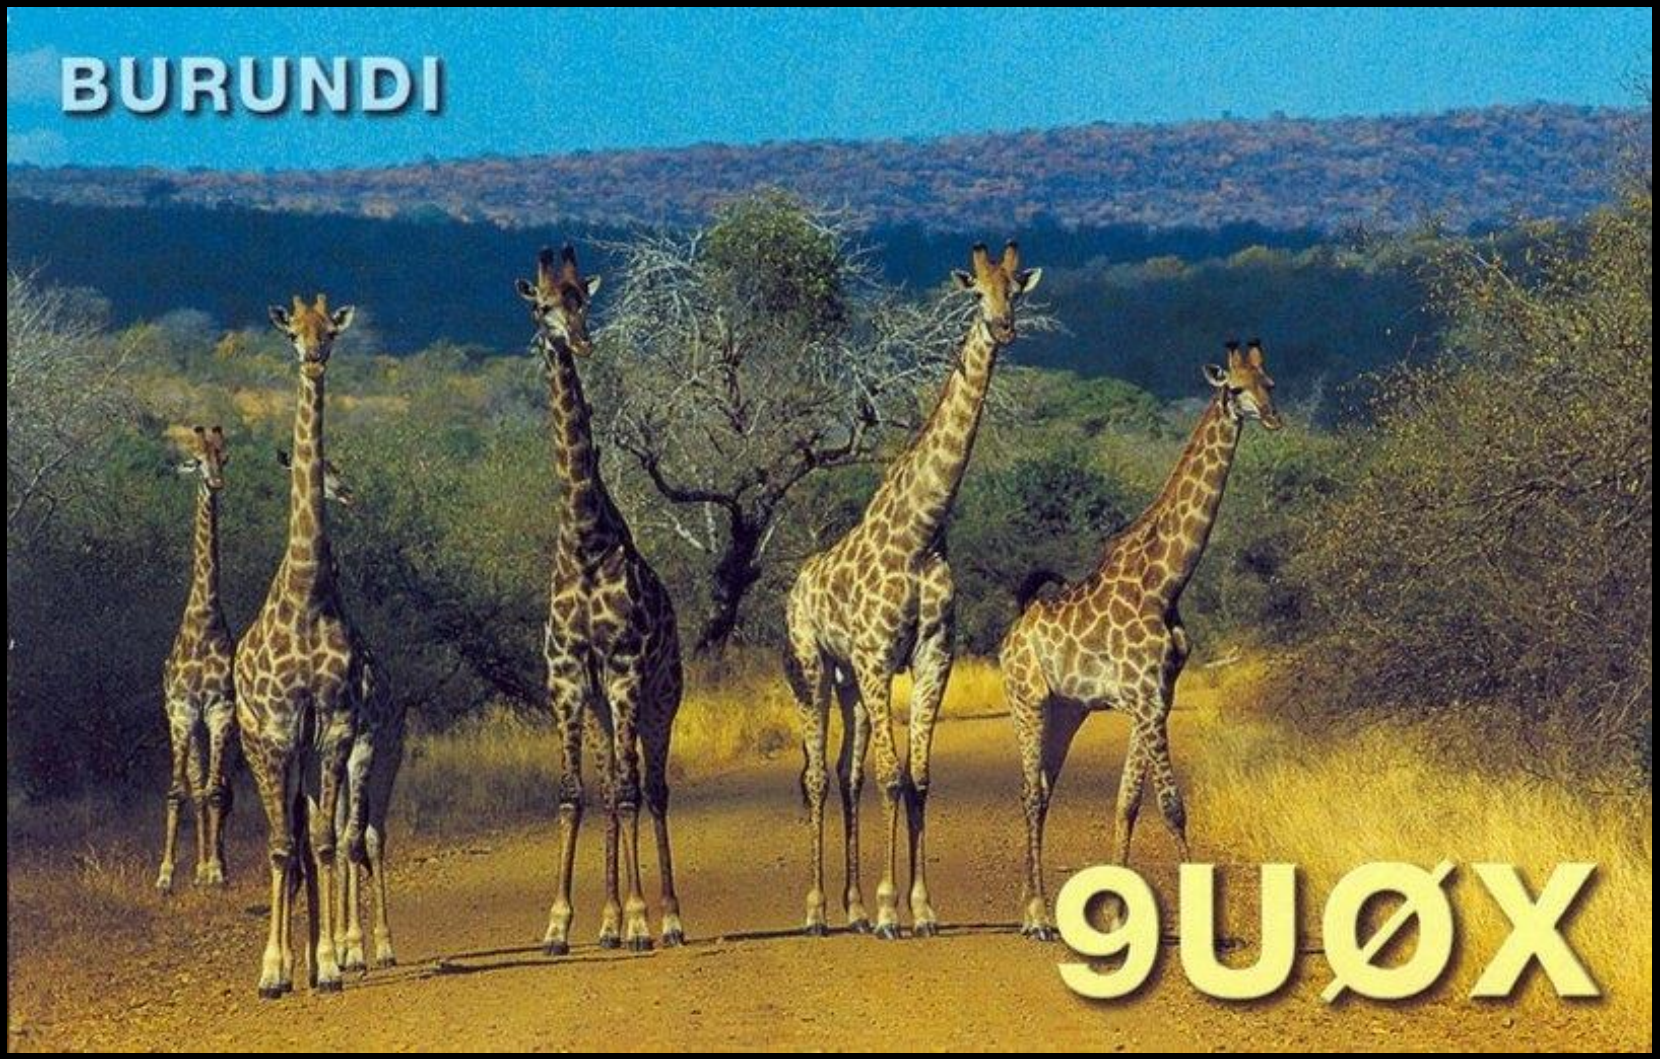

As telecom consultant for the United Nations' High Commissioner for Refugees in Goma, Zaire, I was responsible for the VHF & HF networks and satellite communications. I also supervised a group of operators manning the radio room around the clock. This radio room was the centre of communications and security for the relief organizations working in North-Kivu with Goma as epicentre. And earth shaking activity was abound. One vulcano was in eruption, spitting out smoke during the day and showing a fierce red glow at night. Earth shaking on another level was the influx of the 1,000,000 Rwandese refugees who fled the massacres of last year, living in the four main camps of the area.

A total of 12,000 QSOs were made during my two months mission, incl. 4U0ITU from Geneva and 9Q5TT & 4U9Q during my stay in this hot spot. Equipment used : Yaesu FT900/AT and FL7000 amplifier (thanks Yaesu Europe), a Cushcraft R7 (thanks Oklahoma Comm Center) and a homebrew lowband toploaded vertical (thanks ON4UN). John, ON4UN, also lent me his PK232 for the 700 RTTY contacts and Leon, ON5TW, let me use his tuner. Further thanks go to the expatriates ham gang of Goma (calling themselves 'Antennes Sans Frontières'), the 4U1ITU crew, to Hugo, ON7GB, for sponsoring the QSLs and Ghis, ON5NT, my faithful QSL manager.

I dedicate this operation to Lana, our two months old daughter. May she grow up in a world where humanitarian actions of this scale are not needed anymore.

73, Peter - ON6TT

Botswana is a landlocked country in Southern Africa. It is bordered by South Africa to the south and southeast, Namibia to the west, Zambia to the north, and Zimbabwe to the northeast. It is dominated by the Kalahari Desert, which covers up to 70% of the land surface of the country. The Okavango Delta, the world's largest inland delta, is in the northwest. The Makgadikgadi Pan, a large salt pan lies in the north.

We operated simultaneously with up to four stations from 160m to 10m. 27372 QSOs were logged, including 140 on 160m, 1560 on 80m, 3477 on 40m, 2890 on 30m, 1158 on RTTY, 724 on PSK31 and 22 on SSTV.

Many thanks to all who made this DXpedition possible, especially Floyd, N5FG and Bernd, DF3CB for the pilot and website support.

TNX QSL - QSOs verified by DL7UFR

Tonga - unique among Pacific nations - never completely lost its indigenous governance. The archipelagos of "The Friendly Islands" were united into a Polynesian kingdom in 1845. Tonga became a constitutional monarchy in 1875 and a British protectorate in 1900; it withdrew from the protectorate and joined the Commonwealth of Nations in 1970. Tonga remains the only monarchy in the Pacific.

Tonga has a small, open, South Pacific island economy. It has a narrow export base in agricultural goods. Squash, vanilla beans and yams are the main crops. Agricultural exports, including fish, make up two-thirds of total exports. The country must import a high proportion of its food, mainly from New Zealand.

Location during our stay in Tonga was the Heilala Holiday Lodge. We operated simultaneously with up to five stations from 160m to 10m. We logged 41175 QSO's, including 4 on 160m, 1607 on 80m, 4871 on 30m, 7223 on 30m, 7057 on 20m, 4816 on 17m, 5090 on 15m, 5468 on 12m, 5039 on 10m, 2732 on RTTY and 1160 on PSK31.

Many thanks to all who made this DXpedition possible, to Bernd, DF3CB for the pilot and website support. Special thanks to the staff of the Heilala Holiday Lodge.

Please visit our website at: http://www.dl7df.com/a35yz/index.php

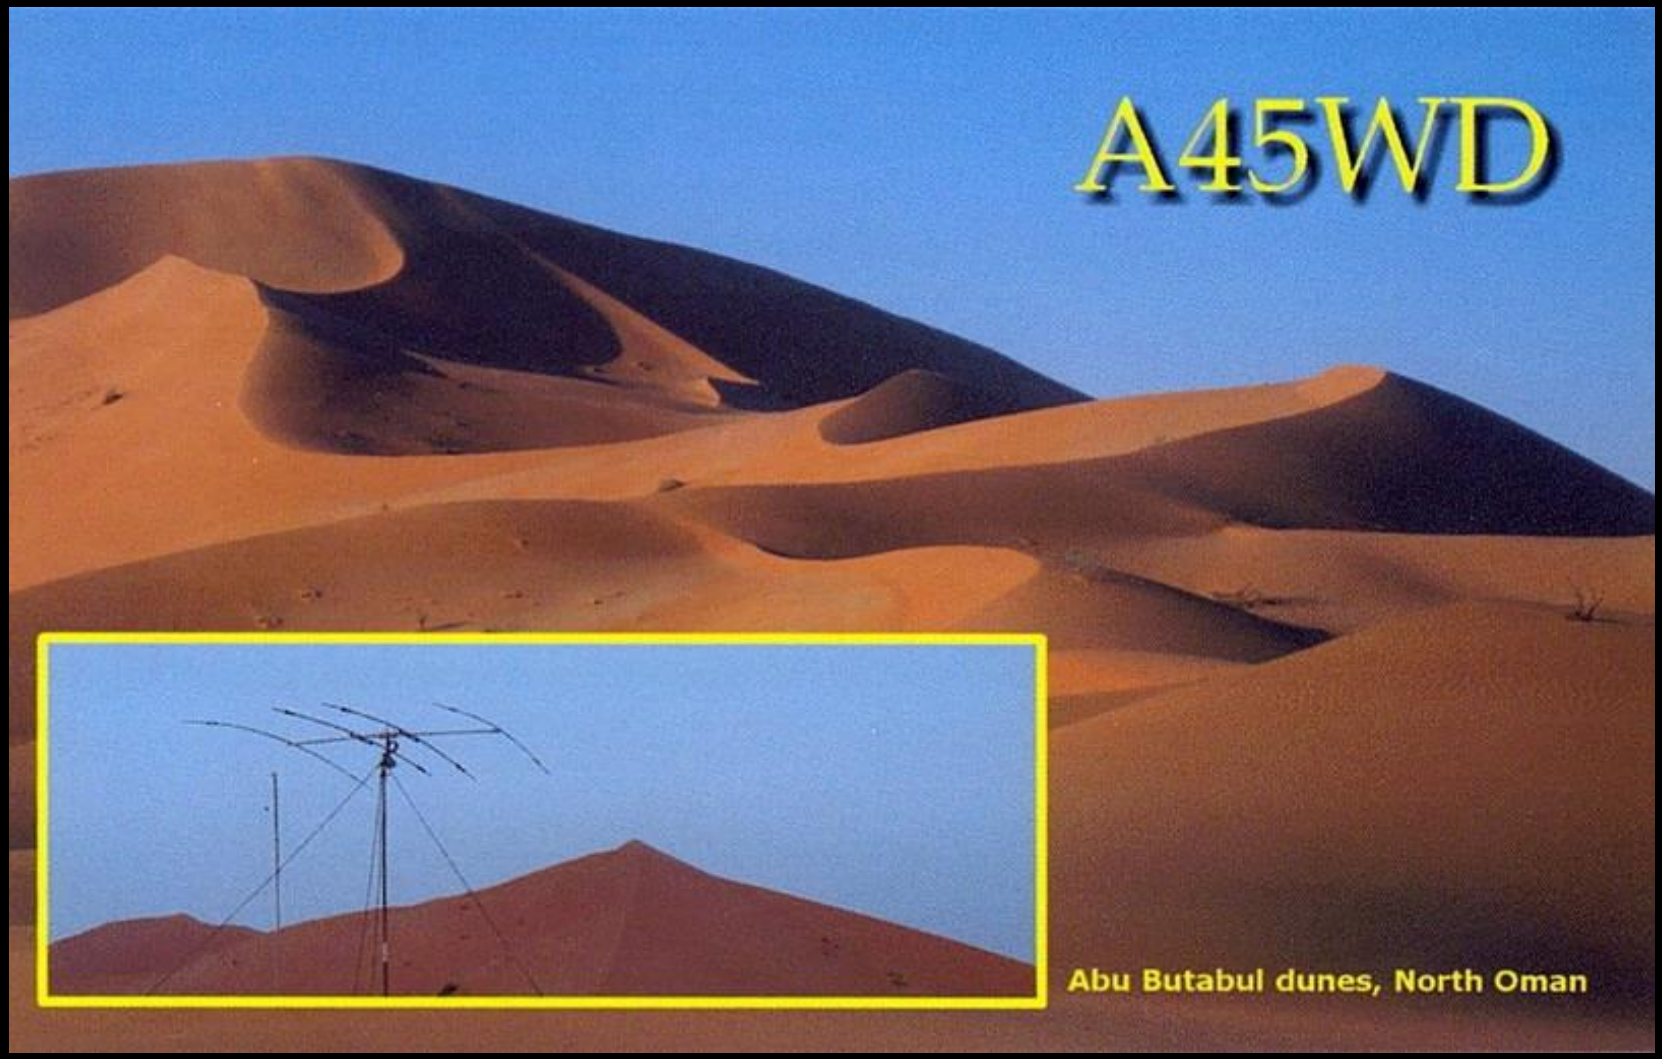

Front: View to Tongan Faleas of the Heilala Holiday Lodge; Tonga's national flower, the Heilala, is the eponym of the Lodge.

80M DXCC QSL CARDS ON4UN

From Bhutan—a Land Shrouded in Mystery

The Kingdom of Bhutan is known as the Kingdom of Dragon. Natural beauty abounds. The people are warm-hearted, polite, diligent and brave.

We are proud to have been able to communicate extensively from the Kingdom of Bhutan with our friends all over the world.

We should like to express our sincere appreciation to His Majesty, the King of Bhutan for granting us this opportunity.

We should also like to express our appreciation and respect to the members of the Royal Government of Bhutan for their efforts.

It was a great pleasure to be able to meet and enjoy warm interaction with so many people, and to learn many things in the Kingdom of Bhutan.

Our heartfelt thanks to all the people who supported this amateur radio operation.

Scarborough Reef, at the time of this activation was the number one most needed entity. It has proven to be one of the most difficult entities ever to operate from. This DXpedition has been in the making some five years and was presented with challenges that changed literally from day to day. After sailing from Hong Kong for almost 80 hours in bad weather on the motor vessel "Deep Blue", the team arrived at the reef. The building of the support structures required time and intense effort and one station on Rock 2 was fully operational the first night by AA4NN and I8NHJ. Rock 4 became operational on day 2, rock 1 on day 3 with rock 3 soon thereafter. When the operation was fully operational, four separate rocks were utilized allowing around the clock operation. The need to operate around the clock proved to be quite a challenge with the night shift lasting more than thirteen hours. Each operating position was completely self-contained with radio equipment, generator and antenna. Only one rock could hold two operators while the three remaining rocks operated with a single operator. Once darkness came there was no way to reach any of the rocks.

In 7 days of operating 45,830 QSOs were made on 160 through 10 meters in 145 DXCC countries using three modes. 20 meters was the most productive band producing 21,880 QSOs. 80 and 160 meters proved to be difficult because of limited space for the antennas required for those bands. Because our goal was to give a new entity to as many DXers as possible, two stations were kept on twenty meters twenty-four hours a day. This resulted in an extremely high number of unique stations worked: BS7H worked 17,884 uniques or 39% of the total QSOs.

Each rock was equipped with an ICOM IC7000, Acom 1010 amplifier and SteppIR vertical. Heil headsets were used on SSB. The 80 and 160 meter operation used a Butternut HF2V and computer logging was accomplished using CT. ICOM 2 meter handhelds provided around the clock local communications.

The team wishes to thank the CRSA for their efforts in obtaining authorization to land and operate. We also thank our off-site support team and web master for their continuing support. We thank BV6HJ who built the platforms and maintained the entire infrastructure. We also want to express our sincere thanks to NCDXF, The Colvin Foundation (ARRL), ICOM, INDEXA, Carolina DX Association, GDXF, W5BXX, K4BVQ, W5IZ, K3DI, W4VHF and AC8G who were principal sponsors by providing equipment and financial support. In addition we wish to thank those many clubs and associations worldwide for their generous financial support. We also wish to thank the Philippine Amateur Radio Association for their sponsorship. And a special thanks to the thousands of DXers who had confidence in our operation and willingly sent financial support. Above all, without the support of all involved this DXpedition could not have taken place.

Last but not least, we wish to express our sincere appreciation and heartfelt thanks to Captain Desmond Woo and his crew of the "Deep Blue" who without hesitation provided 24 hour support in every way imaginable. Captain Woo and his crew had no knowledge of our hobby or what was to come but once the team arrived in Hong Kong and began the operation and all that it entailed they quickly adapted to every requirement with efficiency, enthusiasm and professionalism… and we hear they are ready to go again!

U.S. Senator Barry Goldwater, K7UGA, led a group of Washington, D.C. amateurs to Taiwan the first week of January 1986. The BVØBG station was established in Taipei, the capital city with a population of over 2 million persons. Among the 7,000 QSO's made all over the world in seven days were the first ever from BV on 80 and 160 meters.

We appreciate the many persons with the China Radio Association who worked with us in the true spirit of international cooperation to ensure the DXpedition's success. We especially wish to thank Hu Chen-Yung, Sr. and Eddy Hu, Jr., the former and present Association General Secretaries; Tim Chen, BV2A/B, Chairman of the C.R.A.'s Amateur Radio Commission; C. Feng, BV2DA; Shane Tang, BV2FA; and Steve Liu, our guide. The Republic of China Minister of Communications, Dr. Lien Chen, and his subordinate in charge of amateur radio regulation, Mr. Chen Chang-I, also were most gracious.

BQ9P • PRATAS ISLAND • October 9-15, 2003

ITU Zone 44 • CQ Zone 24 • IOTA AS-11Ø • GRID SQ OL8Ø

Operators: Paul BV4FH (team leader), Bill BV3BW, Robert BV3FG, Falk DK7YY, Dietmar DL3DXX, Yuki JI6KVR, Bob N2OO, Wolf OE1WHC and Lester ZL4PO

The 2003 DXpedition marks the eighth visit of amateur radio operators to Pratas Island by members of the Chinese Taipei Amateur Radio League (CTARL) and invited guest operators. As with prior operations, the primary goal of this DXpedition was to provide a new country for those still needing Pratas Island with a special focus on the low bands. After a two day delay due to a typhoon, the team made over 25,000 QSO's, including over 700 on 160 and over 1200 on 80 meters. The team was pleased to have put you in their logs.

The team extends special thanks to the National Coast Guard, the Ministry of Defense and the Ministry of Transport and Communications of the Republic of China for their support in making the 2003 visit a success. In addition, the operators graciously thank Commander Chen, Vice Commander Ju and their staff for their generous support hosting the DXpedition. The team gives special thanks to the Northern California DX Foundation and the German DX Foundation for their support. In addition, the team thanks Heil Sound, who supported the team with headsets and Dunestar Systems, who provided bandpass filters for the DXpedition.

SEPTEMBER 1995
CORDELL EXPEDITIONS

THE EXPEDITIONS: The 1995 Cordell Expeditions to Easter Island and Salas y Gómez were carried out simultaneously during Sept. 1-22, 1995. They were conceived, organized, and led by Bob Schmieder KK6EK and Carlos Nascimento NP4IW. The team included radio amateurs Bob Allphin K4UEE, Max Bachi XE1XA, John Brosnahan WØUN, Craig Boyer AH9B, Luis Chartarifsky XE1L, Paul Daley WT8S, Vincent Denecker GØLMX, Don Dvorak KE6QZZ, Dave Farnsworth WJ2O, Ralph Fedor KØIR, Lee Hallin WB7SND, Bill Hein AA6TT, John Hilbish W3UM, Enno Korma PAØERA, Wes Lamboley W8FMG, Nellie de Lazard XE1CI, Joe Rich N1OCS, Jim Riff K9JSC, and Albert Zaehner HB9BCK. Science divers and technical support persons included Albert Boosman, Marcel Duhart, Ricardo Olsen, Sue Estey, Gunthar Hartwig, Barbara Hilbish, Bill Kruse, Gail Kruse, Harry Sherman, Steve Smith, and Martin Tosseyn. The radio teams logged almost 40,000 QSOs on all bands during 15 days of operating, including contacts using SSTY, RTTY, and 6-meter EME. The expedition developed a variety of new techniques for remote communications, including an internet connection to the expedition site, e-QSLs (e-mail), next-day QSLs (U.S. mail), WWW pages, publically posted logs, FTP downloadable logs, callsign server access to the logs, an expedition internet reflector, barcode printed on QSL card, real signal reports, dupes requested, and an automatic beacon. The expedition is documented in a book by KK6EK.

EASTER ISLAND, or Rapa Nui, is the most isolated inhabited island in the world, lying almost 2000 miles from the nearest land, near 27°S 109°W. Discovered by Polynesians around 400 AD, it remained in such isolation that its inhabitants believed the rest of the world had sunk in the ocean. For more than a thousand years, the Rapanui built hundreds of gigantic stone statues called *moai*, and practiced ancestor worship. Around 1700, they exhausted their resources, and their society disintegrated. Rapa Nui was rediscovered by Europeans in 1722 and annexed by Chile in 1888. In 1955, Thor Heyerdahl led an archaeological expedition to Easter Island. Rapa Nui remains one of the world's great historical enigmas. **SALAS Y GOMEZ**, a tiny barren islet 225 miles ENE of Rapa Nui, known to the ancients as Motu Motiro Hiva, is uninhabited. It measures only 700 m across and supports a large colony of nesting seabirds. It shows no evidence of ever having been occupied.

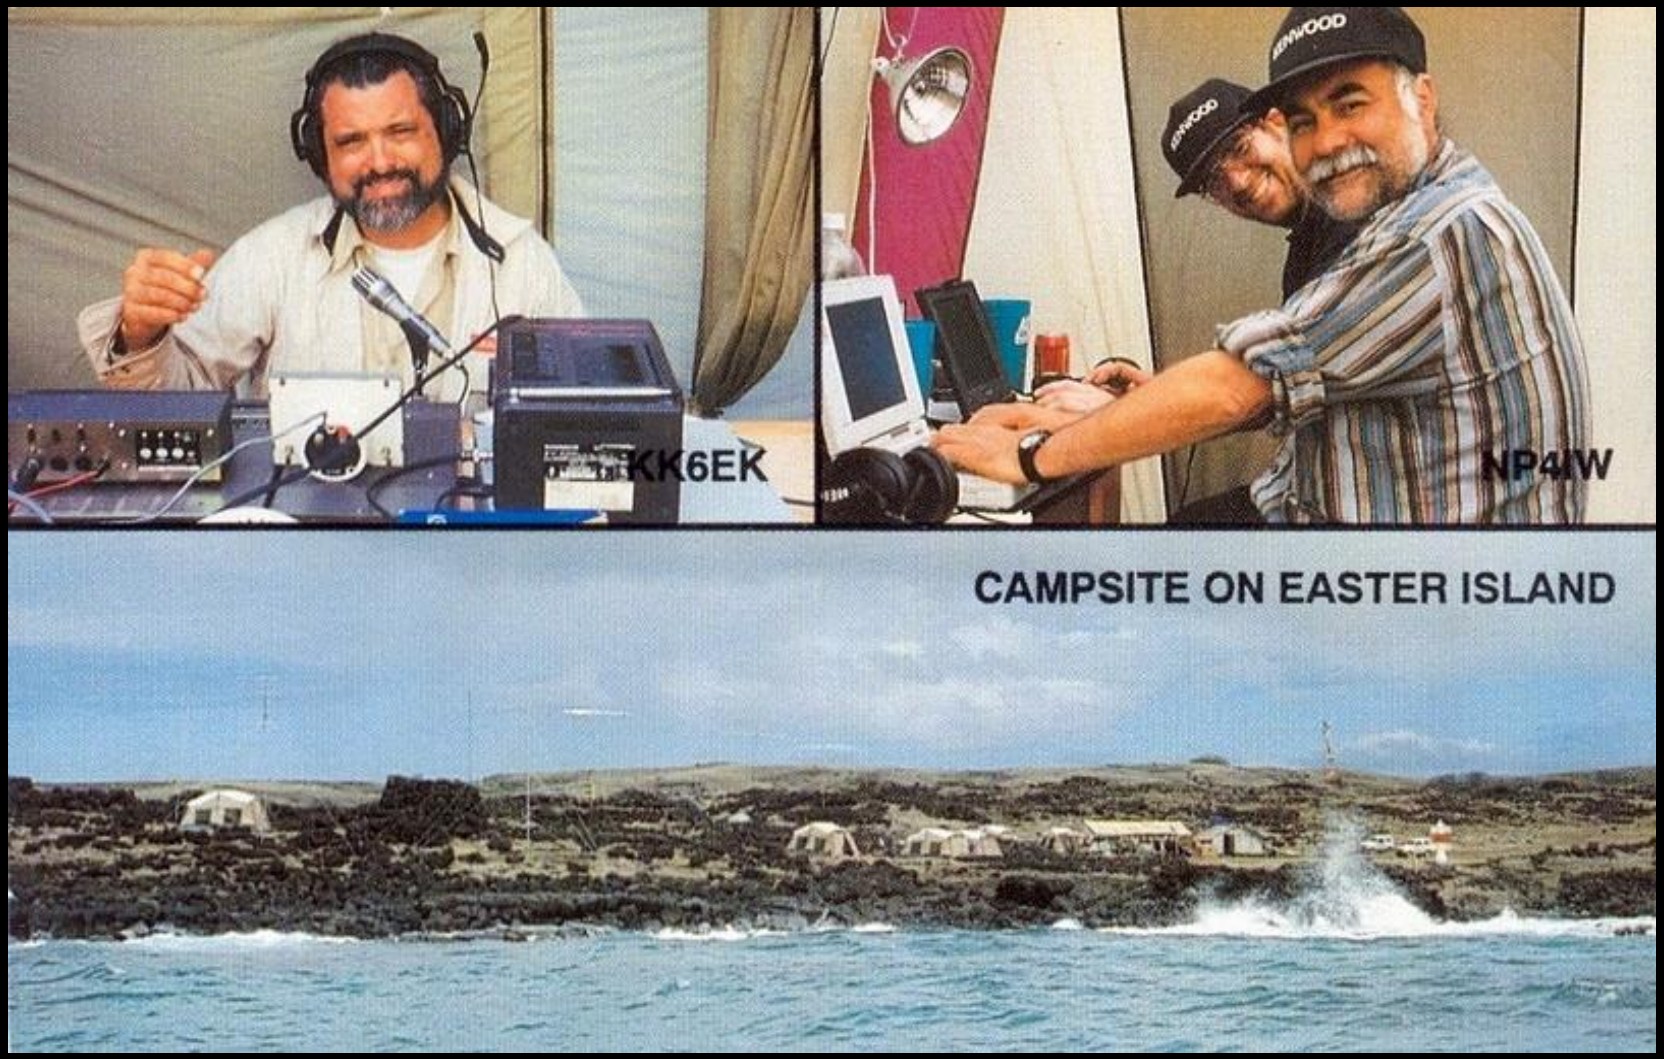

Thanks for helping make it happen...

№ 09190

In 1984, during september and october, and after many years of being inactive, "Radio Club de Chile" was able to organize and run a DXpedition to San Félix Island, wich is under the sovereingty of the Chilean Republic. The official Callsign to use was CE Ø AA.

San Félix Island lies East-West on parallel 80, at about 500 miles west of the Chilean shore, in the Pacific Ocean. Stretching over 1 1/2 mile, with an average width of 1/2 mile, the Island is volcanic in its origin, presenting a grayish lava formation. On its surface, may be seen rotten scoria fragment, showing different grades of porosity, and as if they were recently ejected from an active volcano.

Two chilean amateurs, Max: CE 9 DVN, and Fernando: CE 2 GXY, went to the Island, where they reached an amount of more than 31.000 QSO's. They could also count with the support of many stations helping from the mainland.

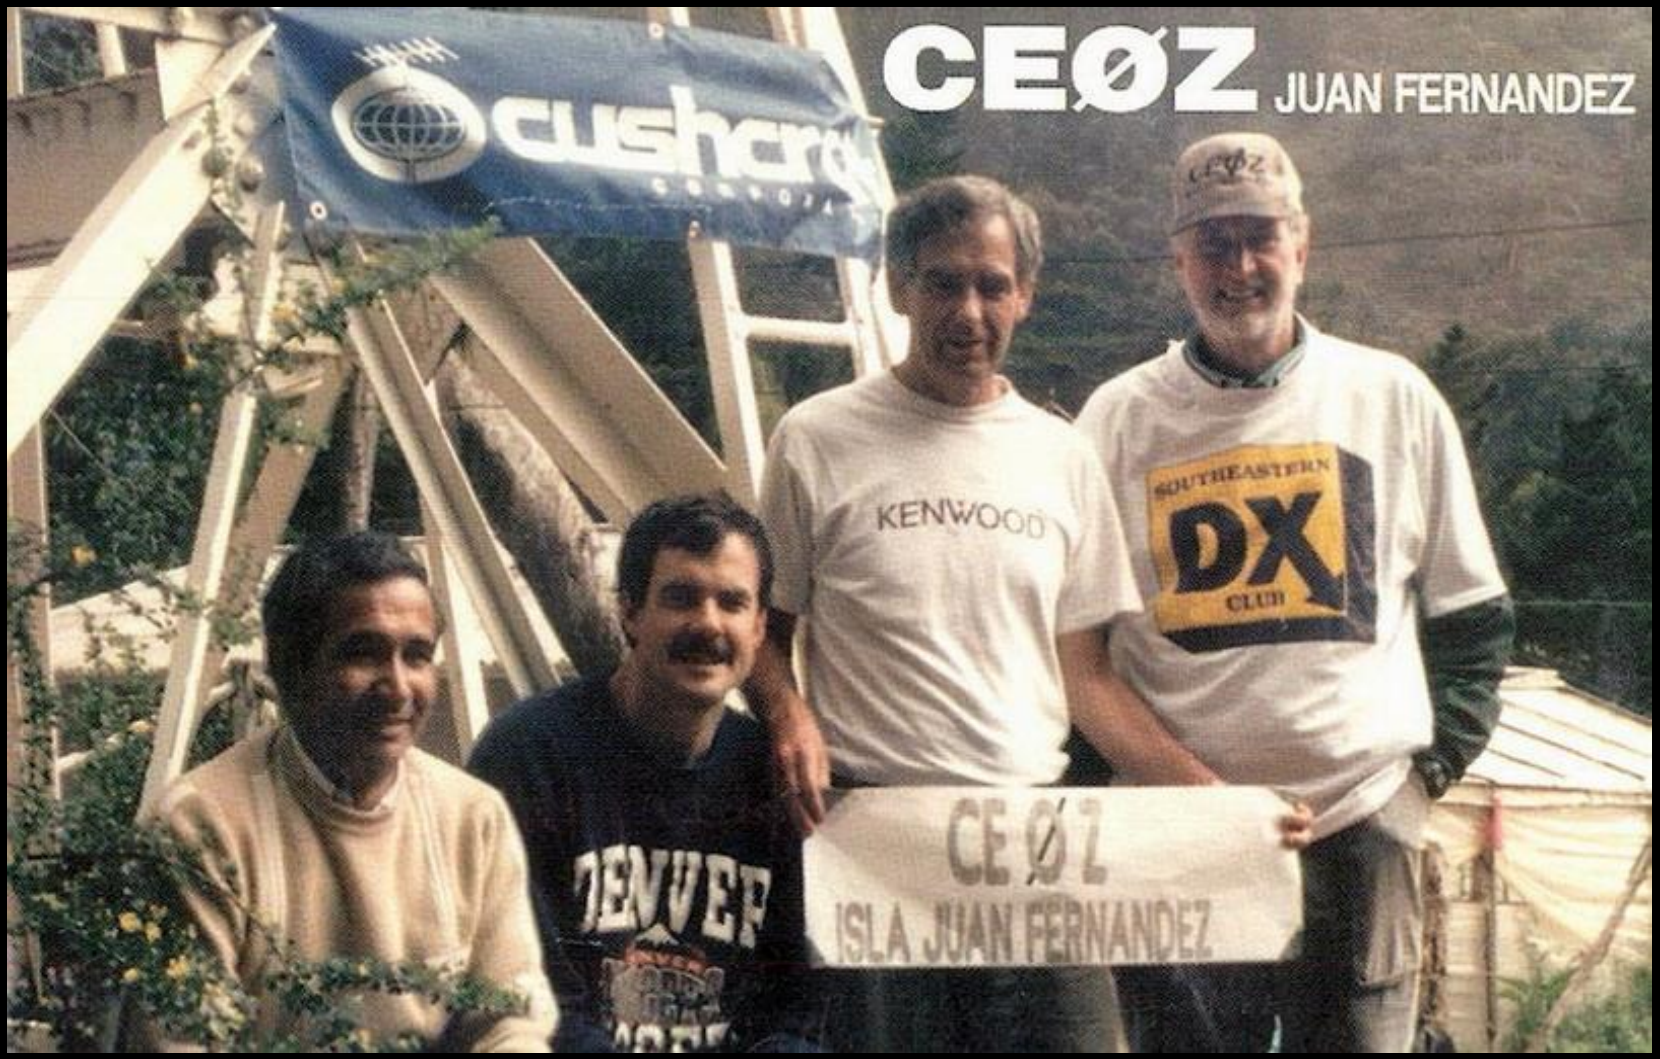

The operation took place in the following bands: 160, 80, 40, 20, 15, 10, and also a few contacts could be done on 6 meters; they used SSB, and CW modes.

Most of rigs, antennas, and in general accesories, used in this operation, were supplied by "Radio Club de Chile", and its members.

Isla Robinson Crusoe

Juan Fernandez Archipelago, Chile

IOTA SA-ØØ5

Stranded on Isla Robinson Crusoe from 1704 to 1709, Scottish sailor Alexander Selkirk's adventures are believed to be the basis of the fictional story of Robinson Crusoe. The exceptional hospitality and assistance of the chief of the aeronautical facility, Heidi and the staff at Villa Green, and the residents of San Juan Bautista contributed greatly to our success and made our visit a memorable one. We owe a special debt of gratitude to Mickey Gelerstein, CE3ESS, and John Torres, CEØZAM. Without their assistance and organization this operation would not have been possible. The following organizations and individuals provided support and assistance for our operation: Cushcraft Corporation (donated the yagis used on 40m and WARC bands), Oklahoma Comm Center, Southeastern DX Club, Mile Hi DX Association, Birmingham (AL) DX Club, North American Satellite DX Fund, N2IC/Ø, WØCP, ON6TT, WF1B.

Operators: Bob Allphin K4UEE, Randy Martin KØEU,
Bob Hamilton KØIYF (QSL mgr.), John Torres CEØZAM.

CUAGN IN NEXT CONTEST, 73 DE DL4NAC

QSL via HB9CRV

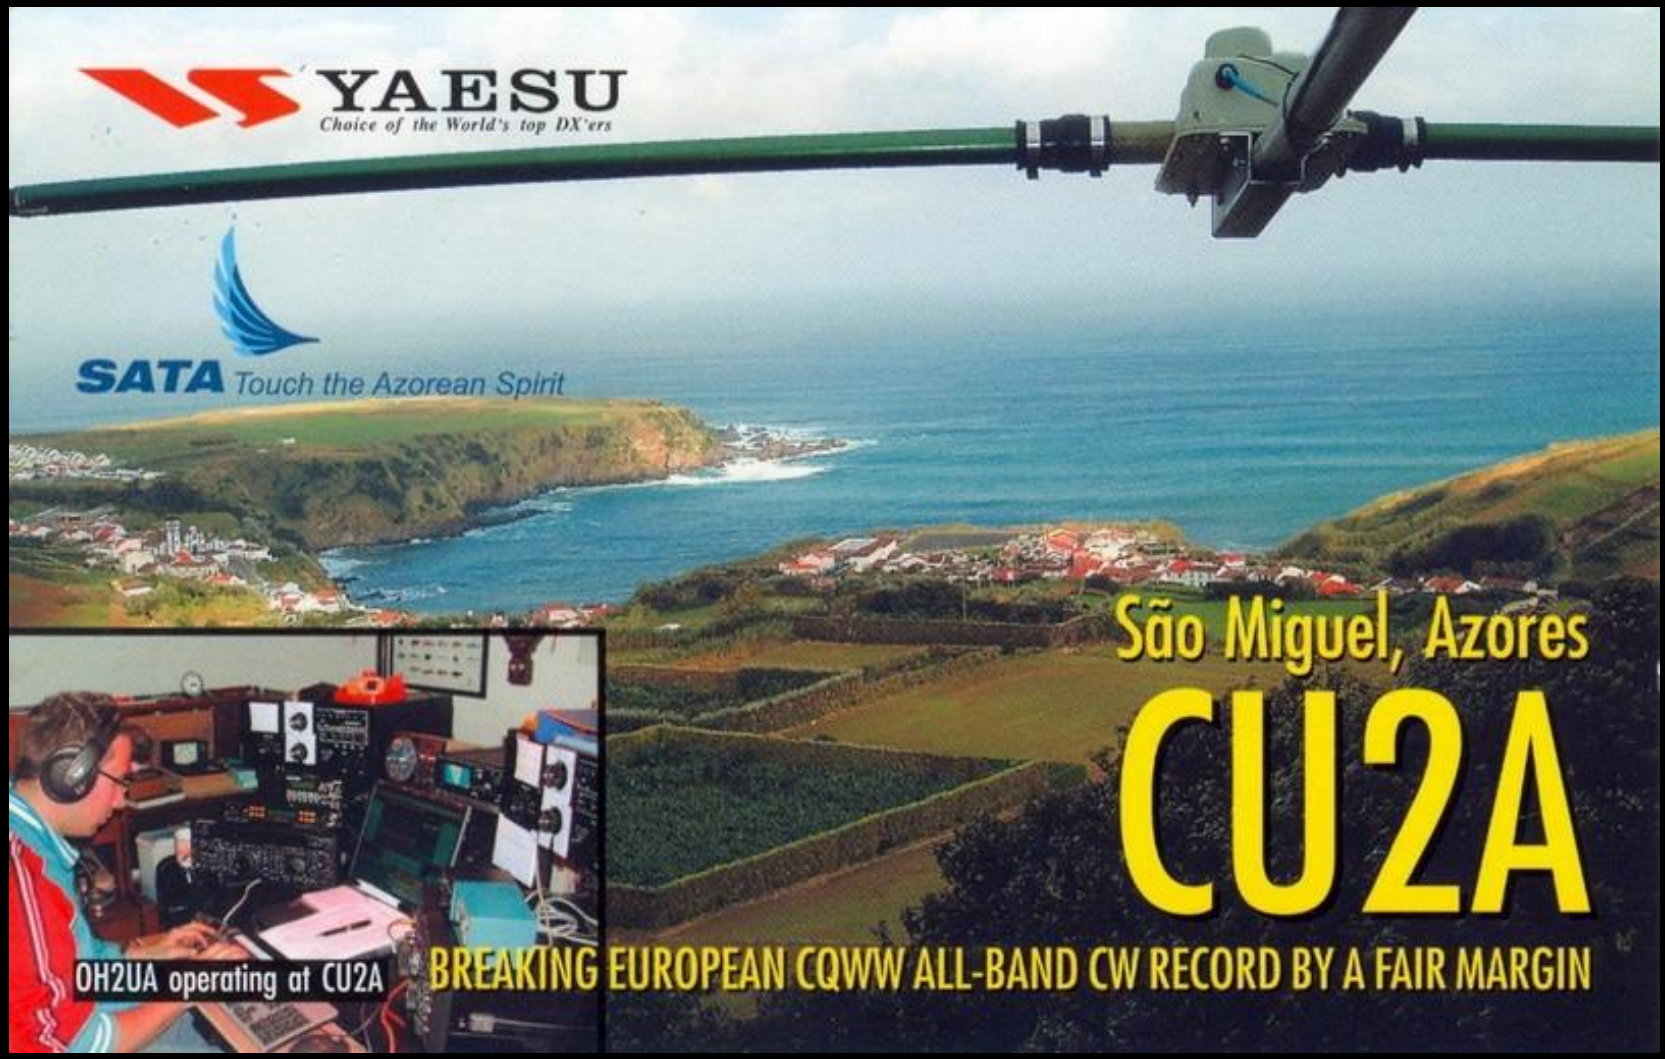

Hi John

The flower garden Madeira is located in the Atlantic ocean, 978 km SW of Lisbon at 32°N and 16°W. It has been discovered 1419 by the Portuguese explorer João Gonçalves Zarco. He named the island »Ilha da madeira« which means »Island of Forests«. Madeira is of volcanic origin. It is 57 km long and 22 km wide and has a mild climate all over the year. Its main industries are wine, embroidery, tropical and subtropical flowers and wickerwork. Come and visit the »Pearl of the Atlantic« with its unique »Levada« irrigation system. The photo on the front side shows a cliff on the northwestern tip of the island, the only part with little vegetation.

One cannot be more fortunate than us with our case in the Azores. Two prominent, internationally minded hams were all in favor of teaming up with us. They saw the value of cooperation with a distant land such as Finland. Fernando, CU2BV, Finland's Honorary Consul in the Azores, naturally saw the benefits in the context of his high office and stepped forth along with always energetic Jose, CU2CE to make things jell.

The Azores-Finland Friendship Consortium was founded with a clear mission: apply a true Ham Spirit and enjoy good Amateur Radio camaraderie while utilizing the latest contesting art over the beautiful Azores landscape, a most western point of Europe.

The 2005 target was set for the CQWW CW Contest, SOAB. Young Toni Linden, OH2UA was charged as the single-handed driver to cut the finish line first in the 48-hour run with wholehearted support from the entire team. Surprisingly, the old European record was outdone by a healthy margin in spite of 10M being practically closed.

To Radio: ON4UN

I'm happy to confirm the following 2-way Qso(s):

Sable Island is located 300 km east-southeast from Halifax, NS. The crescent-shaped, made of shifting sand dunes island is home of the wild ponies with the long, flowing manes and tails. It has also been a temporary home for shipwrecked sailors brought there inadvertently by the legendary gales that blow around the island. Sunken ships litter the surrounding ocean floor, giving the island its reputation as "the graveyard of the Atlantic". Since 1853 there have been 350 recorded shipwrecks on Sable Island.

The CY0MM team stayed on the island from Nov 15 until Nov 29. Nearly 50,000 QSOs were logged by 4 operators on 160-6 m using CW, SSB and RTTY modes. Our equipment consisted of FT-1000MP, TS930, TS-2000 and IC706. Due to the airplane cargo weight limitation we were able to bring only one amplifier along (MLA2500). Antennas used: 7el M2 yagi for 6m, TH2 tribander for 20-15-10, A3WS tribander for 17/12, Delta Loops for 40/30 and verticals for 80/160.

We would like to express our sincere thanks to the following groups and individuals:
Sable Island crew: David MacKenzie and island crew for their help which was instrumental to the success of this expedition
Financial Support: In addition to the sponsors whose logos are displayed, the following individuals and groups helped CY0MM: W2YC, K6BU, N5ID, NN0TT, KU4EC, JA3EJG, G4CWD, VE3CR, K5LAM, K7ER, JA3CWL, PA1555-R40 (SWL), VE3BUC, W3JJ, W0SF, PA0WRS, JR2WCX, HS1NGR, JR1EFG, PA3ARM, JH0BBE, WV2B, W1PL, N5ORT, VE3MR, WB8TGY, N6DMV, JI3BFC, G0JHC, K2FF, KE8J, KT1J and JA8FRI, Oklahoma DXA (K5YAA), Virginia DX Century Club (W4SD), NADXA (NF7E)
Logistics support: VE3NWA - online log, VA3TTN, VE3NFR and VA3VMM -160 m antenna, VE3EJ , VE3FF and VK1AA.

St. Paul Island

ST. PAUL ISLAND, the graveyard of the Gulf of St. Lawrence, is located fourteen miles off Cape North, the Northeastern part of Cape Breton Nova Scotia. A menace to navigation, St. Paul has been the location of countless shipwrecks. Many a dream of early immigrants to North America were thrashed on her hazardous rocky shoreline. Before the establishment of lifesaving stations, many a shipwrecked mariner after fighting their way through rocky outcrops and churning seas to shore, only starved to death on this desolate island. There have been more than a thousand who have lost their lives on the rocks of St. Paul. St. Paul is divided into two parts. The large island has many abandoned dwellings and an automated lighthouse on the Southwest side. The island is uninhabited except for a few birds who nest there. The small island houses the Northeast light and is separated from the large island by a narrow channel of water. Two lighthouse keepers, the ONLY residents of St. Paul Island live in one of the three houses built by the Canadian Coast Guard. We were transported to and from the mainland by the fishboat Debra Margo. During our stay our equipment was powered by a 1.5 kW generator. Three transmitters were operated simultaneously about 21 hours per day. Five beams were used for 6, 10, 15, and 20 meters, and for the first Oscar satellite communications for St. Paul. Inverted Vee's were used for 40, 80 and 160 meters. During our 7½ days we made more than 17,300 contacts in more than 120 countries. Many thanks to the lighthouse keepers, Carl and Paul our fabulous hosts. Thanks also to VE1ZB, VE1RI and the Sydney amateur radio club VE1CR for all of their help. Thanks to those who lent equipment, VE7BSM, VE7WJ, and all those who gave a lot of moral support, especially VE7BFO and W7ISX. A pleasure to work everybody from St. Paul Island.

5-Aug-1995	1959Z	20m	2xSSB	59

This two months mission brought me back to Angola for the second time, as a telecom consultant for the IFRC (International Federation of Red Cross and Crescent Societies). My station was installed in a small compound just outside Luanda. Though far away from city noise, the closeby high tension wires and electrical installations of odd makes, guaranteed quite some radio noise, especially on the low bands. The small lot, with ample space to roll out radials, surrounded by a high full metal fence and low tin roofs did not help either. Every single minute of my spare time was spent on the radio, squeezing 10,000 QSOs out of the noise, of which 900 in RTTY.

Hardware used : Yaesu FT900/AT (thanks Yaesu Europe), Cushcraft R7 (thanks Oklahoma Comm Center), toploaded lowband vertical (thanks to John, ON4UN), AEA PK900 modem (thanks AEA), Kenwood TL922 amplifier, MFJ DSP filter, AEA Morsemachine, Bencher, Daiwa tuner (thanks Leon, ON5TW) and PS430S power supply. Software used : RTTY pileups run with 'RTTY' by WF1B (thanks Ray!), other pileups with 'CT' by K1EA, Pactor and Packet with AEA 'PC Packratt for Windows' (thanks Advanced Electronic Applications). Further thanks go to 'QSL ROUTES Berlin' for sponsoring the cards and Ghis, ON5NT, for handling the QSL chores once again.

Regards from the Philippines

In each continent, there are people who put their antennas higher than the rest. When they call in, others listen. They typically have all the countries worked on each band and they feed their first class equipment to large beam antennas – not just watery dipoles. I guess that's what makes them well known.

One of these people in Southeast Asia is Robin Go, DU9RG, residing in the Philippines. So, we wanted to explore life in the Go family and put DX9C on the air – call our friends around the world and give them a zone 27 multiplier and make a reasonable multi-single score. It was a bright November day when two Northern types were indeed arriving with their luggage at the front door of the Go residence in Ayala Alabang.

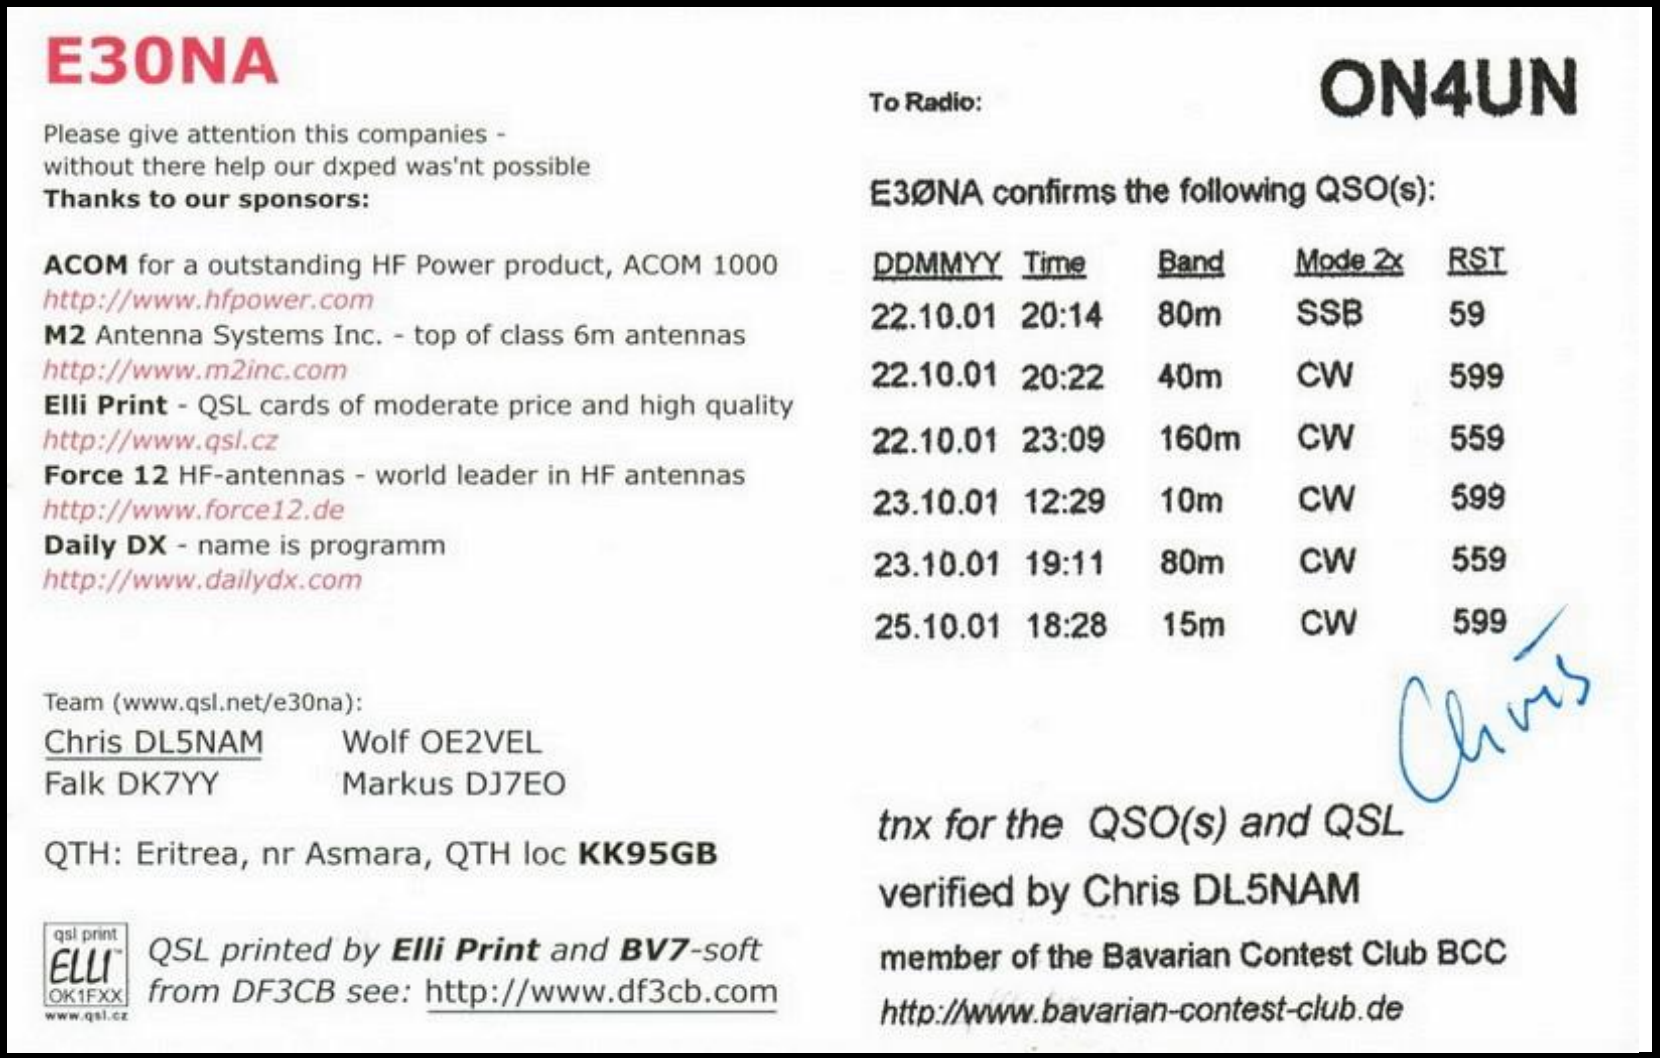

We found Christine, DU3YL and Robin, DU9RG fully devoted to our visit. It was not only that they provided us with first-class operating quarters and a powerful station, but they indeed gave their soul to this weekend and looked after our enjoyment and well-being. It was unique to be so well adopted by another family – so much so that we often forgot that we weren't at home.

We are delighted to share this view of our contest QTH and present the whole group that was responsible for your DX9C QSO. When you next hear DU9RG – pay some attention to it – it is another serious signal from another serious DXer. It is serious because it is built that way....

ACOM 1000 amplifier
Butternut HF9V + HF2V antennas with elevated radials
USB Micro-Keyer by OM7ZZ
Win-Test by F5MZN log

Main island of the Cooks and pleasant tourist hub to visit other islands, Rarotonga was chosen by Michel F6COW, Dominique F6EPY and Radi F6GNZ to start their pacific tour 2004. Although not the rarest DX location, it is a favorite for its relaxed atmosphere and the friendliness of its inhabitants. The Kiikii Motel, with a near perfect location on the north coast and direct departure on sea water, is now a well known QTH which has been used by many DX'ers in the past. Low sunspot and disturbed geomagnetic conditions made us work mainly on the low bands 160m, 80m and 40m with quite good conditions which resulted in many new ones for our fellow european operators.

Special Thanks

Thanks to ACOM Bulgaria and HRO Anaheim for their efficient support in getting equipment in short delays, F5MZN for his superb logging software and Paul F2YT for his very friendly support.

EA8BH Formula Racing Team and year 2000

Entering the new millennium may provide revitalizing opportunities for amateur radio contesting. Following the spirit of the world's premier motorsport – Formula One – the F1 racing team approach was adopted, and a good QTH and needed equipment were selected.

Here at EA8BH, a team of dedicated engineers work hard at technical innovations and station design and make the ***best overall package*** available jointly with the ***world's most skillful drivers.*** In return, the best drivers, backed by team management and ***support personnel,*** gear themselves to cut the finish line first. The concept has worked well and several extraordinary results already speak for themselves.

The team had targeted to capture all major CQ World-Wide Contest records, and the strategy was set accordingly. This included CQWW all-band cw and ssb (N5TJ), CQWW RTTY all-band (N4GN) and CQWW160M cw (OH2BH) records. Here the Formula team worked tirelessly, evaluated and ***maximized all success factors*** and made them jell. The rest was just routine action, and it was no surprise that all past records were indeed outperformed with a comfortable margin.

Yaesu Musen Co. Ltd. is the engine supplier to the Formula team, benefiting from the valuable information that the team provides for Yaesu. The information is used exclusively to help Yaesu supply ***the best radios*** and operating comfort for serious amateur radio operators world-wide.

While the team is Finnish-American-Spanish-Japanese, the actual racing site is located on the African continent at Faro de Sardina, Gran Canaria, ***Canary Islands, Zone 33.***

Here, along the Atlantic Ocean shoreline, an equatorial setting offers a good take-off for EA8BH signals and an ever attractive and inspiring climate for ***further innovations,*** while the team is afloat in the crystal blue but salty Atlantic wiggling their toes, headed for new horizons in amateur radio contesting.

Alexei, ER1FF 73 from Moldova!

"MOLDOVA - ER" Banner Award

"MOLDOVA - ER" banner award is given out for QSOs with amateur radio stations of Moldova in all ER areas: ER1, ER2, ER3, ER4, ER5.

QSO with ER6 - ER0 callsigns equals two ordinary QSOs and any missing area.

To get " MOLDOVA - ER " banner award one should:

- Radioamateurs in Europe need to have 15 QSOs on any HF band including WARC;
- Radioamateurs outside Europe need to have 8 QSOs;
- Radioamateurs on VHF band (50 MHz and higher) need 6 QSOs.

QSOs from August 27, 1993 in any mode can qualify for the banner award. Dupe QSOs do not qualify. Same conditions apply for SWLs.

You should send an application (extract from LOG certified by two radioamateurs) by registered letter to:

P.O.Box 1561 MD2044 Kishinev, MOLDOVA

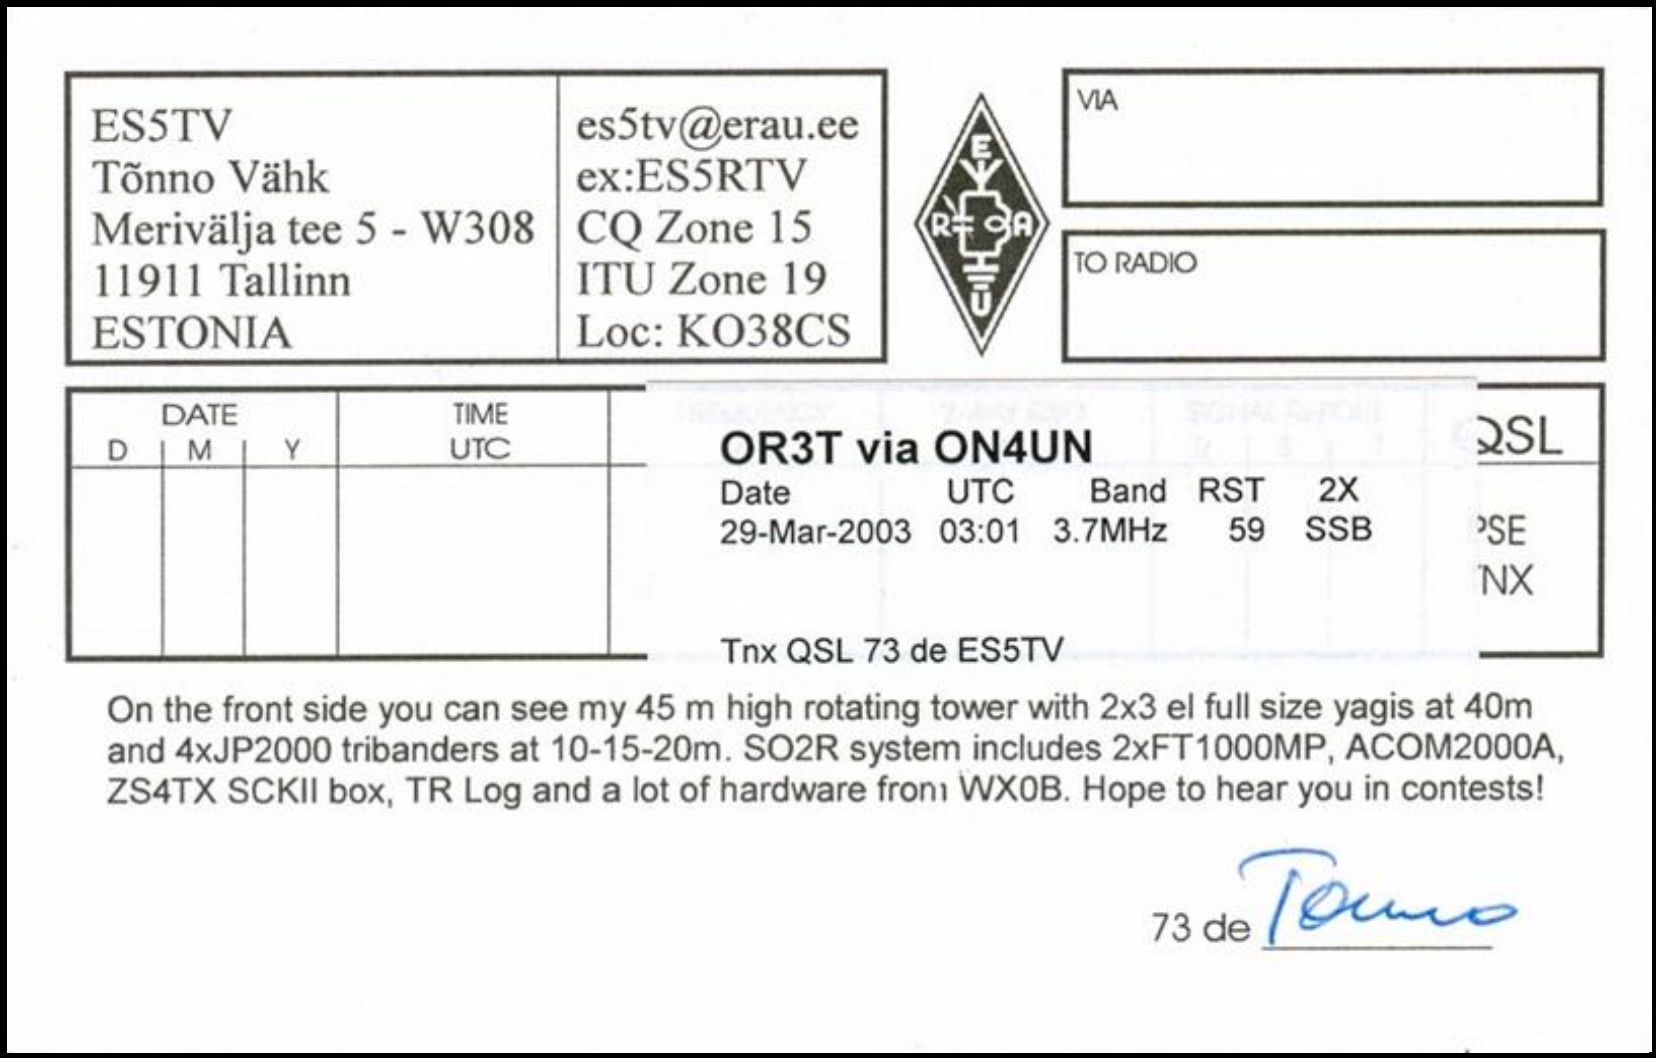

Please include 15 USD or 20 IRC as shipping cost.

St. Barthelemy Island, French West Indies

FIRST DXPEDITION TO NEWLY BORN ST. BARTHS

NEW DXCC ENTITY 338

This latest DXCC entity, St. Barths, meets what many consider an ideal profile of a place in their radio dreams. It is an island only eight miles long and has a small resident population of 8000. It has no casinos or mega resorts but bustles with high-street life on magnificent beaches with wonderful restaurants and fleets of exclusive cruisers.

It was none other than Christopher Columbus who discovered the island in 1493, and the island has been a French territory ever since except for 100 years when it was sold to Sweden in a barter deal. During that period many Swedish words and place names appeared in the local vocabulary — such as the capital Gustavia.

We entered the scene and looked at every corner of the mountainous island to find a clear northern sector preferably at the water's edge. We found one, and with three fishing rods decorating the beach, we were busy handing out 23.340 QSOs in the course of seven days.

This included a Christmas spent far away from our families, so we owe them our sympathy and regrets. It was Hilkka and Leena who encouraged us to go as part of our service to this great hobby. When holding this card in your hand, have them in your thoughts.

To Radio: **ON4UN**

I'm happy to confirm the following 2-way Qso(s):

Santa adding to your DXCC at Christmas!

RADIO OPERATORS — BARTOLOMEO BROTHERS

Olli Rissanen, OH0XX & Martti Laine, OH2BH

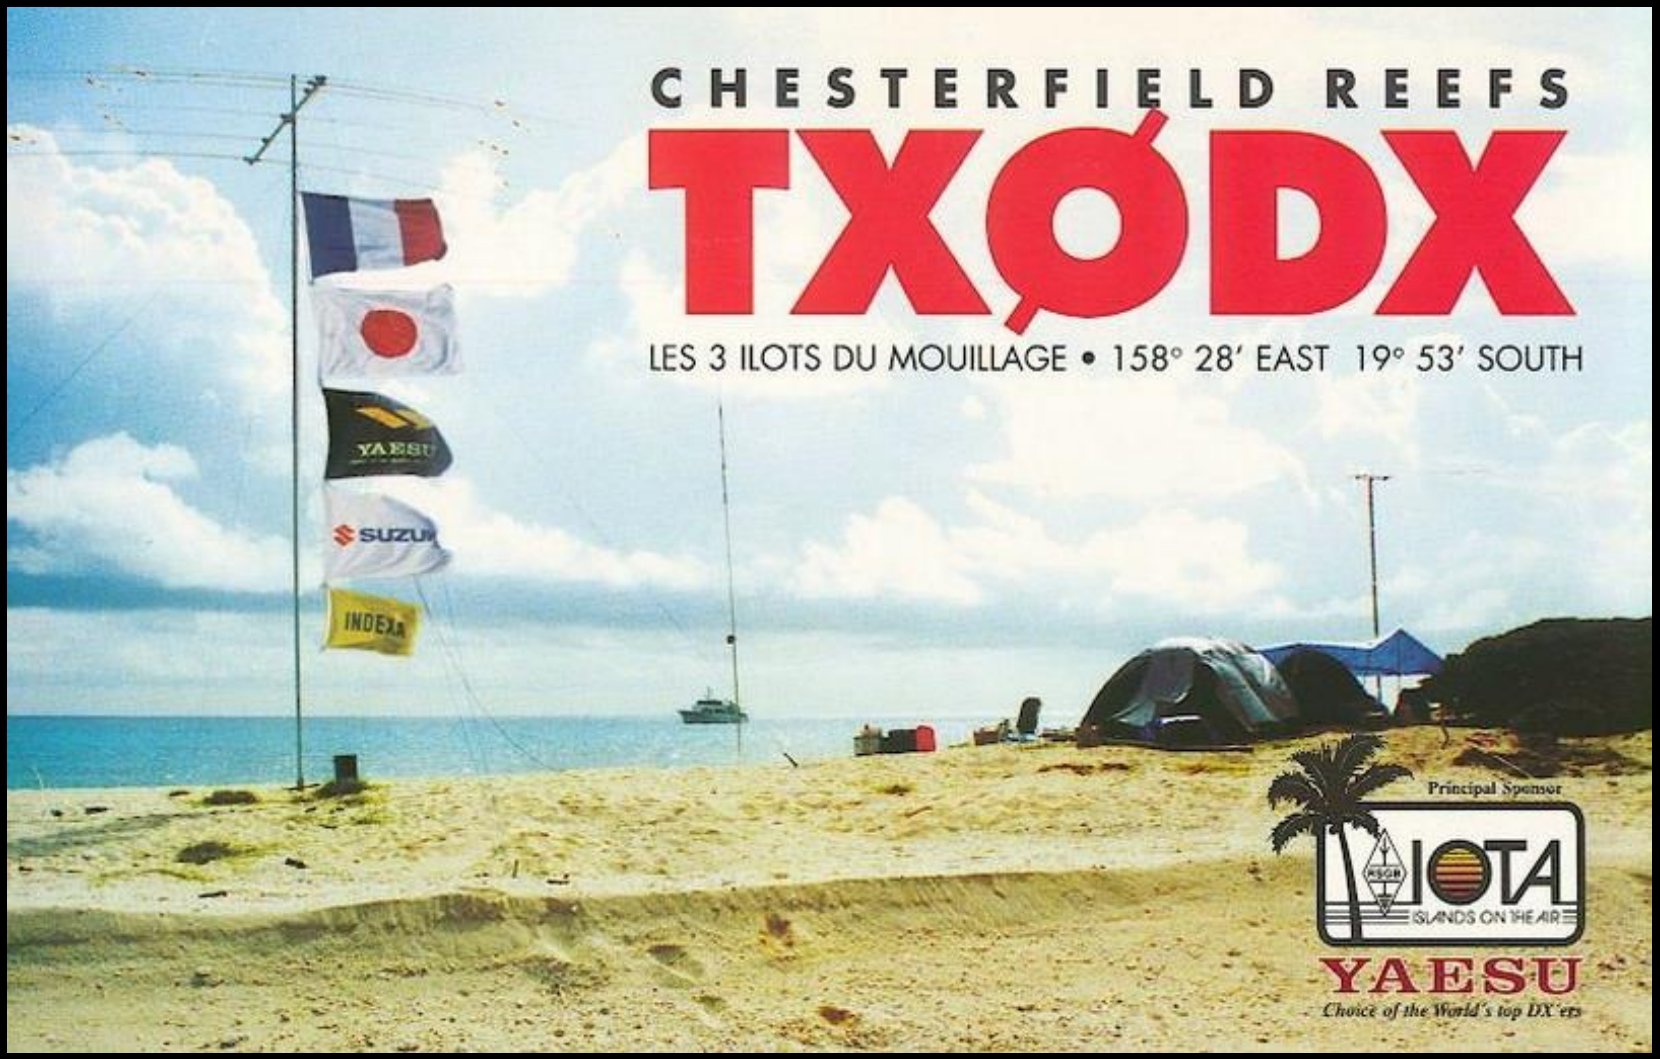

Equipment: Yaesu FT-1000 MkV Field
FT-2000 & FinnFet amps

Antennas: 80/40/20/17M single-wire radiators

On February 21, 2007 the French Ministry issued a decree making St. Barthelemy an Overseas Collective, making its status equal to that of Guadeloupe, Martinique and other French territories on the current DXCC List. The "Event Date" that caused St. Barthelemy to be added to the DXCC List was December 14, 2007, the date the U.S. State Department Fact Sheet was updated by the Bureau of Intelligence and Research.

Hmmm... DXers see and hear and understand new counters very easily that others have difficulty in comprehending...the supporting facts are simple and when one hears them, there is an end to all speculation...DX is!

FOØCI - Clipperton Island DX-Pedition - March 1992

RADIO	MARCH 1992	UTC	BAND	MODE 2-WAY	RPT
RADIO ON4UN		2 WAY CW	ON 03/12/92 AT 0550Z		
URRS(T) 599 BAND: 80					

Clipperton Island (10° 18' N - 109° 13' W; Grid Square - DK 50), located approximately 1500 miles south of San Diego, California, is a flat, barren, coral atoll inhabited by land crabs and various sea birds (the booby and frigate). In 1990, plans were underway to activate the island in early 1991, however, the operation was delayed due to the crisis in the Persian Gulf. In 1991, the expedition efforts continued for an early 1992 activation after the required paperwork had been received. On March 6, 1992, nine operators activated FOØCI with 7 complete stations and made 48,000 QSOs before leaving the island on March 15.

We would like to thank the following for their support prior to the expedition: Mr. and Mrs. Charles Adler, ICE Corporation, Southern California DX Club, National Wire and Cable Co., The Hoosier Contesters, KC6BBQ, KC6WUZ, KD6AYV, KK6DX, KG7DZ, KL7GRF, WA6PJR, W6PQS, KE6OP, N6AMG and N6AGB. We would also like to thank Mr. Pierre Simon of the PTT in Tahiti for his assistance in the processing of our paperwork.

Our greatest thanks goes out to the crew of the M. V. Spirit of Adventure whose expertise throughout the trip allowed the team to enjoy a safe and well executed journey. This included a trouble free landing and departure from the island.

The nine operators were: NØAFW-Pete, WA2FIJ-Jay, N7QQ-Charlie, KA7CQQ-John, GØLMX/F1MBO-Vincent, ON6TT-Peter, N9NS-Mike, PA3DUU-Arie and WA6FGV-Ron.

L'île Europa est la plus importante des îles Éparses. Île tropicale située dans le canal du Mozambique, à mi-chemin entre la côte Est de l'Afrique et la côte Ouest de Madagascar ; elle a une forme grossièrement circulaire. Au Nord-Ouest, un lagon partiellement comblé couvre environ un cinquième de l'île. La flore se compose de palétuviers, d'euphorbes, de filaos et de quelques cocotiers plantés par le service météorologique. La faune est variée. On rencontre d'importantes colonies d'oiseaux de mer, des pailles-en-queue, des zosterops et des flamants roses lors des migrations. Arrivées avec les premiers colons, des chèvres sauvages ont proliféré. Après les pluies tropicales surviennent des myriades de moustiques rendant toute circulation impossible après le coucher du soleil. Pendant une certaine période de l'année, les tortues de mer viennent y pondre.

Europa était déjà connue de la Compagnie des Indes et des premiers Français installés à Madagascar. Elle aurait servi de refuge à des pirates fuyant la Marine Royale. Deux familles réunionnaises tentèrent de s'y installer entre 1905 et 1910 pour exploiter le sisal et l'écaille de tortue. Depuis 1949, une station météorologique est en fonctionnement et procure d'importantes informations pour la prévision et le suivi des cyclones dans le canal du Mozambique, pour la sécurité de la navigation maritime et la circulation aérienne internationale.

L'île Europa est une réserve naturelle française qui génère une zone économique de 127 300 km2 *(source : site du Ministère de l'Outre-Mer).*

Nous tenons à remercier l'état-major de l'armée de terre, l'ensemble des forces armées de la zone sud de l'océan indien mais surtout le général de division Daniel Brulé, son adjoint le colonel Philippe Pontiès, le colonel Christian Cosquer, le lieutenant-colonel Jean-Michel Georget et tous les militaires qui ont oeuvrés pour que cette expédition se réalise.

Tromelin island - Serge Frolow Base IOTA: AF-031 DIFO FR-006

Tromelin island is one of the most remote islands in Indian Ocean. It belongs to the Eparse Achipelago. The ocean depth surrounding the island reaches 4000 meters. Its geographical coordinates are 15 degrees 53 minutes S. and 54 degrees 29 minutes E. **Tromelin island** is completely flat and the sea can be seen from any part of the island. This island is nowadays uninhabited but was inhabited for a while by misfortunate sailors and slaves. The only written record we have on any Tromelin settlement was from the sailors of "L'Utile" an old French battleship that had been converted to a transport vessel for materials and african slaves. It sank after facing a terrible storm in 1761. The crew survived. They managed to built a new boat to reach Mauritius island but the capacity of this boat was limited to 122 people. Ninety African slaves had to stay on the island with the promise of a new vessel coming back to take them away from this hell. We don't know what happened then or even whether the boat reached Mauritius. Apparently, even if the crew did successfully reach Mauritius, they never asked for a rescue boat for the poor slaves still stranded on Tromelin. 15 years later in 1776, a corvette called "la Dauphine" commanded by "the Knight de Tromelin" stopped by this island which was now called Tromelin Island. They rescued the sole survivors which consisted of 7 women and 1 child ; 83 people had perished. They were transported to Mauritius and were given their freedom and pensions.

80M DXCC QSL CARDS ON4UN

The island was named after the British navigator, Captain Samuel Wallis, who discovered it on August 16, 1767. Following his short visit, the island (originally named Uvea) was rarely visited by European until the 1820s. Merchant and whaling vessels plied the waters around the island more and more frequently. Then in 1837 the first missionaries arrived and converted the population to Roman Catholicism. Besides the missionaries played an important role (like on so many other islands in the Pacific) in local society, protecting the inhabitants from abuse or exploitation by the whalers and merchants. In 1842, on request of local authorities in Wallis, French protection was granted. Queen Amelia of Wallis signed the protectorate treaty which was ratified by the French government in 1887. In the same year the kings of Futuna also requested French protection. The French Ministry for Colonies gave the two islands a common entity under the name "Protectorate of the Wallis and Futuna Islands" which was attached to New Caledonia for administrative purposes. Wallis and Futuna became a French Overseas Territory in 1961. It is the only French territory where a native system of monarchy has been allowed to survive.

FRENCH GUYANA

French Guyana's forest, dense and mysterious, is watered by a fan of river spreading out from south to north: Maroni, Mana, Sinnamary, Marouni, Approuague, Comté and Oyapock. A trip up any of these rivers by motorized dugout canoe is far from a luxury cruise, but it's a travel experience that's hard to beat for sheer exoticism. Tourism is on the agenda for development in the near future.

There are approximately 64,000 French Guyanese, who are predominately young. The majority live in the coastal capital city Cayenne. The population is composed of French officials and businessmen, indigenous Guyanese (largely black and Amerindian), French creoles, and a number of Chinese.

3E1DX

Contadora Island, Panama, IOTA: NA-072

Operated by

Stefan Radtke, DL5XX & Swen Taake, DL2BAY & Jelka Samec, S57NW

We decided to return to 3E1DX for the CQWW-CW contest again this year, after enjoying this beautiful island and the wonderful hospitality of Günter, HP1XVH and his wife during CQWW-CW 1996. We knew that we would not be serious contenders with just 2 CW operators and the two point QTH, but we hope that our activating 3E1DX helped you in the contest or provided you with a new band or mode. We had a nice time, and we logged some 13,700 QSOs during our visit (10,000 QSOs were made in CW). We thank you for calling us and we'll see you next year from this or another place.

One year after our DXpedition to Grenada we went to Honduras especially for working on the low bands and in RTTY. Our QTH, the hotel The Last Resort Tornabe lies directly on the beach in the north of Honduras with a free view to Europe, North America and Japan. We operated with three stations simultaneously. From October 18th to 29th we made 25514 contacts totaly, 906 on 160m, 1710 on 80m, 402 in RTTY and 6801 in the CQWW SSB Contest included. We like to give our thanks to Victor and his stuff from the Hotel, Joe - HR2JEP, Wolfgang - HR1WJX, Mr. Donaldo Ernesto Reyes Avelar, all the friendly people from Honduras, German DX Foundation, Europe DX Foundation, Berlin DX Group and last but not least to QSL-ROUTES Berlin.

The Society of Jesus (the Jesuits) is a religious order dedicated to all kinds of the apostolate. Of its 36000 members (1966), 7000 are engaged in mission work; 7000 in education (all levels), and the others are preachers, writers, directors of retreats, young Jesuits preparing themselves for future work, or coadjutor Brothers (6000) helping the priests in every task of the apostolate.
HV 3 SJ is a forward step towards improving communications between the Jesuit Curia and Jesuits in all corners of the World. It is located in Rome, near St. Peter's Basilica, in the extra-territorial zone of the Vatican City.

HZ1AB went on the air in early 1947. The license was a gift from the Kingdom of Saudi Arabia to the U. S. Military at Dhahran Air Base. Since that time, hundreds of thousands of contacts have been logged by nearly 200 different operators. The station is operated and maintained by members of the Dhahran Amateur Radio Club. This QSL card is dedicated to these amateurs, military and civilian, who have kept the station on the air for over 50 years.

When Columbus sighted Dominica for the first time,3 November 1498, he wrote in his logbook: "Dominica is remarkable for the beauty of its mountains...and must be seen to be believed". Waitukubuli, "Tall is her body", is the Indian name for the island that is covered by rain forests, towering mountains, rivers and waterfalls. This, together with friendly and honest people,makes Dominica the NUMBER ONE place for ecological tourism. Learn more about the island on *www.swedom.org*, there you can find all the links you need to make a tour around the island.
A special thank to our hosts, Cloudette and Chris, for their help and hospitality and most of all for the friendship.

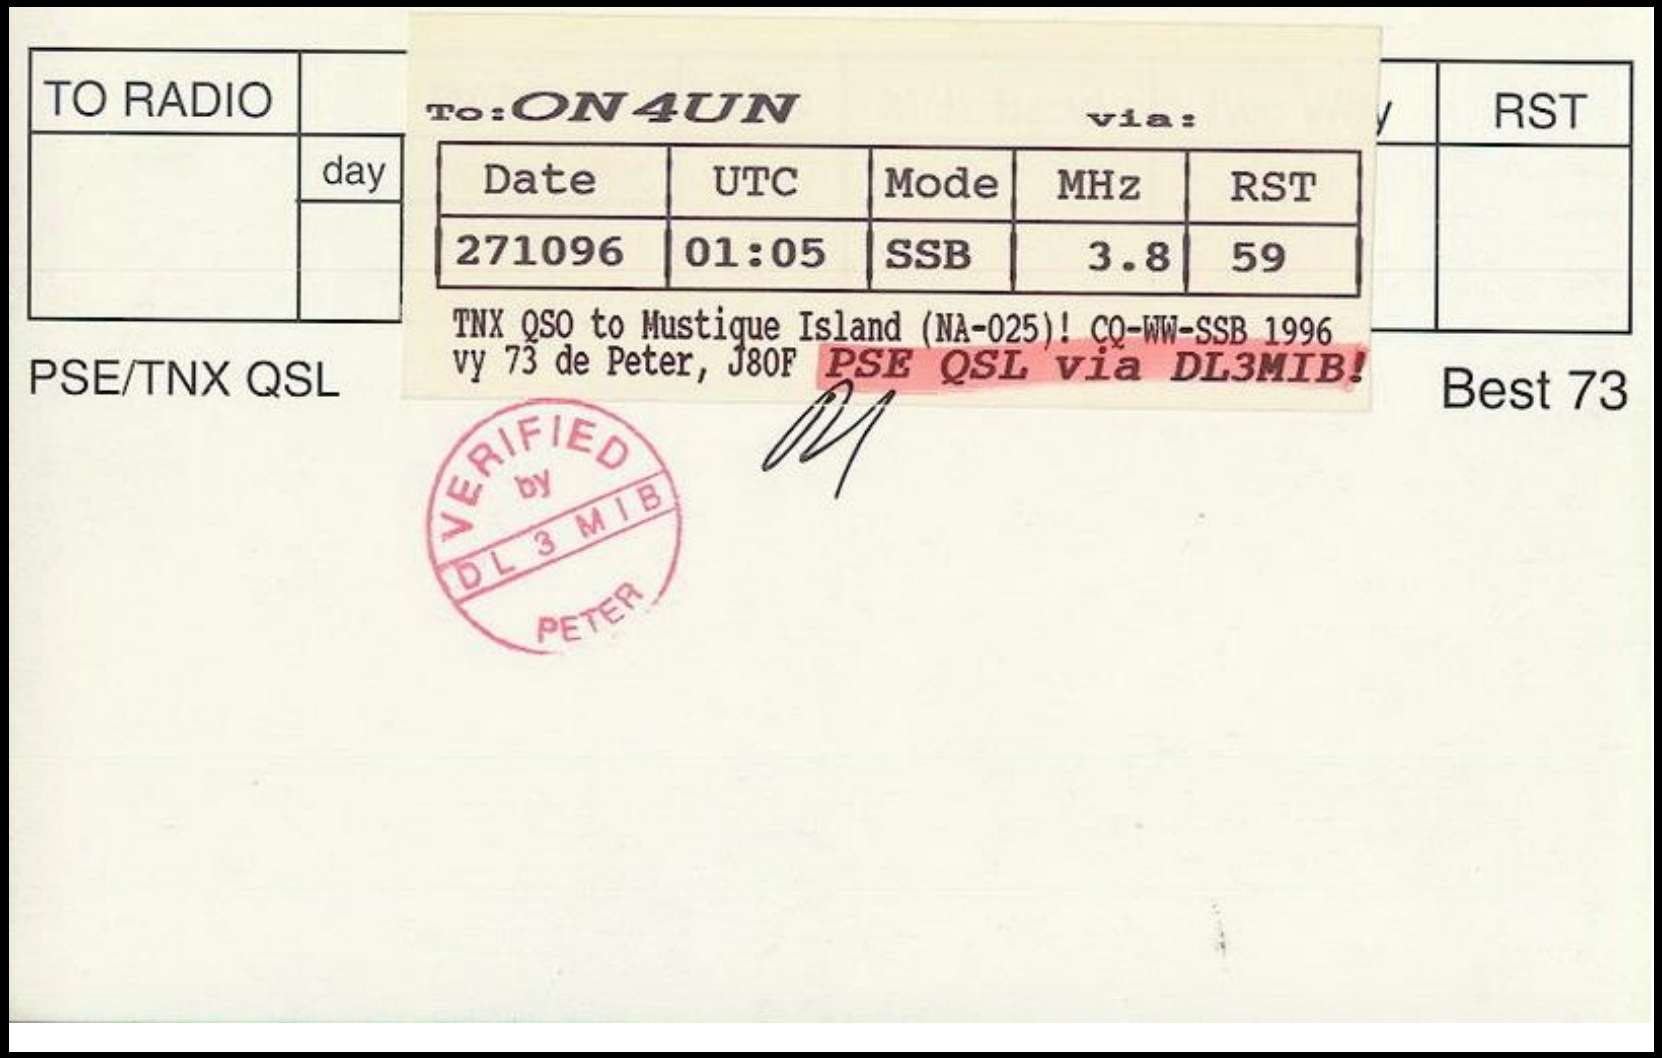

Thanks for the QSO. ALL QSL received are answered.

Station Equipment Used: Kenwood TS450S or TS850S, Cushcraft mono banders, Butternut verticals, Battle Creek Special, Alpha 89 amplifiers, Logikeyers, Heil Boom-mikes, I.C.E. filters.

QSL via: Mile-Hi DX Association, PO Box 1, Franktown, COLORADO 80116 USA.

Howland Island is a National Wildlife Refuge and is managed solely for the protection of breeding seabirds, migratory shorebirds, marine turtles, the coral reef ecosystem, and all forms of native plants and animals. The two wildlife biologists accompanying this expedition as representatives of the U.S. Fish & Wildlife Service were able to collect valuable information about plant and animal populations, and to survey the refuge for signs of any introduction of dangerous alien organisms that might disrupt the ecology of this tropical oceanic island.

Elizabeth Flint, Ph.D., USF&W

80M DXCC QSL CARDS ON4UN

Howland Island is a 400 acre, flat coral island, ½ mile wide and 1 ½ miles long, located roughly 50 miles north of the equator and 1700 miles southwest of Hawaii. It is uninhabited and vegetated only by grasses, vines and low growing shrubs due to scant rain fall, constant wind, and scorching heat. It was claimed by the USA under the Guano Act of 1856 because of the phosphate rich guano deposits which were mined until 1878.

During the mid- to late 1930's, Howland Island was colonized with young men brought from Hawaii. It was during this time that the first amateur radio operation took place from this location (K6BAZ, KF6JEG, KF6SJJ, KF6OWR to name a few).

Howland Island was to be the destination for Amelia Earhart when she departed New Guinea in 1937 on her round-the-world flight. She was to land on the hurriedly completed airstrip there. However, she and her navigator, Fred Noonan, never arrived. To this day, their fate is still debated.

During World War II, Howland served as an American air base as did nearby Baker Island, 40 miles to the south.

Since 1974, Howland and Baker Islands have been part of the Pacific/Remote Islands National Wildlife Refuge complex, overseen by the Fish & Wildlife Service of the Department of Interior. Entry is by special use permit only. The AH1A DXpedition team included two wildlife biologists from the US F&WS who studied the sea- and shorebird population on Howland and Baker during the AH1A operation.

The AH1A crew of ten operators and two wildlife biologists boarded the 70 foot schooner Machias at Christmas Island, Eastern Kiribati. It was to be the team's home for the seven day sail to Howland Island, 1140 nautical miles to the west (1300 statute miles, 2100 km). The team members became acquainted during the cruise as well as being familiarized with computerized logging and the Kenwood TS850 and TS450 radios.

A stay on the island of 9 days had been planned, however it was extended to 15 days due to bad weather brought on by weather patterns known as El Nino. Howland Island is surrounded by a narrow fringing reef, and access to the island is only over the reef in small landing boats as there is no dock. Rough surf and high seas prevented the team's departure from the island and prevented the support vessel from reliably supplying the team with food, water, and fuel. During the final six days on the island, survival techniques of gathering water from giant clam shells and rainwater for drinking was necessary.

A stormy and very rough three days were required to sail from Howland west to Tarawa, Kiribati. Three enjoyable days were spent on Tarawa awaiting the once weekly flight to Honolulu.

This Howland Island operation was the culmination of well over a years' planning by K9AJ & WØRLX. Significant pre-trip work was also done by W9IXX (power), KØEU (equipment), and WØCP (sponsor liaison). We believe this to be only the second operation from Howland Island since World War II, the first being in 1988. Over 52,000 QSO's were made by the AH1A team.

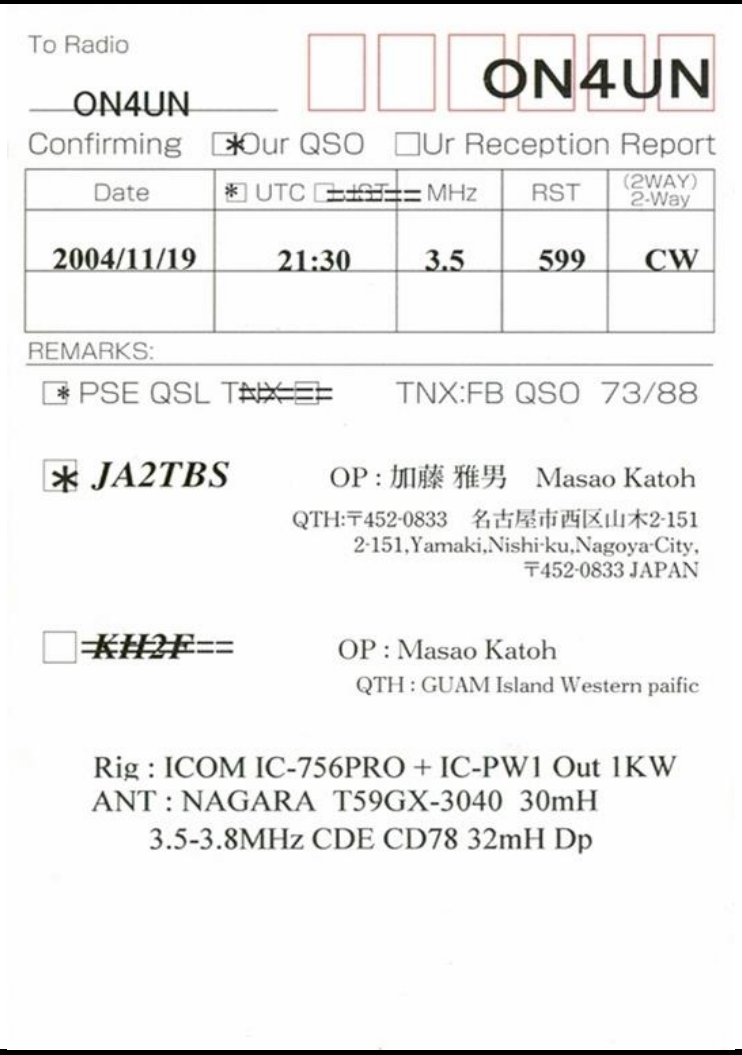

Our sincere appreciation:

- for equipment support: Alpha/ETO, Butternut, Cushcraft, Kenwood, W6EL propagation software, WF1B RTTY software, AH6FS, AH6IO, AH9B (OklaCommCtr), Battle Creek Special antenna (K8GG, W8UVZ, WØCD), K9AY, KGØE, N6AMG Memorial Group (K6MYC & K6QXY-6 meter gear), NH6UY, WH6BC, W9KNI (Logikeyer), W9SU (ICE Filters), Panamax, K9EID (Heil mics), Casio.

JOHNSTON ATOLL is located 717 miles SW of honolulu. it is one of the most isolated atolls in the world. Slowly sinking, it rests on the core of an ancient volcanic island now buried under a limestone cap thousands of feet thick. 30 years ago, Johnston Island was 60 Acres in size. Major dredging and filling operations have made the island, now 600 Acres, to appear like a very large aircraft carrier. As a national wildlife refuge and sanctuary for many rare species of tropical birds, home for about 1200 US military and civilian personnel, and site of the first commercial sized chemical weapons disposal facility, Johnston Island has become a model of man-controlled ecological balance. The climate is marine and tropical in nature with little variation in temperature, moderate rainfall, and predictable NE trade winds.

Dr. Ron Thomas
BSI Services Midway Island

Midway Island was chosen by KD7P for a multi-single assault on the world for the 1985 CQ WPX SSB Contest. The Island was chosen as the ideal QTH for three reasons: Inactivity from the island making it high on the "most wanted list," availability of a new prefix (NH4), and midway between the two greatest amateur populations in the world, U.S.A. and Japan.

We left Barbar's Point Coast Guard Station on March 26, 1985 on a United States Coast Guard C-130 aircraft arriving on Midway Island late in the afternoon with a short stopover on Kure Island (KH7). We were given permission to operate on Midway Island by the U.S. Navy, billeted in ITT housing and operated from the MWR Building.

The Station set-up was: Kenwood TS-830S, VFO-230, AL-80A Amplifier, Nagara Tri-band Beam for 10-15-20, and Dipoles at 40' for 40-160.

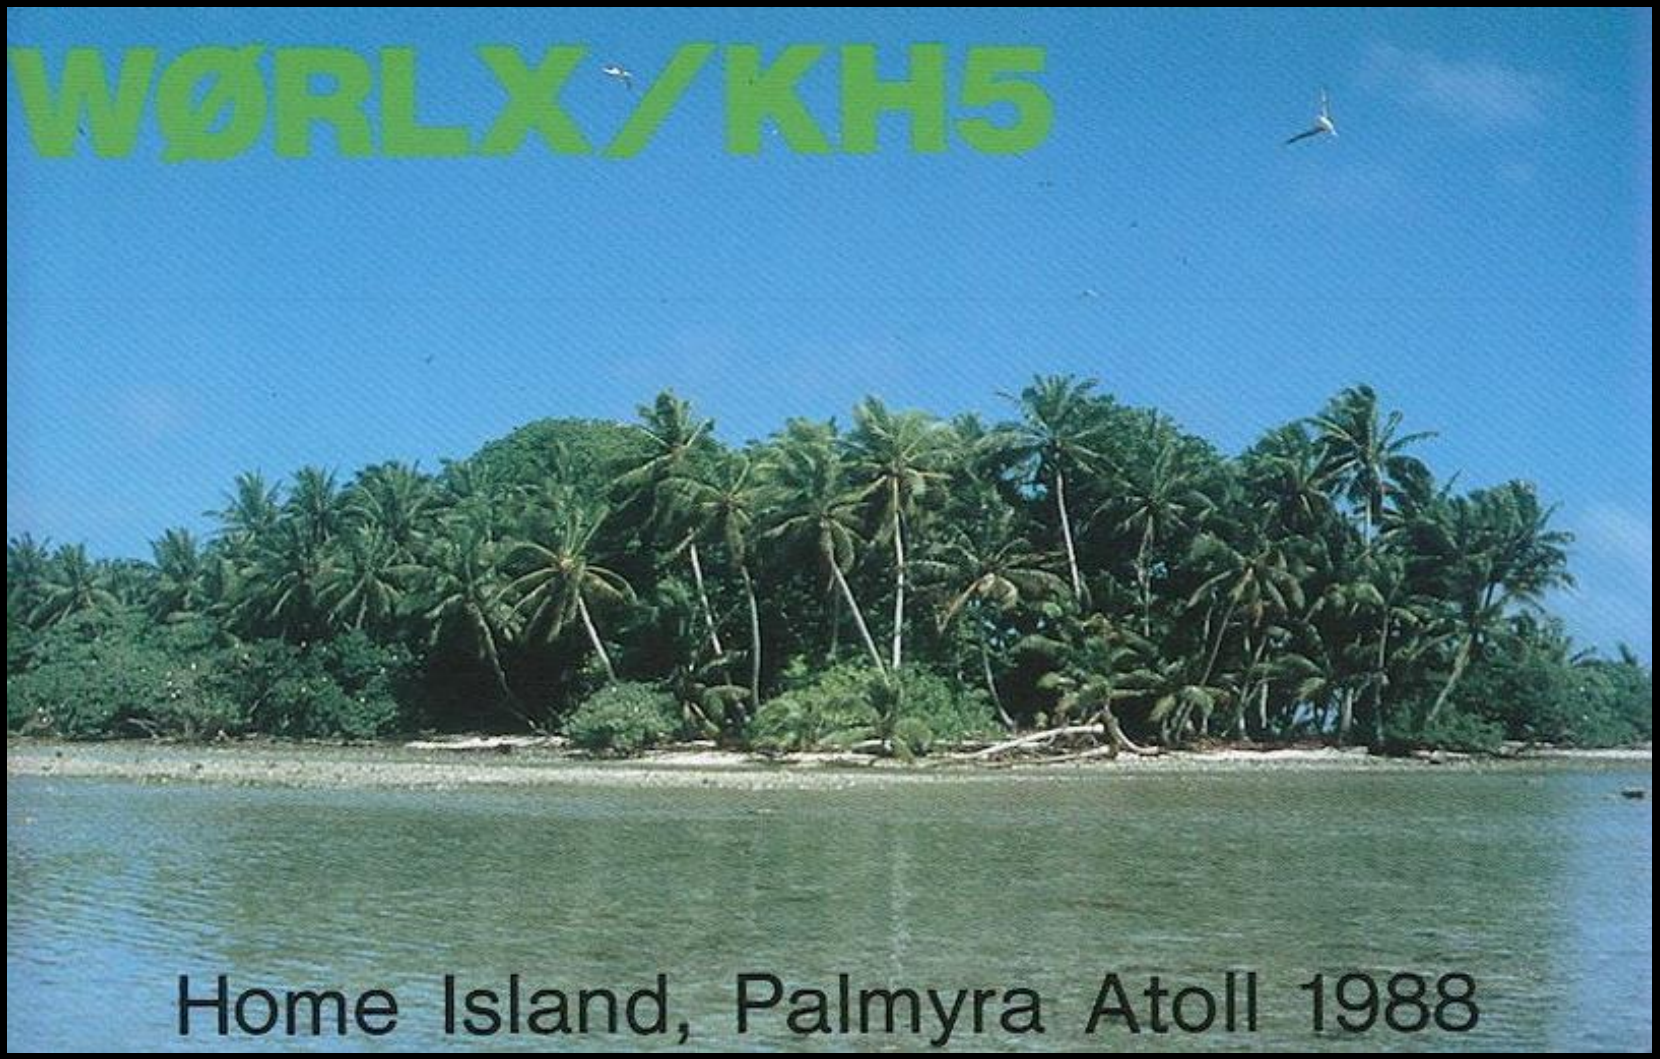

We set a new Multi-single record for CQ WPX SSB Oceania, and were number ONE multi-single in the world for 1985. We made 23,000 QSO's, worked 135 countries, and were active on all bands with special attention to 40-160 meters.

Support for the "Midway Island DX-Pedition" came from the Heard Island DX Association who donated the Tri-band beam left on the Island, Prime Instruments-AMERITRON who donated the AL-80A Amplifier which performed flawlessly for 18-24 hours daily without rest at 1 k.w. output, Ham Radio Outlet, W6RJ, WB6DSV, K6YRA, N6HL, WØZV, and numerous other amateurs, the Northern California DX Foundation, and the Northern California Contest Club. BUT, most of all thanks to amateurs throughout the world for making our DX-Pedition a success.

80M DXCC QSL CARDS ON4UN

Palmyra Atoll is located at 5 degrees 53 minutes north latitude and 162 degrees 05 minutes west longtitude. The atoll consists of a number of small islands in a U shape with the entrance to the lagoon being to the west. It is a beautiful Pacific atoll 360 miles north of the equator and is privately owned. Discovered in 1802 by the American vessel Palmyra the islands were a military base during World War II and a copra plantation after the war. It is a wet tropical spot teeming with hermit crabs and coconut trees and is the nesting place for thousands of seabirds, including sooty terns, fairy terns and boobies.

Home Island is at the southwestern tip of the atoll facing the lagoon to its north and the Pacific Ocean to the south. Access to Home Island by water is limited to high tides, although the operators did carry a considerable amount of equipment by hand at low tide. The airfield on Cooper Island is covered with nesting terns and the wreckage of an aircraft which crashed in 1980 during an earlier Palmyra DX-Pedition lies just to the southeast of the runway.

In 87 hours 15,022 contacts were made including 504 on 160 meters and 58 on rtty.

The operators wish to acknowledge support from The Northern California DX Foundation, Inc., The DX Family Foundation of Japan, The Clipperton DX Club, The International DX Foundation, the European DX Foundation, Yanmar for its loan of two generators which never failed and Citizens Watch Company.

Thanks are due to JA1ACB, KK4LM, HB9RG, TR8CR, W5FS, Long Island DX Association, Northern Illlinois DX Association, Mile Hi DX Association, F6CVR, Club DX 24, LA DX Group and REF 33 for significant financial donations.

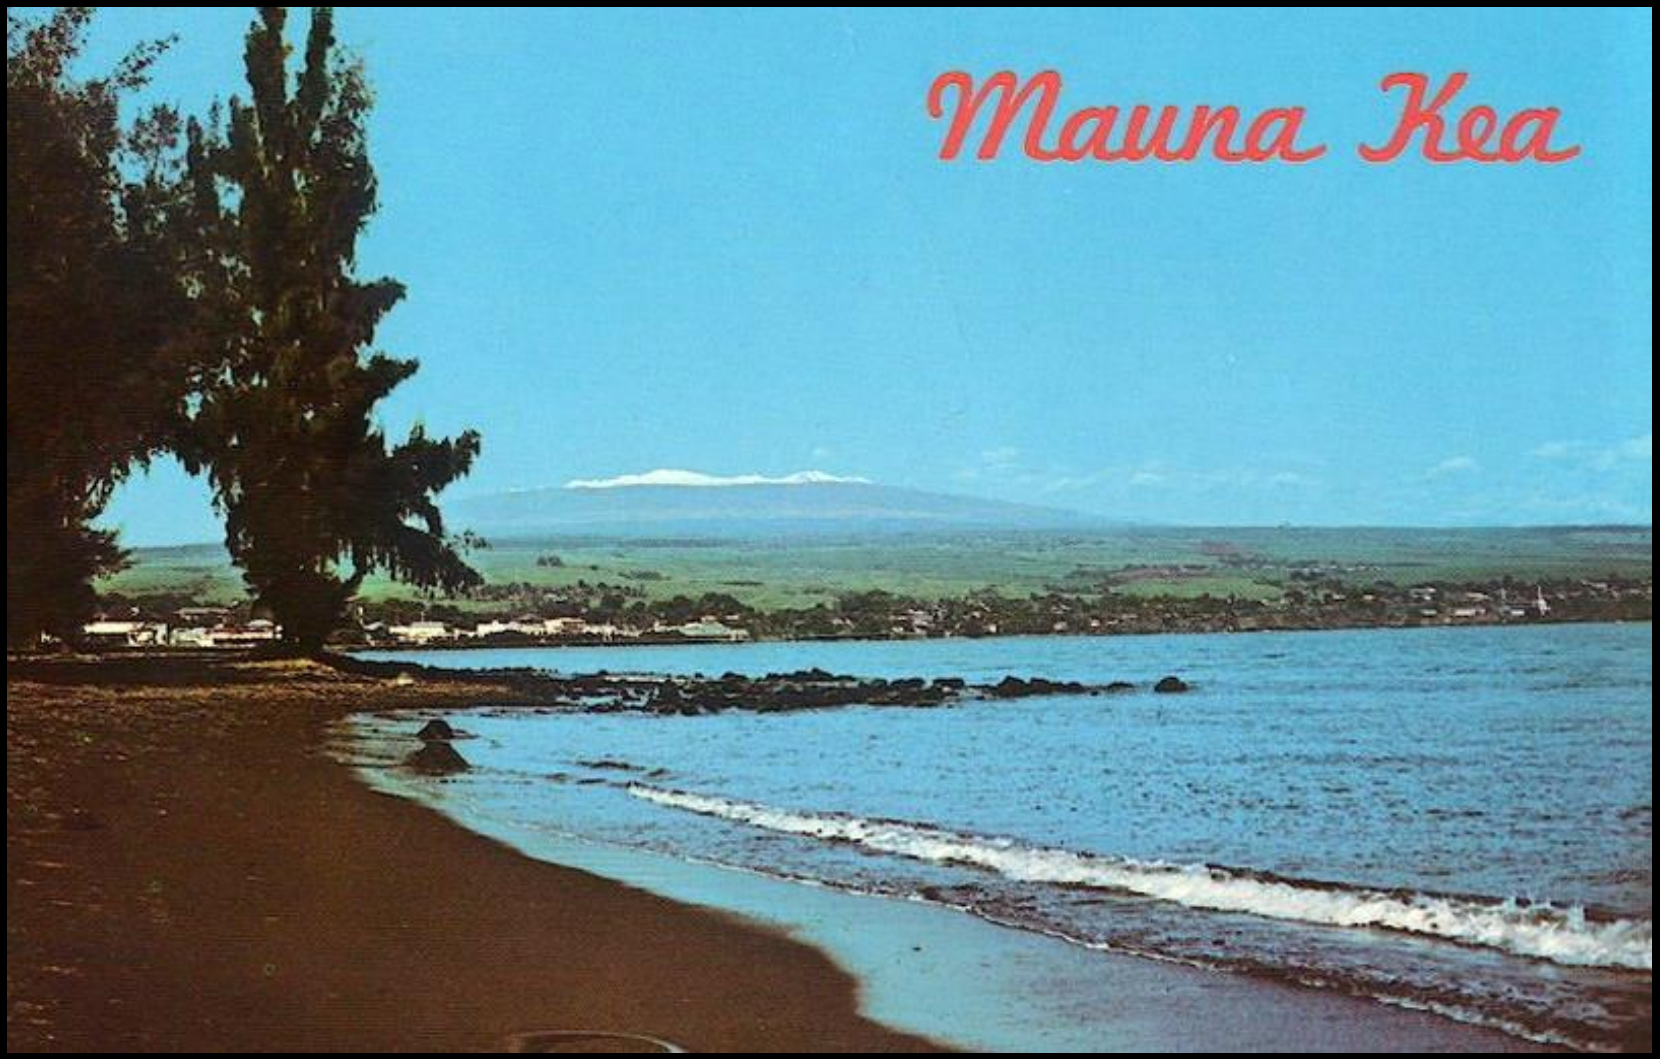

Thanks also go to N2IC/Ø, WØZV, WØUN, KDØRW, N2AIR, N6AHV, W8UVZ, W8KKF, W9UCW, W9YYG, K9GX, JR1AIB, JH1HGC, JA7RHJ, JE1JKL, AF2C and T32AN and to W6DU and W6OAT for their assistance and support.

Thanks for hospitality and other support are due KH6CC, KH6OR, KH6BZF, KH6LJ, KH6XX and W6HTH/KH6.

Last, but not least to the wives and families of the operators go our thanks for their loving support. We always knew they were concerned about us and we love them.

SWAINS ISLAND DXPEDITION

4-17. April 2007.

IOTA: **OC-200 (11°05'S 171°05'W)**

Zone: **CQ-32** **ITU-62** WW Grid: **AH48kw**

Swains island is unusual as the atoll is an unbroken circle of land and as such it features a lagoon closed off from the sea. The fate of such a lagoon depends on the amount of rain. No rain: it dries up; some rain: it changes into a small, strongly saltwater lake; lots of rain: it changes into a freshwater lake. The latter has happened here.

* * *

Grateful Thanks to:

The 1978 Navassa Island DX-Pedition was operated from 26 November to 3 December 1978; 22303 SSB and CW QSO's were made. Our thanks to each of you who made this possible. We hope we were a new country for you on a new mode or band.

Operators: Randy Rowe, NØTG; Dave Bowker, WØRJU; Myron Kern, WØZH; Tony Trice, ADØP; Joe Markowski, NØWL; Sy Adler, K2KA; Miles Brown, W2PAU; Joe Duffin, W2ORA; Dave Johnson, WA4SSU; Jon Lindsay, W6OIG.

Recognitions: Our sincere appreciation is hereby expressed to the following organizations who have directly supported the DX-Pedition: Atlas Radio, Northern California DX Foundation, Long Island DX Association, McDonnell Douglas Amateur Radio Club, Virginia Century Club, Rookies Amateur Radio Club, Southeastern DX Club, St. Louis Area Teleprinter Society II, St. Charles Amateur Radio Club, Egyptian Radio Club, Gateway Chapter Ten-Ten International, Suddeutsche DX-Gruppe, St. Louis Suburban Radio Club, Mid-Mo Amateur Radio Club, Mississippi Valley DX and Contest Club, and the organized Japanese support via JH1VRQ.

Special thanks to the following for assistance in promotion: W1VV, W1WY, WB1DGD, K2AA, W2GHK, W2IYX, W3HNK, WA3HUP, K4IIF, WA6AHF, WA6AUD, N6JM, W6VPH, W7OK, N7RO, W9MXC, KØDQV, WØDU, WBØMSZ, DJ9ZB, JH1VRQ, LU2AFH, VK3AKK, VU2CK, ZS6IW, 6Y5LA and to the many others who cannot be recognized due to space limitations but without whom the DX-Pedition could not have been a success. Thanks to all.

Contest Team: John Ellis NP2B, John McHugh KU4GY, Bruce Phegley W4OV, Julio Ripoll WD4JNS

St. Croix is the largest of the three U.S. Virgin Islands. The picture on the front is of Buck Island, a small, uninhabited island, and a U.S. National Park, one mile north of St. Croix. Christopher Columbus discovered St. Croix in 1493. Many buildings in downtown Christiansted date back to the early 1700's.
We were delighted with sunny weather in the 80's, clear blue Caribbean waters, fabulous scuba diving, and the flavor of Caribbean people, food and music.
Special thanks for John NP2B & Jeanette NP2C for hosting the CQ WW Contest team.

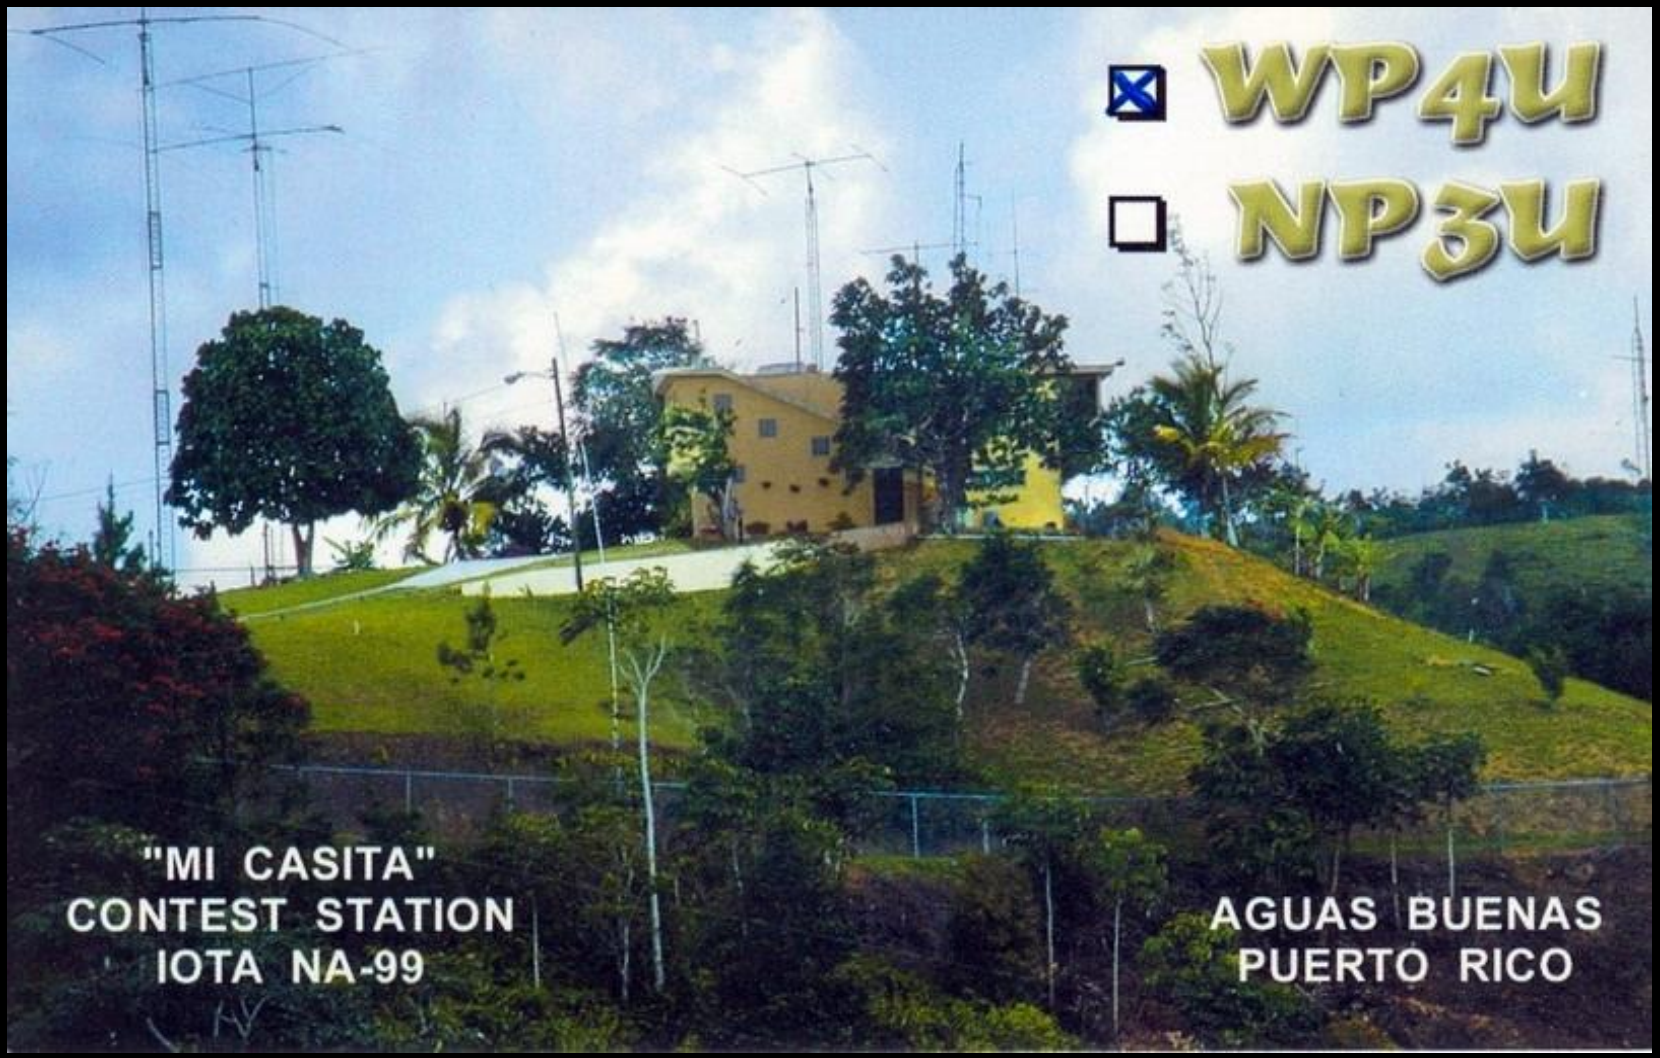

Contest Statistics: SSB, Multi-single, QSO's: 4,645, Score: 5,739,552 points.

Equipment: Ten Tec Paragon & Kachina & Icom 706 MKII tranceivers, Ten Tec Titan amplifier
Antennas: Hygain Explorer 14 & Cushcraft A-3 (3 element yagis),
40m/80m dipole, 160m long wire & 160m WA7UQV Balloon Antenna.

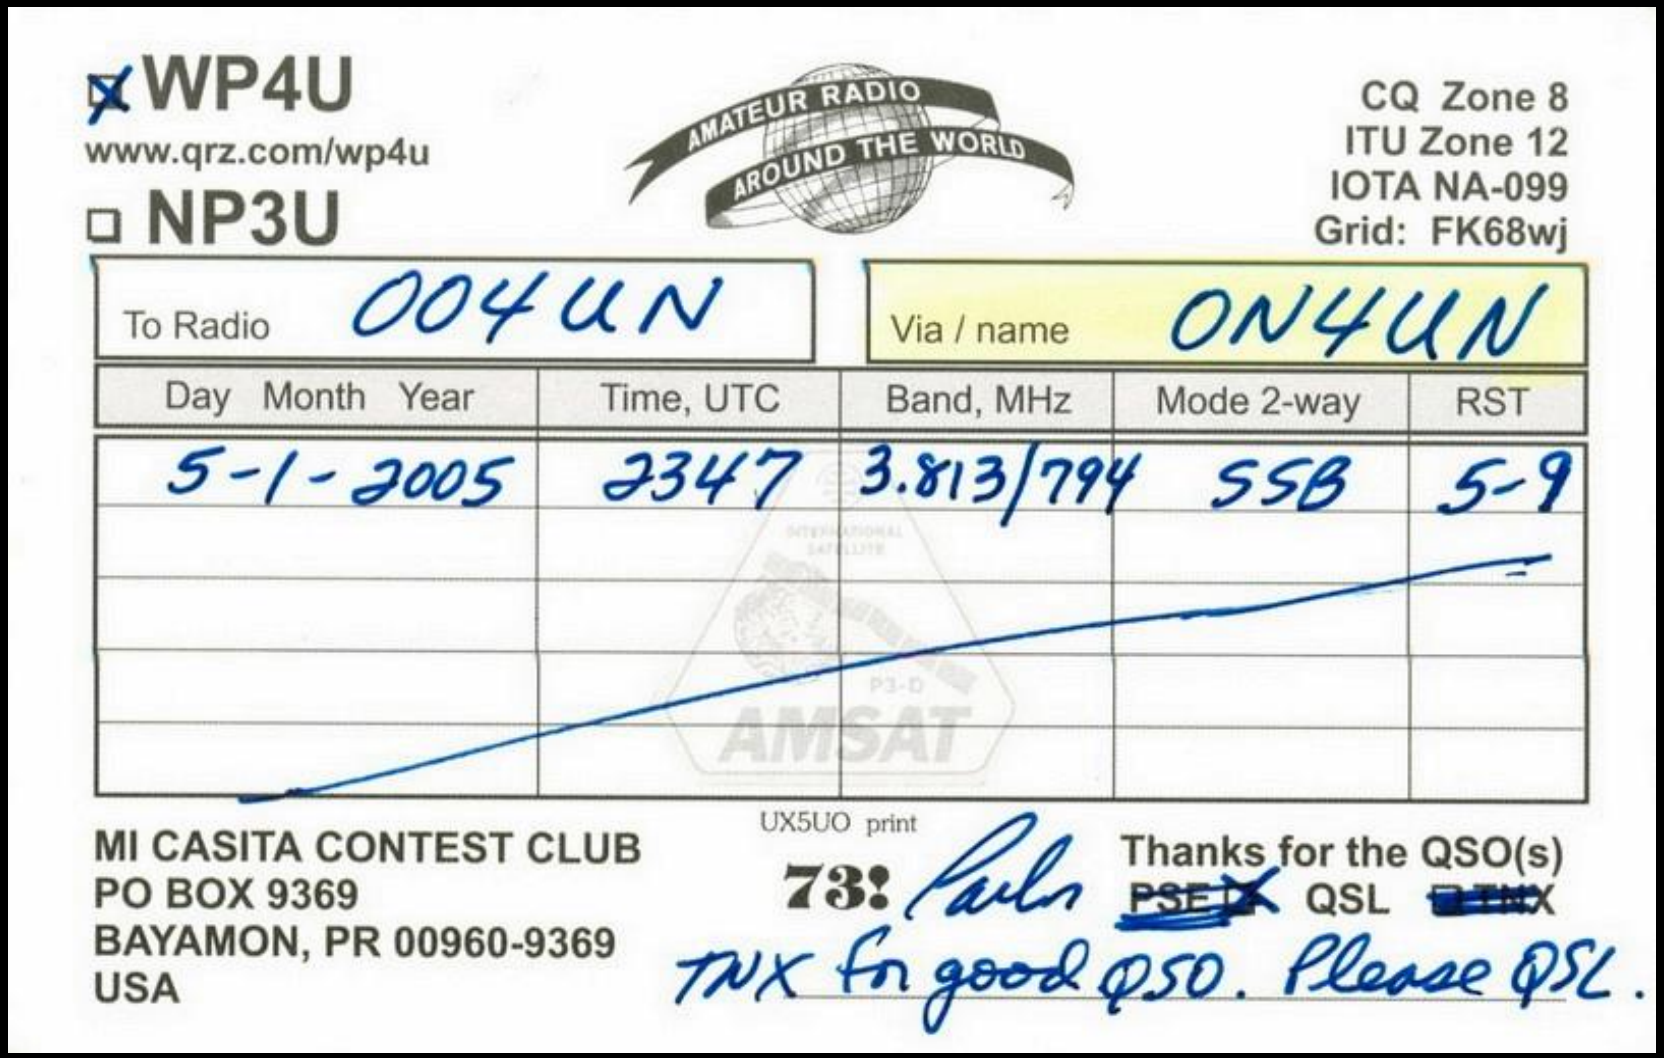

Our sincere thanks to our families for their love and support.

TNX for the QSO and hope to see you on our next DXpedition from ...?...

IT HAPPENED IN THE NORTHERN VILLAGE OF ARCALA

Once upon a time a bunch of serious contest types gathered around the fireplace to figure out whether they had done their share in traditional Amateur Radio, and to have a serious look at some new ways of going about it. Their idea was to make new technologies work on young people's terms so that the potential renewal of Amateur Radio could be conducted with the contesting art as their spearhead — elevating it all to an Extreme Sport — using extreme concepts so as to get young people involved with it and hopefully to jump onto the bandwagon.

They decided to push their envelope to heights never seen before and go for some extreme targets; one was to change the order of South and North so that European records would travel to the Far North. They are well on their way, but still ask scientists to predict once again whether there might be yet another cycle. In the meantime, they wanted to benchmark the South by taking EU records under their belt from the Azores as CR2X. And then to beef up their frozen tools to match and exceed.

Adding to the highly advanced OH8X station with seven towers, they soon tackled the job of challenging the low bands by introducing some needed tools — both electrical and mechanical — to design what is the largest amateur radio antenna on Earth.

Front: Arcala mammoth was erected to a towering height of 100 meters (330ft) with its 4-L on 80m and 3-L on 160m and 4-over-4 on 40m.

OJ0X & THOSE FOUR WEEKS IN STORMY SEAS

A 4-week OJ0X operation was to be our modern approach to DXpeditioning with well planned weekly team changes. But Mother Nature put it back to a traditional format with great adventure and fun that an always unpredictable sea can provide.

The first outing got stuck and those who were to build the infrastructure were sent home and the next team took over. All teams had to struggle with the sea and tricky landings as no jetty could withstand the onslaught of the rolling waves. The right place was sought in a sufficiently calm corner of the reef for safe landing.

Testing the men and their ability to cope with team dynamics, everyone had to be responsible not only for himself and his team-mates but also the next team plus the few who had never seen amateur radio in motion sharing the same small quarters. Here the men were separated from the boys.

With our 66.595 QSOs we wanted to do a professionally run show and entertain our audience on radio and, with our daily web postings, share the ups and downs always present in life. www.qrz.com/db/OJ0X

With our SteppIR beam left standing at the lighthouse, you with the right spirit and a sharing and caring approach may be the next one at Market Reef to be caught in the limelight of DXing — being the star of the best show in town. Many have left their heart in their DX location — as we did.

The first Danish lightship was positioned in 1829. **LIGHTSHIP XXI**, built from oak wood in 1911, was the last that was built without a propelling engine. Moored with a 180m chain, she served at many different locations until she was retired from active service in 1988. She was then the last lightship in Danish waters. Her first radio was installed in 1912, – the radio beacon in 1935. Today Lightship XXI is part of a museum for Danish wooden ships formerly in public service.

The chief attraction of the museum is the all oak frigate »JYLLAND«. It was built in 1860, and is the world's longest wooden ship. Now completely restored and equipped with an astonishing number of original artifacts, it is one of its kind among museum ships all over the world.

PJ2T - CARIBBEAN CONTESTING CONSORTIUM

HTTP://WWW.PJ2T.ORG

CURACAO, NETHERLANDS ANTILLES

Thanks for working our station! Each year since 2003, PJ2T has been the most-logged callsign in amateur radio, worldwide. We've been fortunate to have collected many contest plaques and set scoring records. Thanks for your QSOs that have helped our club reach this goal. Our QTH, called "Signal Point," is adjacent to the former Coral Cliff Hotel (now Sunset Waters). Our station is the site of the famous PJ9JT operations of the past 30+ years. The PJ2T callsign is used for our contesting efforts; non-contest operations use callsigns like "PJ2/"home call." The callsign whose QSO this card confirms appears below.

With towers of 100, 80, and 54 feet and multiple monobanders covering 6, 10, 15 and 20m and a 40m yagi at 107 feet, PJ2T can simultaneously beam toward Europe and the U.S. for contest operation. Wire beams and beverages serve on the low bands. Indoors are four fully equipped KW stations with an Ethernet network and DSL Internet connectivity. QSL Manager for PJ2T is N9AG or LOTW. The station is available for rental when it's not being used by club members. For rental info, contact ghoward@kent.edu.

YAESU
Choice of the World's top DX'ers

On 10 October, 2010 the Netherland Antilles ceased to exist as a country. Out of the new political structure, four new DXCC entities were born – Bonaire was one of these. For 10 days in October 2010, an international group of operators activated Bonaire as PJ4D celebrating the new DXCC status putting nearly 34,000 QSOs in the log. The PJ4D team: K6AM, N0VD, PE2KY, PE2MC, PG4M, PJ4NX, W4PA and W0LSD. QSL via W3HNK.

DXpedition to the new DXCC entity of Saba/St. Eustatius

Organized by the Southeastern DX Club (SEDXC)

Operators:

K4SSU, K4UEE, K4ZLE, K5AC, K8EAB, KØIR, KU4V, N4GG, N4HH, N4LR, N4NX, VE7CT, VE7XF, W4GKF, W6IZT

This new DXCC entity was created as a result of the dissolution of the Netherlands Antilles on 10-10-10. The two islands of Saba and St. Eustatius are now considered one DXCC entity due to their close proximity. We chose Saba as our operating site due to the uniqueness and beauty of the Island. It is a rocky volcanic island with a single road. It is located between St. Maarten and St. Eustatius and is five square miles (13 sq. km) in size and a population of 1400. There is excellent scuba diving, snorkeling and hiking making this tiny spot in the Caribbean a mecca for eco-tourism; see www.sabatourism.com. It has earned the moniker "The Unspoiled Queen". Saba has one of the shortest commercial runways in the world. Landing and take off from there is not for the faint hearted! For more information see www.pj6a.com

The Netherlands Antilles voted to split into smaller countries on 10-10-10. The five islands of Bonaire, Curacao, Saba, St. Eustatius, and Sint Maarten had been planning this change for several years. Our focus was to help Sint Maarten celebrate this momentous occasion, and while doing so, we were able to activate a new DXCC entity.

CW and SSB stations were set up on two locations on different sides of the island. We used ICOM 7600 radios, Alpha 8410 amps, and DX Engineering, SteppIR, and Hex-Beam antennas. There were other equipment sponsors and we appreciate everyone's support.

The team consisted of 13 highly skilled, very experienced operators. Putting a new country on the air was an opportunity that none of us had experienced before. We are most appreciative of all sponsors, donors, crew, and the support team. It took everyone's effort to execute this operation.

FERNANDO DE NORONHA ARCHIPELAGO

CQ ZONE 11 • ITU ZONE 13 • GRID SQUARE HI36 • IOTA SA-003

Fernando de Noronha is an archipelago of 21 islands and rocks of volcanic origin, located about 345 km (215 miles) off the Brazilian coast, just south of the equator at 3' 54" South and 32' 25" West. The islands were discovered by the Portuguese in 1501 and later occupied by the Dutch and French. The Portuguese reclaimed the islands in 1737, and established a permanent settlement. Currently the population is about 2000, and it has been declared a World Heritage Site by UNESCO. Most of the island is a National Park, and protection of the ecology is a high priority. The view on the front of this QSL is looking North from the PSØF location. The peak on the left is volcanic, and rises 321 meters (1,052 feet) from the ground.

Andre Sampaio, PY7CW, became the entity's first resident amateur when he moved from Recife to the island in late 1987 as a government employee. Now famous in DX circles as PYØFF, Andre is responsible for nearly 100,000 QSO's over the years. Andre owns a restaurant and pousada on Noronha, and was our host when Jim K9PPY and Bill W9VA, visited the island in March 2009 as PSØF. Andre's well equipped station includes mono band yagis for 6, 10, 15, 20 and 40 meters, and inverted V's for 80 and 160 meters. The station is also active on VHF, including Satellite. PYØFF also operates beacons on 6 and 2 meters.

PSØF 2009 made about 4,600 QSO's in the ARRL International Phone DX Contest and another 6,500 QSO's outside the contest.
Also a special thanks to Jim PY7XC for our PSØF license, air travel and hotel arrangements in Recife.

TNX to all who worked us.

QSL via W9VA and LOTW.

ST. PETER & ST. PAUL ARCHIPELAGO

February 12-16, 2001

ITU Zone 13 • CQ Zone 11 • IOTA SA-014 • GRID SQ HJ50 • WLH LH-0003

Operators: Jim PY7XC (Team Leader), Ciro PY7ZY, Ely PT7BZ and Andre PYØFF

The PWØS DXpedition team extends their sincere thanks to the Brazilian Navy, SECIRM, and especially CMG Tarcisio Alves de Oliveira, Brazilian Navy coordinator of the activities of the St. Peter & St. Paul Archipelago for their permission and support that made this operation a reality. SECIRM maintains a scientific base in the archipelago, where it sponsors ongoing research of the geology, biology, oceanography, meteorology and fishing activities in the area.

Thanks to all of the DXers whose thoughts and patience were with the team as they fought three days of very rough seas before they were able to safely land. Once there, continual high winds, lightning and rain threatened their operating site and created problems for generators, antennas and other equipment. The team persevered, and succeeded in putting 7,300 QSOs in the log in just under 50 hours of operating time. All bands from 160 to 6 meters were active, and QSOs were made on SSB, CW and RTTY. Further details may be found on the web at www.soutomaior.eti.br/mario/paginas/dx.htm.

In addition to the sponsors whose logos are displayed, the team extends their sincere thanks to JA1WSK, PY2XB, PY7ZZ, PY7HL, PY7IQ, PY1RO and W8GC for their generous support of their efforts. A very special thanks to Bill, W9VA, who assisted in many ways to help the team in Brazil accomplish its objectives.

The operators in the insert picture are, from left to right, Andre PYØFF, Jim PY7XC, Ciro PY7ZY and Ely PT7BZ.

Operators: Andre PYØFF (Team Leader), Fred PY7ZZ, Herminio PY5HSD, Ciro PY7ZY, Peter PY5CC, Ely PT7BZ, Rolf PY1RO, Jim PY7XC, Bill W9VA and Dick N6FF

The PWØT DXpedition team extends our sincere thanks to the Brazilian Navy, especially Captain Paulo de Tarso S. Rocha and the Crew of the Mattoso Maia, for transporting us to the archipelago, and Commander Elmo Guimarães Ribeiro for the hospitality afforded us during our stay on the island. A very special thanks to Dr. Cleofas Uchoa who was key in obtaining Navy permission for our visit to Trindade. Also special thanks are extended to Atilano de Oms PY5EG who provided critical government relations.

In addition to the sponsors whose logos are displayed, the team extends our sincere thanks to the many individual contributors that made our DXpedition possible. Special thanks to Dennis K7BV, Andy W6/G4VPM and our pilot stations Carl N4AA, Rod WC7N, Toshi JA1ELY and Duncan ZL3JT. Visit the website for DXpedition details: www.trindade2002.com.

SURINAME FACT SHEET

Location and Physical Features: Surinam lies on the northeastern coast of South America, bordered by French Guiana to the East, Guyana to the West, and Brazil to the South. The Interior highlands are covered by dense tropical forests, intersected by rivers. The southern border region is savanna. The highest point is 1,225m (4,120ft), in the Wilhelmina mountain range.

Area: 163,265 sq km (63,036 sq miles), Population: 425,000 (1992), Capital: Paramaribo

Language: Dutch is the official language, but English is widely spoken: Sranan Tongo, the lingua franca is spoken by almost everyone. Also spoken in Surinam are Sarnami Hindustani and Surinam Javanese as well as several Creoles and Amerindian languages.

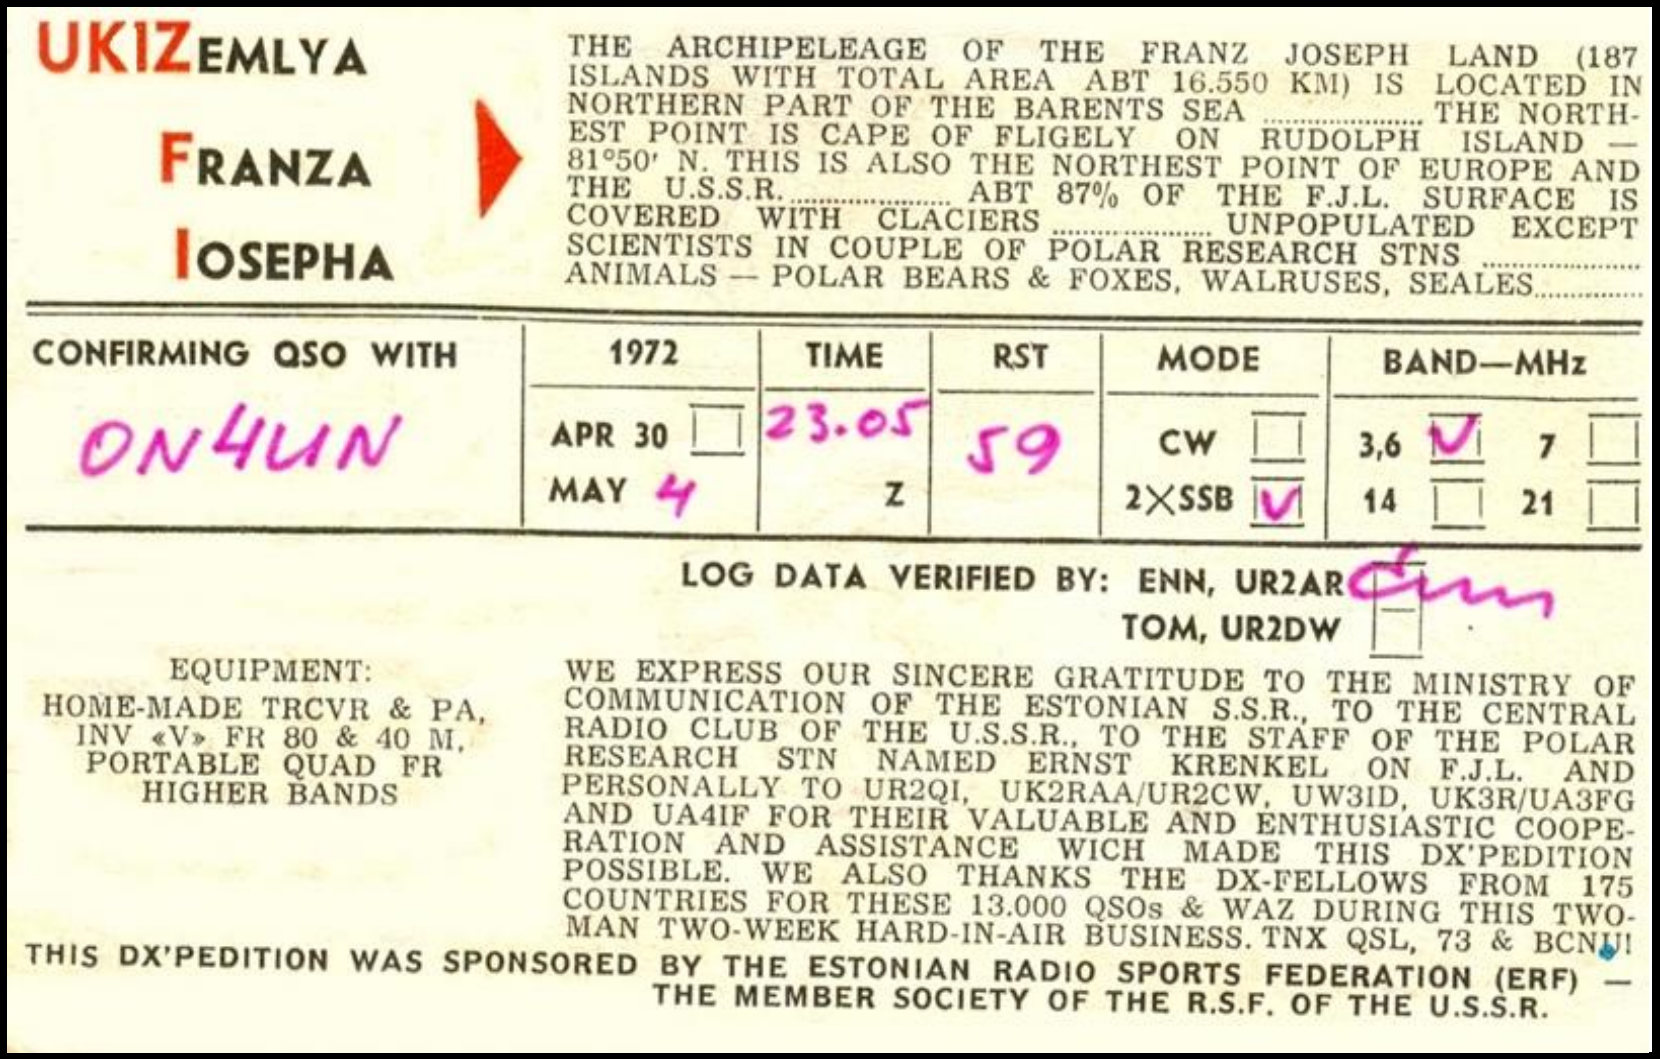

Religion: The main Christian denominations are the Dutch Reformed Church, the Moravian Church and the Roman Catholic Church. There are also Hindu and Islamic congregations (about 27% and 20% of the population, respectively).

Climate: Tropical climate, outside the hurricane zone. Temperatures range from 21–32 degrees Celcius. There is little seasonal change. The warmest months are September and October.

80M DXCC QSL CARDS ON4UN

The Saharan Arab Democratic Republic or RASD — formerly Spanish Western Sahara — was formally proclaimed on February 27, 1976 in Bir Lehlou. To date, the RASD has been recognized by 70 countries and it is the 51st member of the Organization of African Unity (OAU). The country is bordered on the north by Morocco, on the south and sotheast by Mauritania and on the east by Algeria. The physical character of the area has many faces, ranging from vast stretches of desert to green oases from worthless sand to valuable phosphate deposits.

The first DXpedition to the RASD was supported by the Ministry of Information under the patronage of President Mohammed Abdelaziz. The purpose was not only to activate the RASD but to establish Amateur Radio there as a human link between the Saharaui people and the rest of the world. The first Saharaui operator, Naama SØ1A, is now fully trained to carry on this mission and to further develop the Unión de Radioaficionados Saharauis, SØRASD.

We wish to thank the Sharawi people for sharing this unique experience with us and for showing such remarkable hospitality and friendship. It was a memorable exprience to enjoy a camel ride and a Sharawi fiesta, contrasted by a sudden sand storm and an awsome display of lightning blazing across the skies of Sahara at night.

La República Arabe Saharaui Democrática — RASD — ex colonia española del Sahara Occidental, fue proclamada el 27 de febrero de 1976 en Bir Lehlu. En 1975, fue ocupada por Marruecos y Mauritania en virtud de los acuerdos de Madrid del 14 de noviembre del mismo año. Los acuerdos fueron proclamados no válidos por la comunidad internacional, a comenzar por Mauritania que firmó el 5 de agosto de 1979 un acuedo de paz con la RASD. Miembro número 51 de la Organización para la Unidad Africana (OUA) desde 1982, es reconocida por 70 estados (Diciembre 1987).

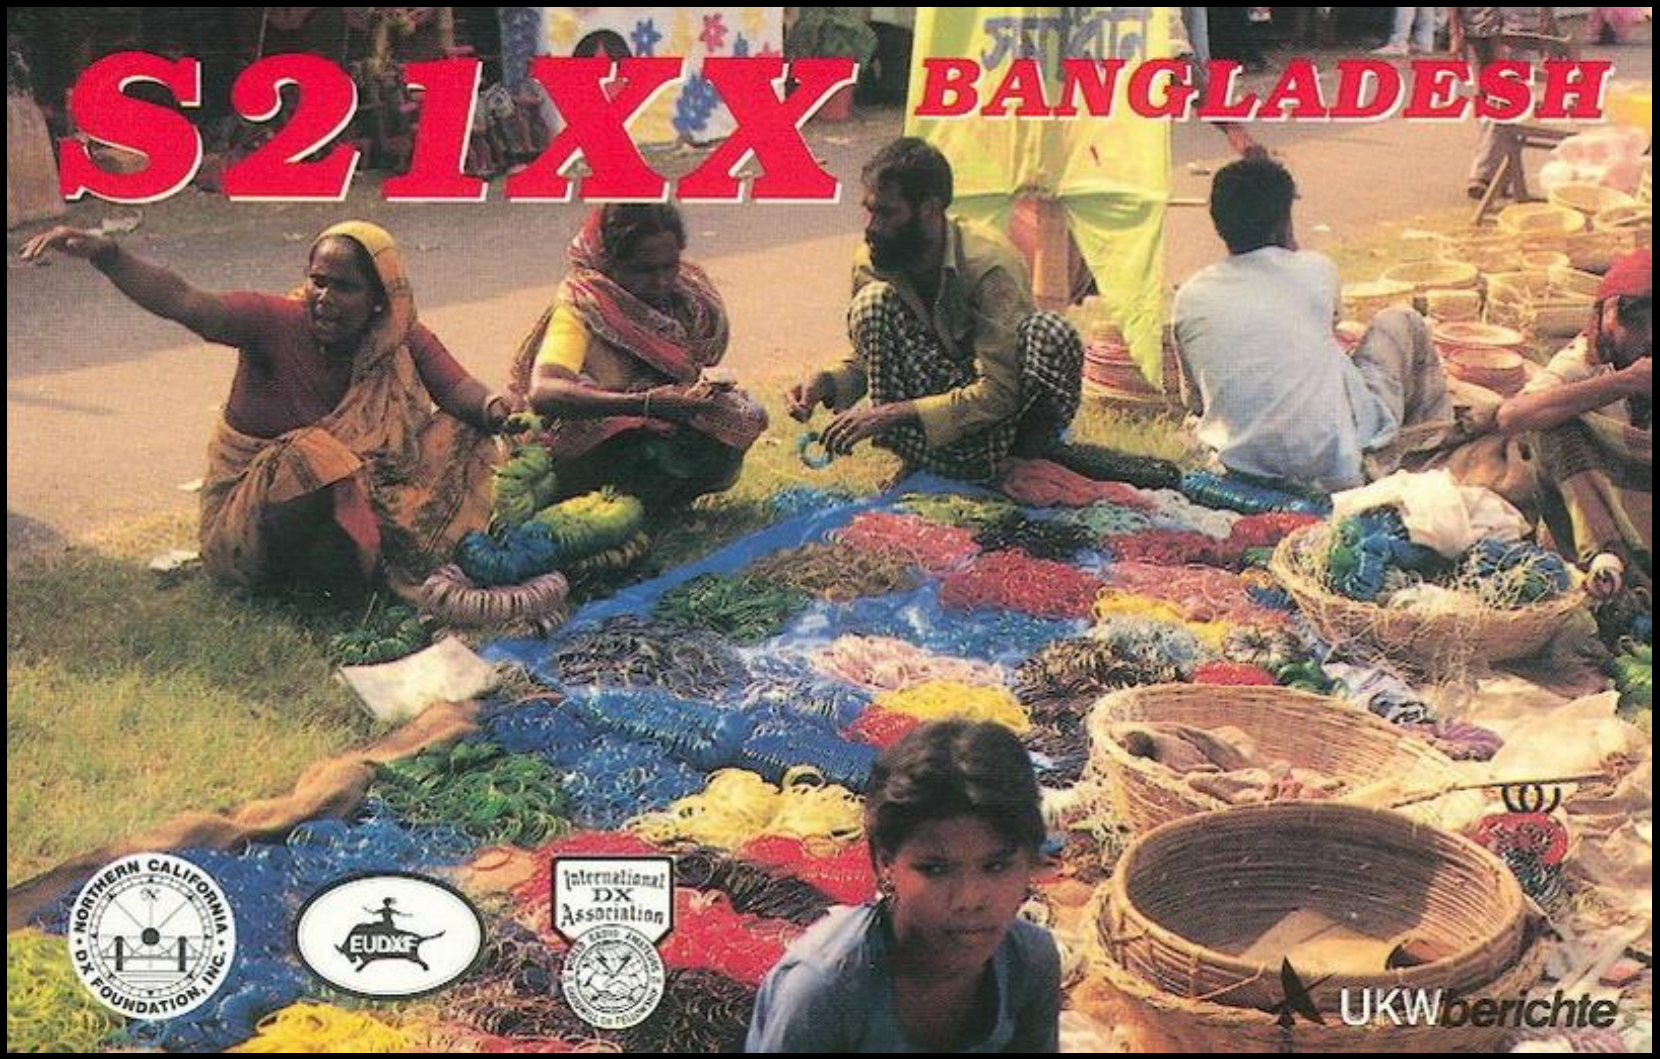

La superficie de la RASD es de 284.000 Km² y la población de alrededor de 300.000 habitantes. Limita al norte con Marruecos, al sur y sureste con Mauritania, al este con Argelia y al oeste con el Océano Atlántico.

Esta primera DXpedición llevada a cabo en la RASD, fue posible gracias a la asistencia del Ministerio de Información y con el patronazgo del Presidente Sr. Mohamed Abdelaziz. El propósito de la DXpedición, no fue solamente el activar la RASD, sino también, el establecimiento de la Radioafición en este país y crear así un importante lazo de unión entre los Saharauis y la comunidad internacional. El primer radioaficionado de la RASD es el Sr. Naama Zeine-Eddine SØ1A, que además de estar muy activo en las bandas, es el encargado de poner en marcha la UNION DE RADIAFICIONADOS SAHARAUIS, cuya estación Club opera con el indicativo SØRASD.

Deseamos agradecer al Pueblo Saharaui su extraordinaria hospitalidad y amistad, y además, la inolvidable experiencia de disfrutar montando en los camellos y en una fiesta saharaui.

Nuestro agradecimiento a todos cuantos han colaborado de una u otra forma para la que la radioafición haya sido posible en la RASD y la SØRASD continue en el aire y especialmente a: JOSE ANTONIO IBAÑEZ DE GARAYO EA2AJH, LYNX DX GROUP, ARBEKO SA BILBAO, D.S.E. Bangladesh, „the land of the bengals" is a delta of 55,598 square miles formed by the rivers Ganges and Brahmaputra. Our operation took place from a remote village north of Dhaka, the capital of the republic. At the present bottom of the sunspot cycle we decided to operate mainly on the low bands and in the CW-mode. That's why we installed a 66 ft. high top-loaded vertical antenna with elevated radials – our special low band gun – and six more other antennas. Living two weeks in our peaceful resthouses with a wide garden and running up to three transceivers by power supply from a 7 kW generator, we had a really good time there. The outstanding success, the many visits by friends at our QTH and the fine hospitality of the landlord made our stay a memorable one. The log was closed with 12.839 QSOs, more than 150 countries and 923 top-band QSOs, a few of them even with North America straight over the pole.
We gratefully appreciated the great support by the officials of the B.A.R.L. Lastly, thanks to all of your for unforgettable pile-ups.
73's, see you on the next trip operation.

SIGNIFICANCE OF REPUBLIC OF SAO TOME AND PRINCIPE IN GULF OF GUINEA

The tiny island republic of Sao Tome and Principe with its 180.000 people is peaceful, friendly, and quite small. Making the society jell, and getting its people and their lives organized, should be easier than managing an enterprise. This republic is among the smallest in the world, but the people there have interesting times ahead of them as 2005 begins.

Sao Tome's most valuable export is cocoa, but its production has been falling for a variety of reasons, leaving a large percentage of the people unemployed. But it seems this small country has suddenly come to hold a strategic position in the oil-rich Gulf of Guinea, from where following the movement of oil tankers and guarding the operation of drilling platforms would be easy to accomplish. It is also expected that billions of barrels of oil lie hidden only 100 meters below the shores of Sao Tome. For now, these beaches provide a favorite occupation for people — sitting at the water's edge and watching the endless sea...but that is about to change.

Production is already well underway in the Gulf, benefiting countries like Nigeria and Equatorial Guinea. Recent estimates indicate that the Gulf of Guinea could soon account for up to a quarter of U.S. oil imports. Soon the pumps will arrive in the Economic Zone of Sao Tome, shared with neighboring Nigeria. The past relationships of this former Portuguese colony (ex-CR5) with China, North Korea and Cuba will soon be only part of the republic's 30-year history. Here the challenge is to make sure the income from royalties is distributed democratically to benefit the nation. The money is targeted to go to education, health, and building the infrastructure so as to create jobs and a modern society.

It is assumed that the first step should be protecting democracy and safeguarding the overall stability of the country. There have been outbreaks of civil unrest, most recently a year ago. But today's entire military, maintaining the order in Sao Tome's society, consists of only a few hundred men. Most of them look barely 18 years of age. In 2004, U.S. officials prepared a report on how to restructure Sao Tome's army, and gave away one boat as a starting point for their Coast Guard.

But debate is well underway to make sure that the distribution of this newly discovered wealth will serve national interests in the best possible way. It can be challenging to become suddenly rich. The President envisions his country as a commercial hub and a fiscal paradise, boasting the biggest port in the Gulf of Guinea; his vision includes a scenario of floating supermarkets, golf courses, and thriving eco-tourism.

He who lives long enough will see the final outcome of the transition. In the meantime, obtaining a visa to enter Sao Tome has become increasingly difficult, and bringing in radio transmitting equipment raises eyebrows. But S9A and S9BB were permitted to proceed and give you a Sao Tome QSO. Let's all hang on to these S9 QSOs and see how the newly born republic of Sao Tome makes things flourish.

80M DXCC QSL CARDS ON4UN

S9A & S9BB NOV. 18th — DEC. 3rd 2004

Are you ready for a bit of African magic? Weekly 9-hour flights serve this island nation from Lisbon, Portugal. When you fly to an unknown destination in Africa, anything can lie in store for you.

Upon your arrival, a tropical equatorial climate waits for you, along with 180.000 very friendly people. The island is surprisingly clean, and its original nature and people remain unassailed.

We operated from Marlin Beach Hotel in Sao Tome, with an open sea toward the Northern Hemisphere. An ideal radio location with uninterrupted voltage generators serving the resort. The hotel staff were friendly, and necessary allowances were readily available to hoist our antennas in close proximity to the swimming pool area. The hotel management were eager to see radio success from their grounds. See www.bom-bom.com

During 12 days of operating, some 25.000 QSOs were made, 5000 in the CQWW DX Contest by Pertti OH2PM, using the slick S9A callsign, a special gesture from Sr. Fernando J. Paquete da Costa of the local telecom authority. Heavy lightning and continuous tropical S9 static crashes were a killer on 80/160 meters. Only a handful of QSOs were made with those breaking through the noise and frustration.

All in all, Sao Tome was a positive experience–one would most likely return to S9-land. This expedition was made possible with the kind help of Charles, S9SS and Lesley, S9YL, together with Mike, K7IR at SteppIR and our equipment provider YAESU (Vertex Standard Co. Ltd.)

Banaba Island is located at Lat 0 52'S, Lon 169E. 2480 Nautical miles (6422 km) southwest of Havaii. A 6 km skull shaped island claiming its highest point at 86 mts. Once rich in phosphate, the deposits where mined out by the British intrests from 1900-1979. Britain declared Banaba part of the Gilbert and Ellice protectorate in 1900. The japanese occupied Banaba during WW II and deported the inhabitants but when peace came the British decided to resettle all 2000 inhabitants in Fiji which seemed abetter place than their devastated island. Main part of the Banabans still live on their appointed island in Fiji. Banaba lays pretty much as an old chost town with about 300 banabans remaining as caretakers.

Banaba got back a part of it's former busy life when a group of Scandinavians landed on it's rocky coast. This was the beginning of the first ever all Scandinavian DX-pedition to Pacific. The three Scandinavians were Peter OH1RY, Mats SM7PKK and Siggi TF3CW. They formed a team which spent two weeks in Banaba House fulfilling the demand of a fairly new DXCC country, T33.

The team was pretty good equipped using the Jarvis Island/Conway Reef equipment and the Schooner Galatea to carry it all to the island. They lived probably the hardiest two weeks in their life sitting by the radios only sleeping three, four hours a day while trying to keep the bands busy. They were facing the power of Mother Nature when leaving the island under severe weather conditions that almost made another wreck to Banaba islands reefs!

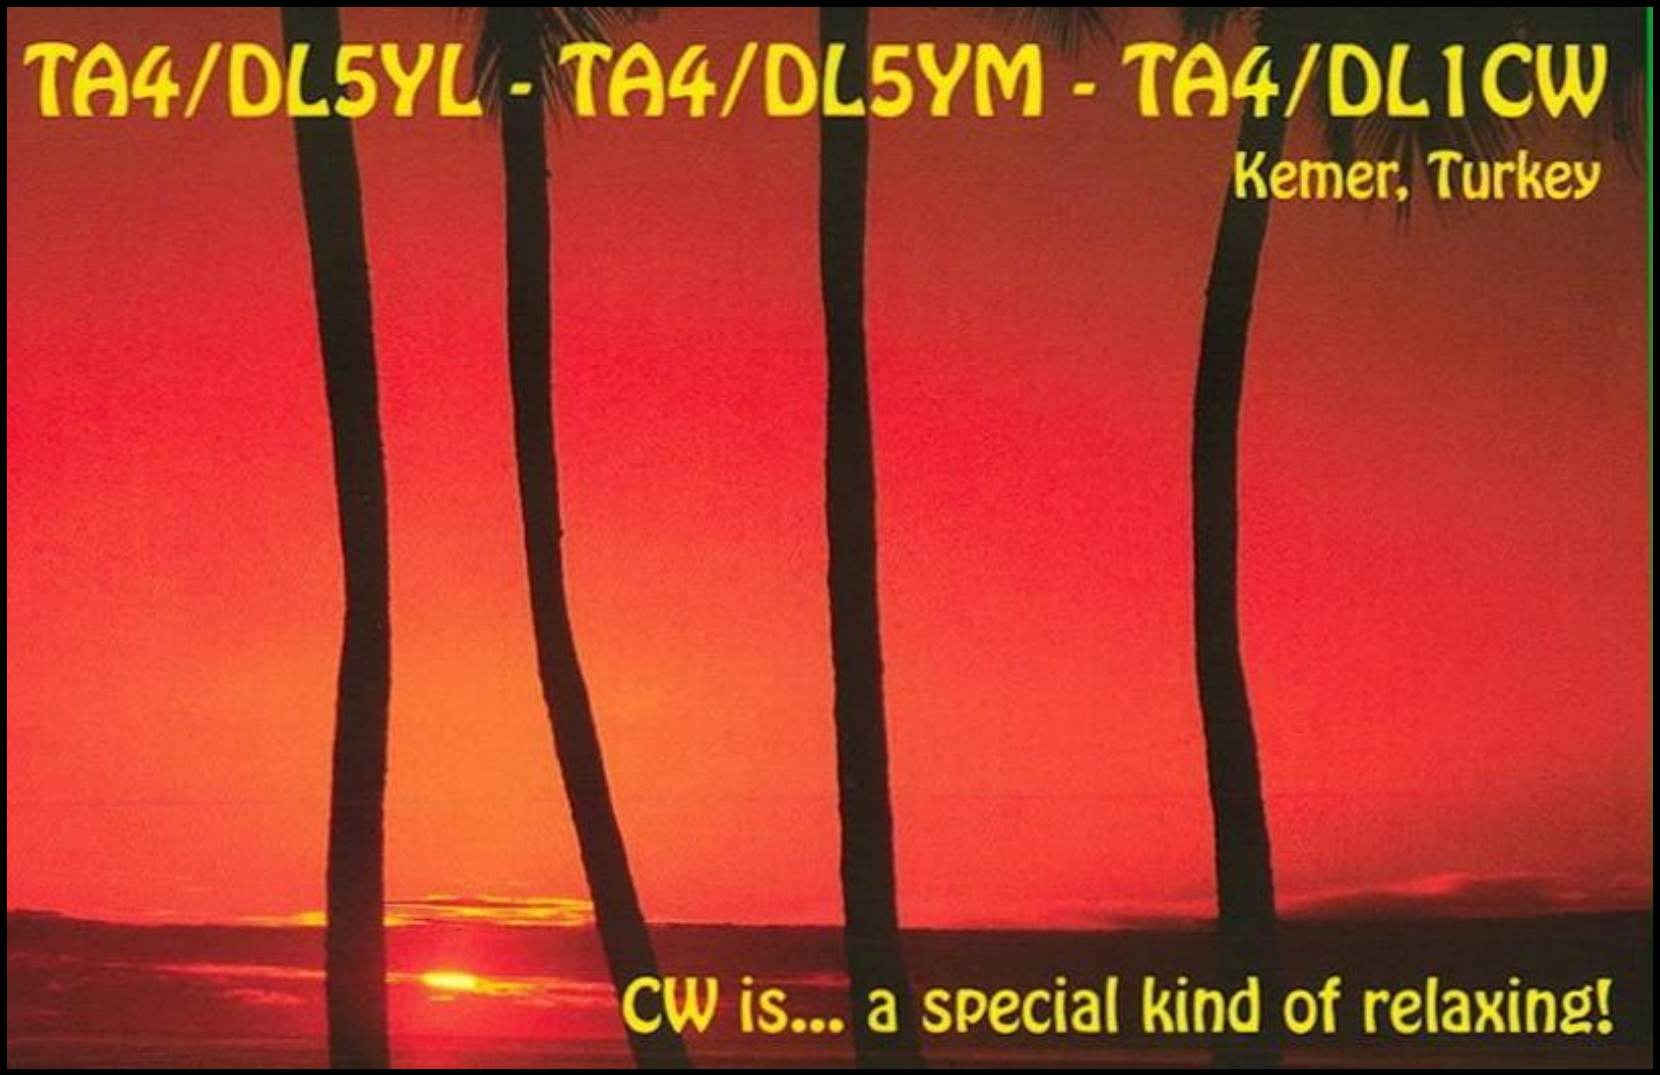

The team however knew what they were doing and everyone had an open mind to unexpected situations so even during the darkest moments you could see smiling faces around you. "Nothing can stop us, lets go for it!"

The people in Banaba gave us all the support possible and every problem were solved with a smile we will always remember. We got so many new friends there that if we`ll ever come back we know -we are wellcomed. Two weeks in Banaba also joined the team members together so that when it was time to say goodbye - we all knew :some day we will do it again !

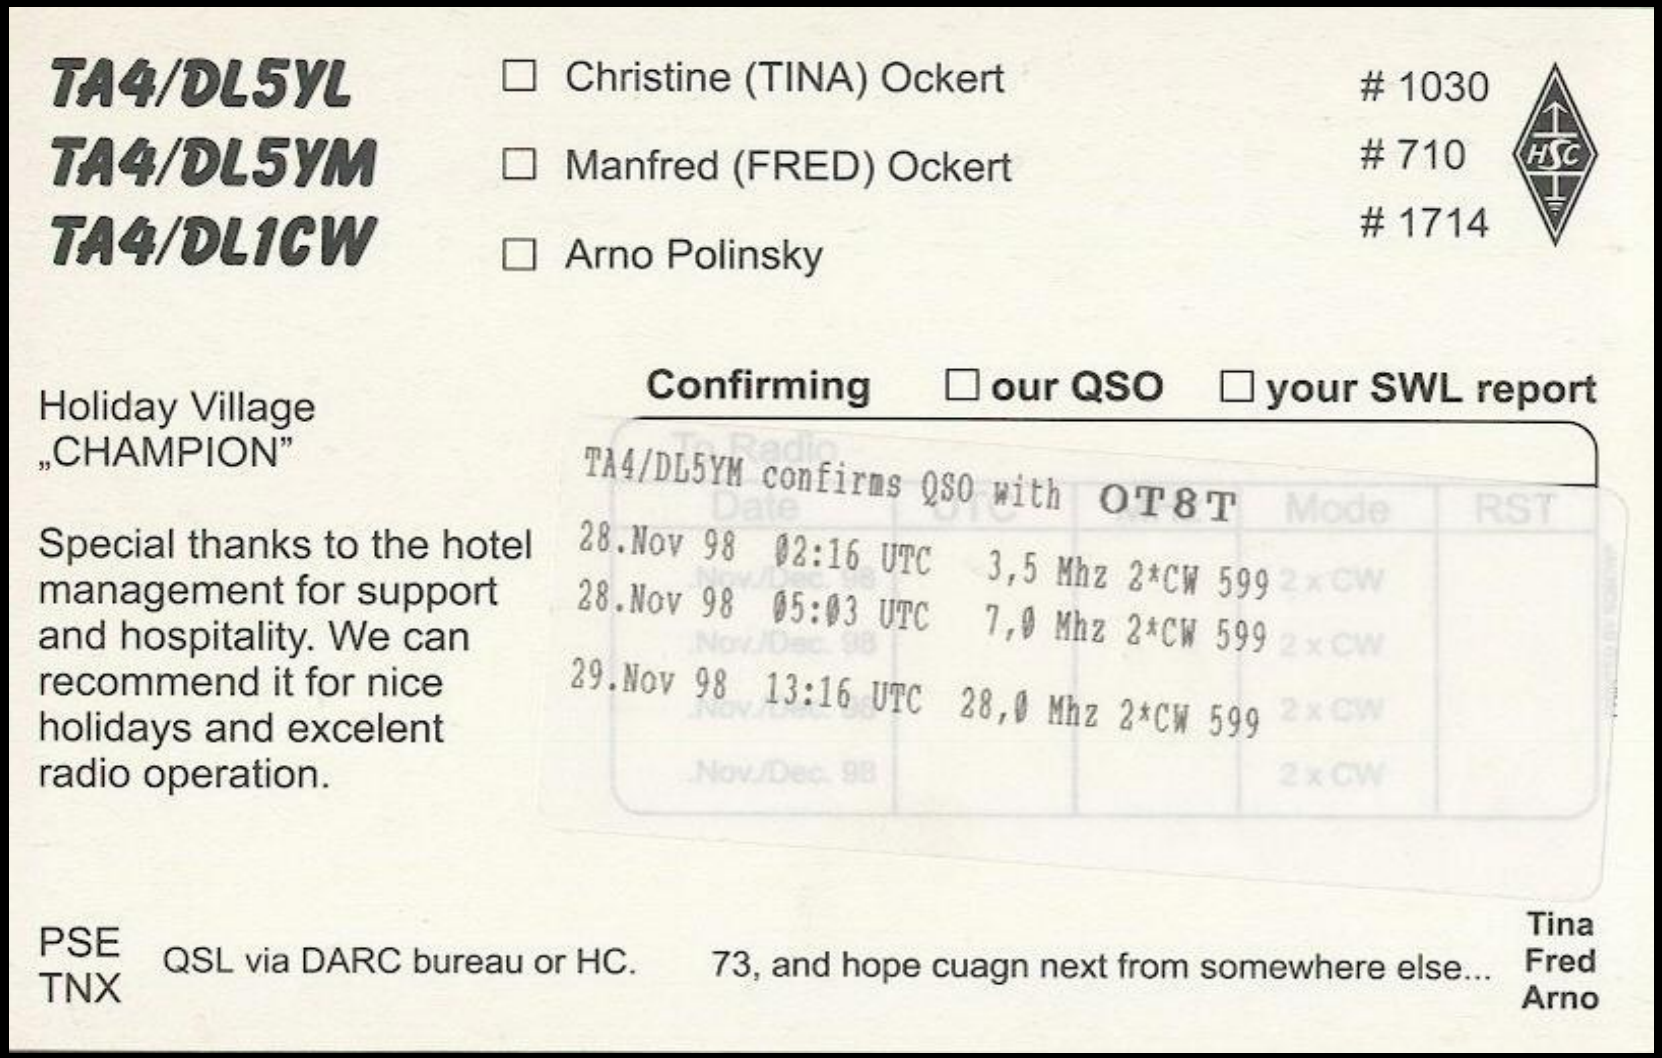

Thanks - hope You enjoyed it also!

Peter, Mats, Siggi.

A subglacial eruption started September 30, 1996 in the Vatnajökull glacier, Iceland. It broke through half a kilometer of ice in two days, sending a column 10 kilometers up in the air. The tremendous power of the eruption melted some 5000 cubic meters of ice per second, producing a kind of fjord in the glacier.

Please check out http://www.hi.is/~mmh/gos/ at Science Institute for more info, photos and links.

MAKING MULTI-MULTI AND DIVING INTO VOLCANIC VALKYRE WATERS

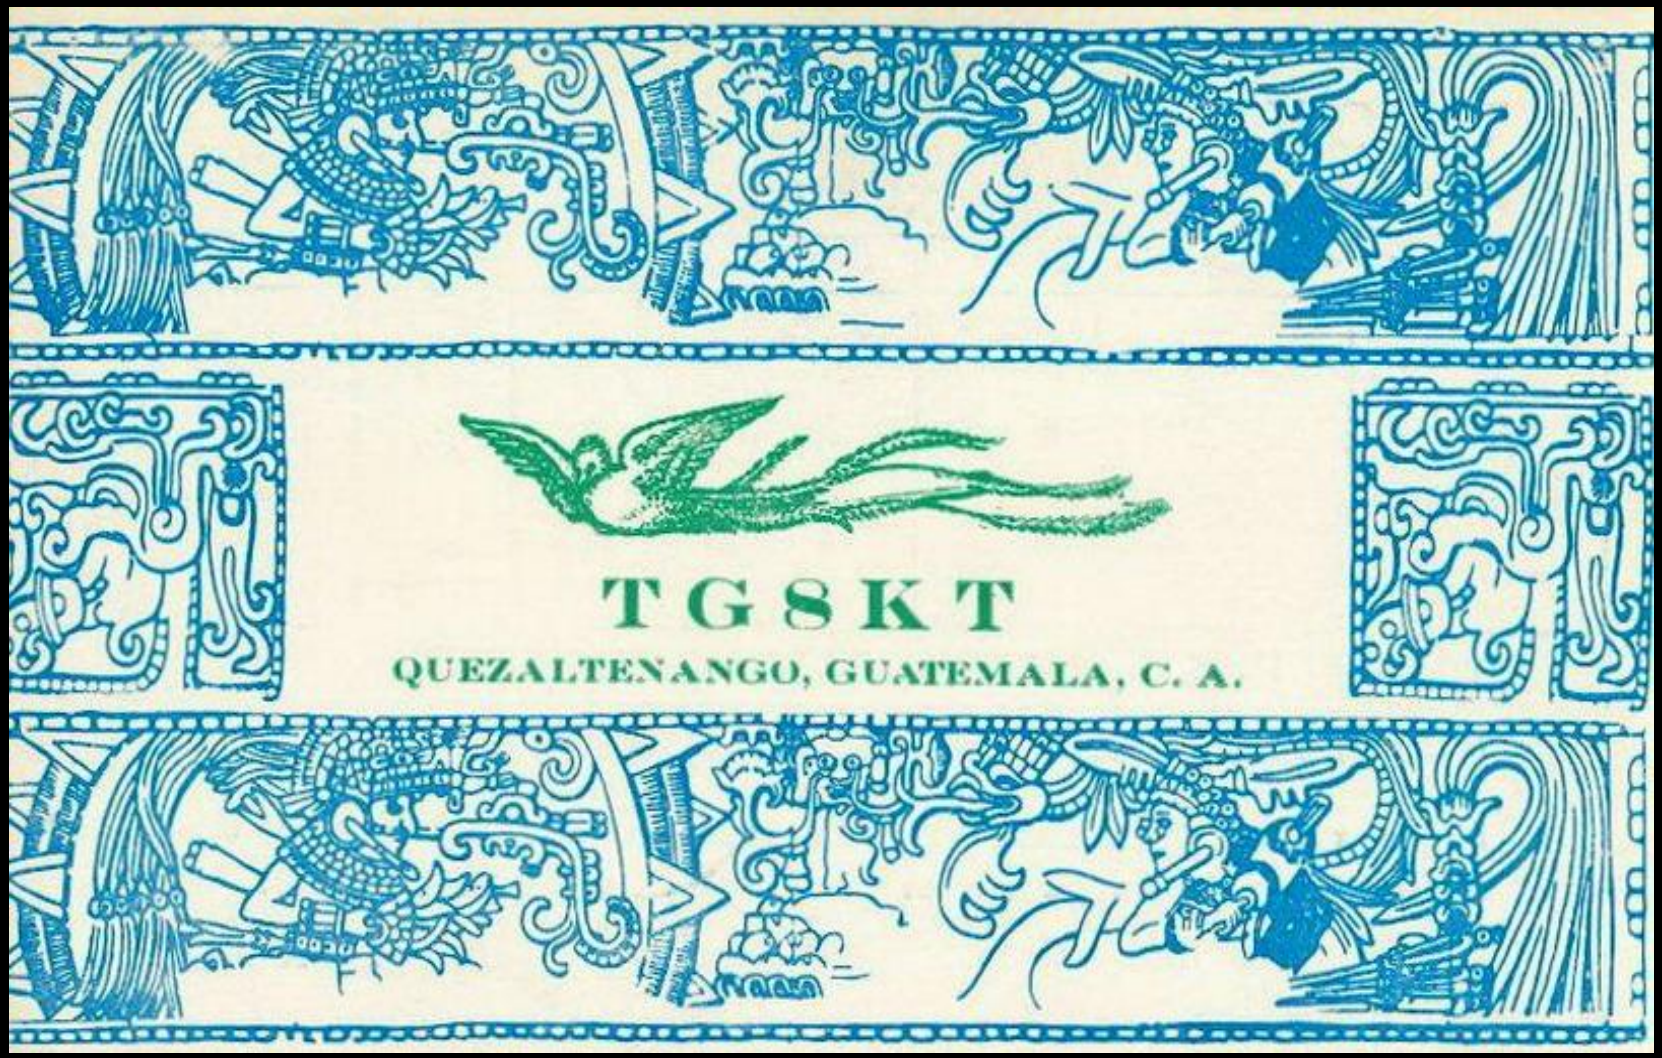

ICELAND, a beautiful island of great contradictions, lies just below the Arctic Circle. The deep fjords, numerous volcanoes and immense glaciers invited us – of the South China Sea DX Team – to visit these icy waters of the North Atlantic, jump into volcanic waters of the Blue Lagoon and find those planted trees still too young for our antenna support.

What we found were gracious hosts, a friendly welcome inviting us to activate TF3IRA club station for the CQ World Wide Contest and to present a series of lectures on contesting related subjects. We had the opportunity to see the geothermal energy plants, the geysers, the magnificent waterfalls, the volcanic lakes and the centuries-old traditions of vikings who have conformed to the newest technological and social environments with outstanding adaptability. The 270,000 people of Iceland live vigorously; they have a solid commercial basis and they excel in education, the standard of living and contributions to worldwide trade.

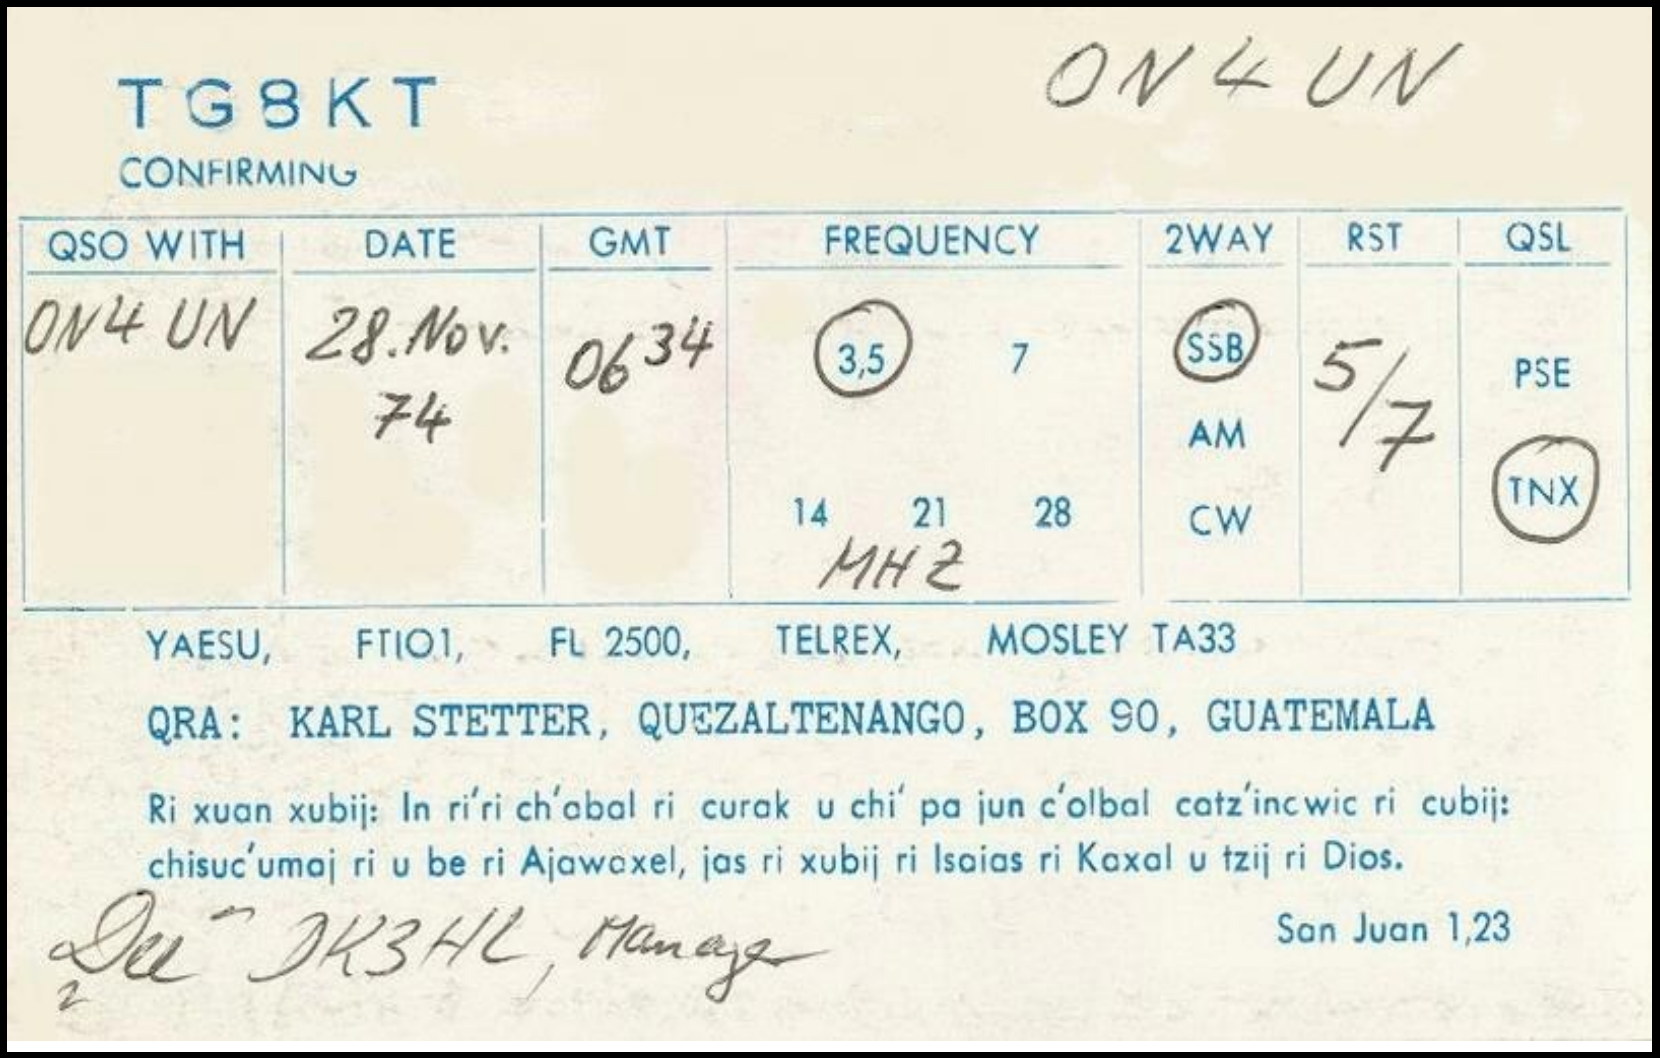

Our visit there, however brief, involved getting acquainted with a majority of amateur radio operators in Iceland. Halli TF3HP, President of IRA, made us feel home; Villi TF3DX was our main logistics guru. Bjarni TF3GB was the head of the 'welcoming committee' while TF3JRT, TF3AX and TF3TXT were working hard with the antenna pre-assembly. Johanna, TF3JKT and Arsell, TF3AOT were in charge of transportation. And last but not least, Sigge, TF3CW was overseeing everything from the distance.

We also wish to thank all the other members of the TF team who made our visit a memorable one. We tried to reciprocate by joining forces with the local gang and putting TF3IRA on the air with some new permanent powerful hardware. Some 14,000 QSOs later, we hope that you were happy with the performance and the availability of the rare 40th zone!

TNX QSL - QSOs verified by DL7UFR

The former French Cameroon and part of British Cameroon merged in 1961 to form the present country. It shares borders with six countries: Central African Republic (TL), Chad (TT), Republic of the Congo (TN), Equatorial Guinea (3C), Gabon (TR), Nigeria (5N).

Cameroon has generally enjoyed stability, which has permitted the development of agriculture, roads and railways, as well as a petroleum industry. Despite movement toward democratic reform, political power remains firmly in the hands of an ethnic oligarchy.

Location during our stay in Cameroon was the New Coco Beach Hotel in Kribi. We operated simultaneously with up to four stations from 160m to 10m. We logged 34476 QSO's, including 422 on 160m, 2303 on 80m, 2553 on 30m, 5750 on 17m, 3898 on 12m, 1921 on RTTY, 274 on PSK31 and 30 on SSTV.

Many thanks to all who made this DXpedition possible, especially to Erika Massing, the staff of the New Coco Beach Hotel Kribi, Floyd, N5FG and Bernd, DF3CB for the pilot and website support and Joost, ZS5S for Pactor MBO support.

Heard Island (IOTA AN-003) lies at 53°05' S – 73°30' E. It has a total surface of 368 km², dominated by the active volcano Big Ben, 2745 m high. It was discovered by sealers early in the 19th century. Heard Island is administrated by the Australian Antarctic Division and is now a wildlife refuge.

The expedition left Reunion on Jan 5, 1997 aboard the Marion Dufresne, the research vessel of the French Antarctic Division, and landed on Heard on Jan 12. Five hours and 50 helicopter flights were needed to land the 20 operators and the 34 tons of cargo. On Jan 14, VKØIR came on the air with 5 stations simultaneously; 2 more stations were added later on. The radio tents were distributed over 3 sites, separated by 1,000 ft. The last QSO was logged on Jan 27. Two days later, the crew and entire campsite were taken off Heard Island.

In 13 days of operation, VKØR logged 80,673 QSOs on 19 band/modes, including 1,241 on 160m, and 634 on satellite. We logged over 2,000 different RTTY stations. The expedition made numerous innovations, including daily uploads of the logs/updates/pictures via Pacsat, a very active pilot stations' network, and a real time analysis of propagation based on the computer logs. Our audience could read the daily reports, see the digital pictures and query the log servers both via internet and packet radio.

Our technical support crew (the people behind the scene):

Expedition pilots: ON4UN-John (coordinator), N1DG-Don, KØEU-Randy, W4WW-Scotty, WØEK-Bob, W2IJ-Jay, JH1ROJ-Isao

Internet/packet server support team: N1DG-Don, VE7TCP-Lyndon, PA3BXR-Rob, ON1AIG-Andre

1995-FEB-09	1636	20m	CW	599

IOTA - OC 003, Tnx QSL,73,s Rudi Mgr

DL3DXX

Cocos (Keeling) is a beautiful coral atoll in the Indian ocean about 1200 kms south west of Java/Indonesia. 25 tiny islands are scattered around a lagoon of about 7 miles in diameter. Cocos Island is a big underwater volcano, rising from 15000 feet below sea level to just 15 feet above. First sighted in 1609 by William Keeling and settled in 1826, the Islands became part of Australia after a plebiscite in 1984.

We had a wonderful time on the island. A superb QTH and perfect traffic conditions resulted in 15.285 QSOs with 130 countries. Especially enjoyable it was to have a lot of low band activity, even to stateside on 80 and 160 meters. Thanks to all who made this DXpedition possible.

10m	1,463	894	71	2,428
Total	43,407	14,265	3,918	61,590

On 17 days of operation we made 61,590 QSOs in CW, SSB and RTTY. The focus on Europe ended up in 44% of the contacts, followed by Asia with 31% and North America with 22%.

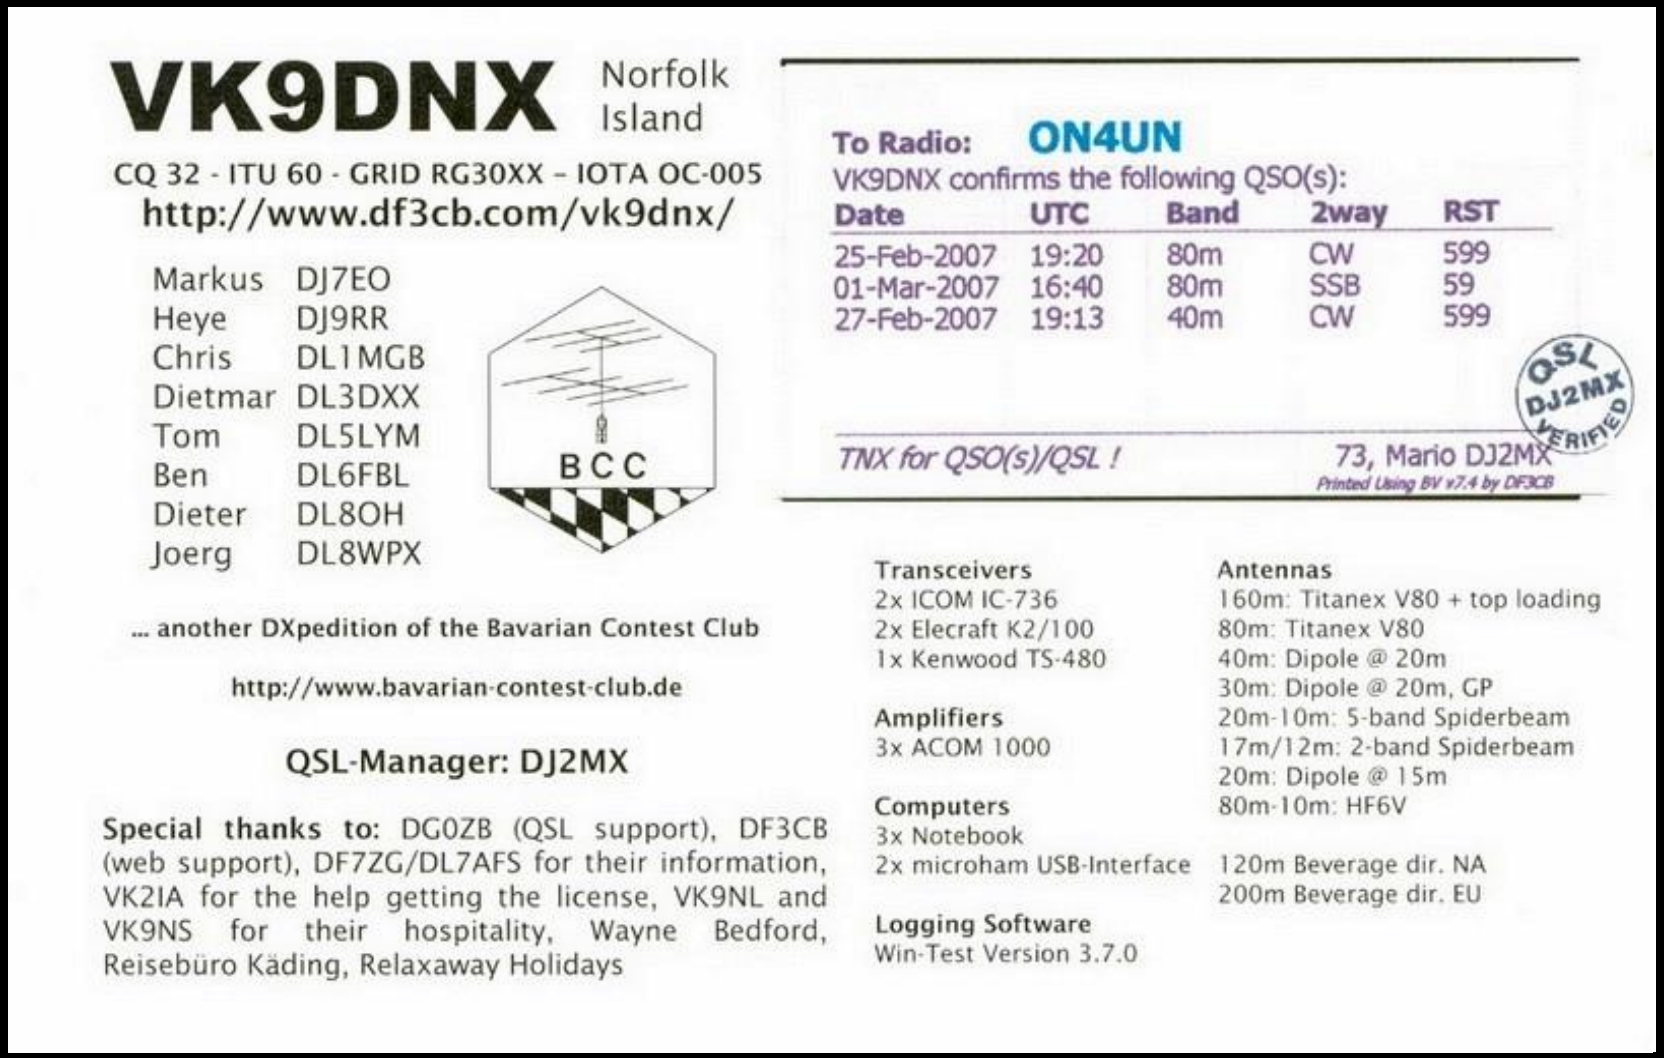

Norfolk Island, a unique volcanic outcrop in the South Pacific, was discovered by Cptn. James Cook in 1774. A mild subtropical climate has created a beautiful spot of only 35 km², which offers everything in concentrate, from its sharp coral reefs and colourful fish to bushwalking among the planet's tallest tree ferns. White sandy beaches, steep cliffs on a stunning coastline rimmed by huge Norfolk pines as well as lavish green pastures paint the picture of this paradise island.
Convict settlement until 1855 and the arrival of descendants of the Bounty mutineers are the most important steps in Norfolk's history. Since 1979 Norfolk has its own Government, customs and immigration laws and its own stamps.

DJ 5 CQ Rudi Mgr

my second QSL dear John !

Murphy was on tour with us! We lost the first day after missing our airplane due to custom trouble in Jakarta, had to stop satellite operation after only 39 QSOs because of a failure of the 70cm transceiver, and had to pause operation several times, because of strong local QRM, that made any traffic impossible. 1100-feet-high mountains between us and stateside allowed only few contacts with North America. Nevertheless - we had a lot of fun!

In 74 hours of activity we made 7347 QSOs on 10 bands and enjoyed 80 meter activity into Europe as well as the first ever activation of Oscar 13 from this Island. Thanks to all who made this DXpedition possible.

Anguilla is a British overseas territory in the Caribbean, one of the most northerly of the Leeward Islands in the Lesser Antilles. It consists of the main island of Anguilla itself, approximately 26 km (16 miles) long by 5 km (3 miles) wide at its widest point, together with a number of much smaller islands and cays with no permanent population. The island's capital is The Valley. The total land area of the territory is 102 km^2 (39.4 square miles), with a population of approximately 13,500 (2006 estimate). Having spent a dream vacation in "The Ferryboat Inn" at Blowing Point. About 8.500 CW QSOs were made with an 100 W TRX and vertical antenna.

Special thanks goes to Marjorie McClean - owner of "The Ferryboat Inn" for excellent support and hosting, Mr. Wycliffe Richardson - for uncomplicated licensing and Jan B. C. Harders, DJ8NK / VP2ENK for a lot of good tips.

British Virgin Islands - Tortola Island
IOTA NA-023 - CQ 8 - ITU 11 - Grid FK78

The British Virgin Islands is an overseas territory of the United Kingdom, located in the Caribbean to the east of Puerto Rico. The islands make up part of the Virgin Islands archipelago (the remainder constituting the U.S. Virgin Islands). They consist of the main islands of Tortola, Virgin Gorda, Anegada and Jost Van Dyke, along with over 50 other smaller islands and cays. Around 15 of the islands are inhabited. The largest island, Tortola, is approximately 12 miles (19 km) long and 3 miles (5 km) wide. The islands have a total population of about 22,000. The capital, Road Town, is situated on Tortola.

WHAT, WHERE AND HOW IT BECAME POSSIBLE:
South Georgia Island, located 1350 Km ESE of the Falkland Islands, was the center of whaling operations dating back to the 1800s. One prominent whaling station, Grytviken, located on the north coast started whaling operations in 1904 and ended in 1965. The 1995 DX-expedition was conducted from the now derelict Grytviken whaling station. We would like to thank all Falkland Island Government departments concerned for all licensing and landing permission. Kind support was received from the radio amateur community at large permitting us to conduct this operation on all bands from 160m through 10m. Special thanks go to KC1MH (Paul), XQ8ABF (Alex) and VP8WA (Peter) for their logistics support and to all radio amateurs, clubs, businesses and media who made this operation possible by contributing their time, funds and equipment. Due to space limitations we are able to list only a few of the many contributors. However, you are all remembered. It was an honor serving you, the international DX community.

EQUIPMENT:
Yaesu radios FT1000, FT990s; Ameritron linear amps AL811s; ETO linear amps Alpha 76A and 91B; HF antennas (Cushcraft A3S, A3WS, 40-2CD, R7; Butternut HF2Vs; Battle Creek Special; Uni-Hat CTSVR; The Radio Works wire antennas, coax, rope, etc.; IIX tripods; Fritzel FD4); MFJ/Ameritron AL-811 amps, 986 tuners, 490 keyers, etc; AEA PK-900s, MM3 keyers, etc; Timewave DSP 59 &9s; EAC EA-3022 SMX power supply; Kenwood, DuneStar and ICE filters; R.A. Kent paddle keys; Heil Sound Pro-set 4 boom sets, mics, etc; Onan generators; Wireman rope, coax, etc; Azimuth clocks, weather station, etc; Software (Logic 4, RTTY W1FB, Mini Prop and CT).

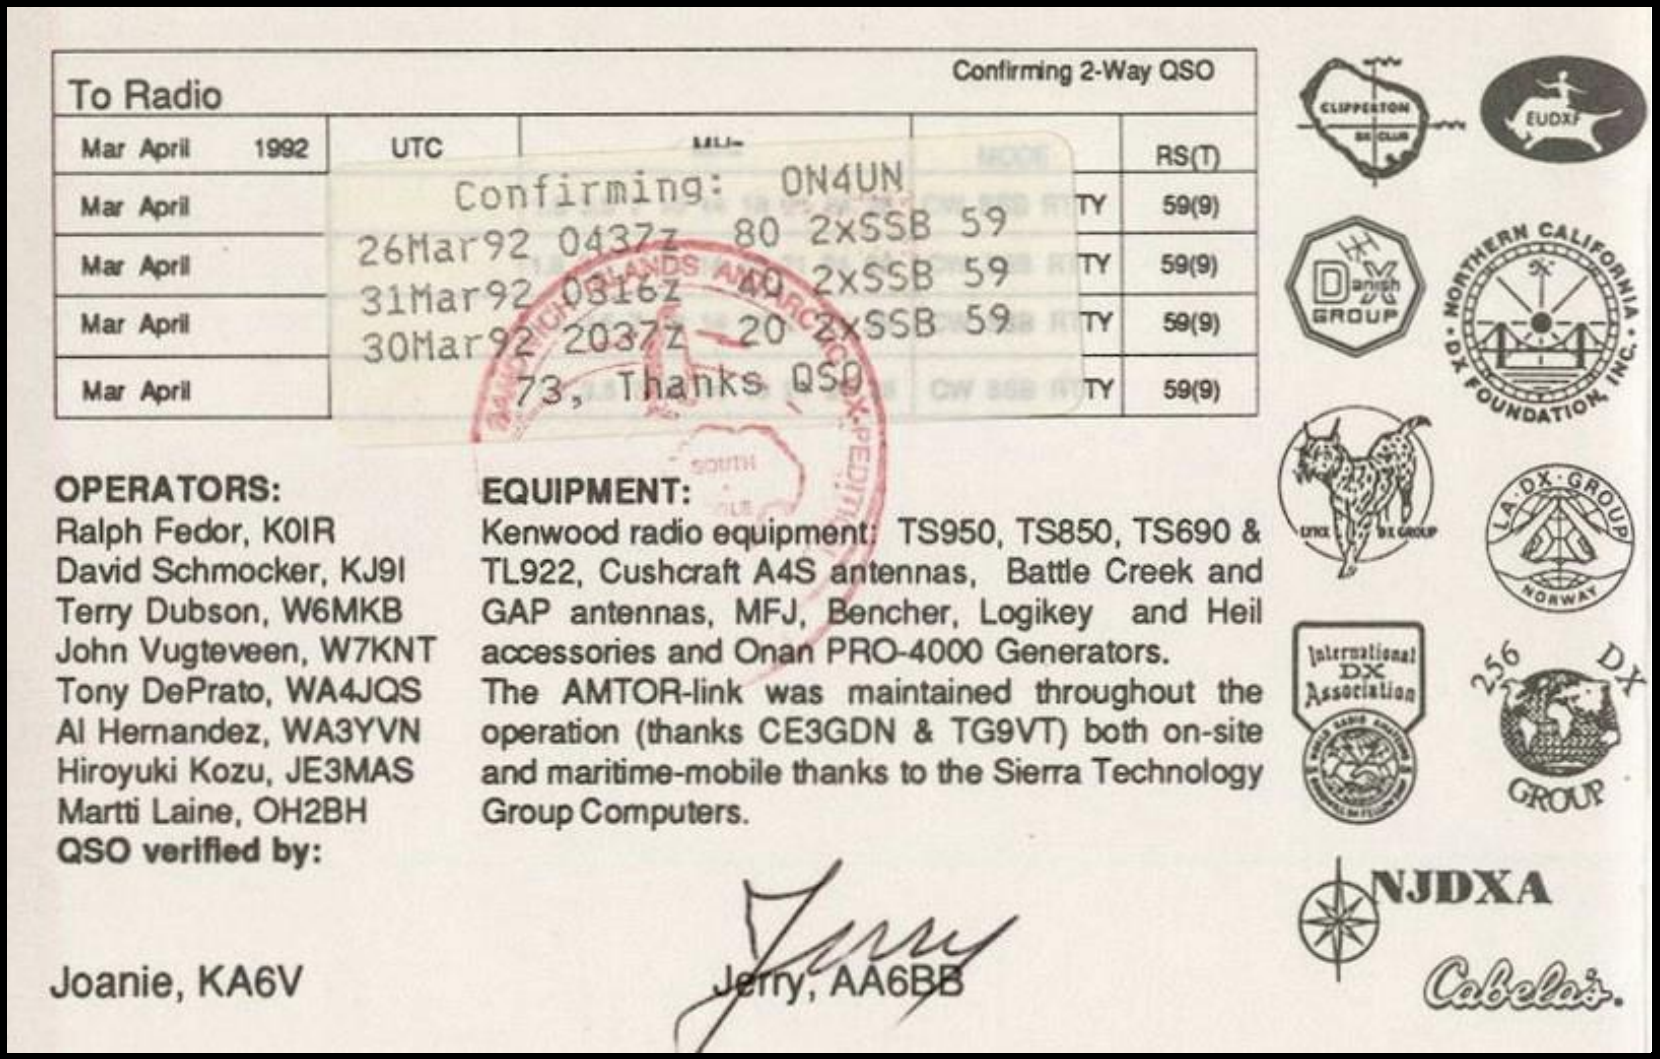

DONORS:
JA1BK, JA2KSP, JA3DLZ, I2MQP, WA2HZR, WA2VKS, K3KNH, KA2WXU, K4TKM, WD4GDZ, WA4DRU, W4DR, W4AXO, W5AQ, W5HL, WA6AHF, N6HVZ, W6OSP, KA7BSD, WA8MEM, WB9NUB, KYØA

CLUBS:
Eastern WA DX C, Western WA DX C, HARC, PCARS, Magnolia DX A, Northern CA RTTY Group, Canadian DX A, Alamo DX Amigos, Carolina DX A, Lone Star DX A, Northern Ohio DX C, New Orleans Int. DX Convention. Special thanks to INDEXA for preparing and managing the QSL cards.

We hope you enjoyed your contact with VP8SSI

The South Sandwich Islands are located in the Scotia Sea 1,150 miles southeast of the Falkland Islands within the Antarctic pack-ice region. Forming a glacier-covered arc, the eleven volcanic islands rise steeply from the icy water.

Southernmost in this mountainous group is Thule Island, the base of VP8SSI, rising 2,600 feet from the sea. Projecting from the cliffs of Thule is a small exposed land area - the only area suitable for landing and camp location. Because of the constant crashing surf, few landings have ever been attempted without a helicopter. Our Zodiac shore landing was rough and wet!

The famous British explorer, Captain James Cook, sighted the South Sandwich Islands in 1775, noting extreme winds, snow, cold and cloudiness with rare moments of sunshine. Cook's observations proved to be true as hurricane force winds shredded our arctic tents, driving us into the ruins of a tiny rescue hut from where we had to evict several seals. Hostile weather and aggressive fur seals challenged the expeditioners daily.

Cook described the South Sandwich Islands as "the most awful place in the world." Having experienced one of the greatest DX adventures, the team became believers in Cook's powerful words. A successful landing was made thanks to the skillful crew of the American research vessel, the Abel-J. Dispite the adversities, 40,000 QSO's were made and the team proudly hoisted the British flag in celebration. We congratulate you for making this contact. We sincerely thank our supporting audience - you made the VP8SSI dream come true.

The team would like to thank all amateurs, groups and companies who have helped us with donations: Kenwood USA, Corp., Cushcraft Antenna Corp., MFJ Electronics, RF Enterprises, Bob Heil Sound, IIX Equipment, Ltd., International Wire and Cable Co., Bencher Iambic Paddle Inc., Gap Antenna Products, Inc., Butternut Electronics, M Squared Electronics, Sierra Technologies Group, Synthetic Textiles Inc., Cabela's, Gateway 2000 Computer Systems, Logikey Co., Den-Tronics, Xantek, Inc., W9INN Antennas, J*COM, KD7P Software, W6EL Software, W1FM Software, Payl Software, KD2LL Software, Aerospace Consulting Software, AMSAT, Personal Database Applications Software, R&D Electronics, Patagonia Inc., W8GZ DX Foundation, Lightening Bolt Antennas, CPS-Hamrad, WB2DND Software, U.R.E., and to 5/9 Magazine Japan.

Also special thanks to G4DYO and the Chiltern DX Group, VP8's-WA, ZV, ALJ, BFH, BOQ, ML, and NY, JA1ACB, JH3DPB, JA1ELY, WJ1R, K1BV Helen and Ron Green, KB7IVU, KC1MH, JA0KZ, AH2BE, WW5L, JA3AUQ, JA3DGV, JA3PFZ, JA3MNP, JJ3PFZ, K0LST, EA6WV, OH DX Boys, San Diego DX Club, SEDXA, Long Island DX Assn., IARS, Birdland, U.K., IRDXA-W6PQS, and to Captain Hamilton Carter & crew of the Research Vessel ABEL-J & Spice Island Traders.

The Henryk Arctowski Station of Polish Academy of Sciences was found on 26 Feb. 1977 in Admiralty Bay on King George Island at South Shetland archipelago. The staff of the station realizes the polar project of Polish Academy of Sciences. Biological, meteorological and geophysical (seismology magnetism and ionosphere) researches are carried out all the year. Constant staff of the station amounts 19 persons including scientists and technicians. The station receives scientists from other countries on the basis of the manual exchange. The main coordinator of researches carried out the H. Arctowski Station is Institute of Ecology of Polish Academy of Sciences-Dziekanów Leśny near Warszawa.

TNX QSL - QSOs verified by DL7UFN

Situated in the Bay of Bengal and defining the western boundary of the Andaman Sea, Andaman and Nicobar Island, are a slice of India in Southeast Asia. The islands consists of 572 islands, islets and rocks. They were long cut off from the outside world. Seafarers mostly avoided the Islands, because the original habitants were hostile to outsiders. During the British colonisation, both freedom fighters and hardened criminals housed under one roof in the Celluar Jail of Port Blair. The islands were briefly occupied by the Japanese during World War II before being recaptured by British and later handed over to the post-independence Indian government.

During the possible 8 days of operation our group logged 22950 QSO's, including 16100 on CW, 6332 on SSB, 489 on RTTY/PSK31 and 29 on SSTV.

Many thanks to the NIAR who enable this operation, the staff of the Megapode Nest Hotel, Port Blair and DF3CB for the pilot and webpage support.

Macau - is an overseas province of Portugal on the southeastern coast of China at latitude 21° 11' North and longitude 113° 33' East. Some 40 miles to the east-northeast, across the mouth of the Pearl River, is the British Crown Colony of Hong Kong. The territory of Macau comprises a total area of 6.2 square miles and is a peninsula. At the extreme northern end of the peninsula, a narrow ithmus marked by an imposing gateway - the Portas do Cerco (Border Gate) - joins Macau to China's Guangdong Province. Macau is a Chinese territory with Portuguese administration and a population of 295,000 people, more than 95 percent Chinese.

The Ruins of St. Paul - is the most famous sight in Macau. It was designed by an Italian Jesuit in the early 16th century and built with the assistance of Japanese Christian artisans who had fled from feudal persecution in Nagasaki. A corner stone gives the date of the building as 1602. The Church was described as "the greatest monument to Christianity in all the Eastern lands."

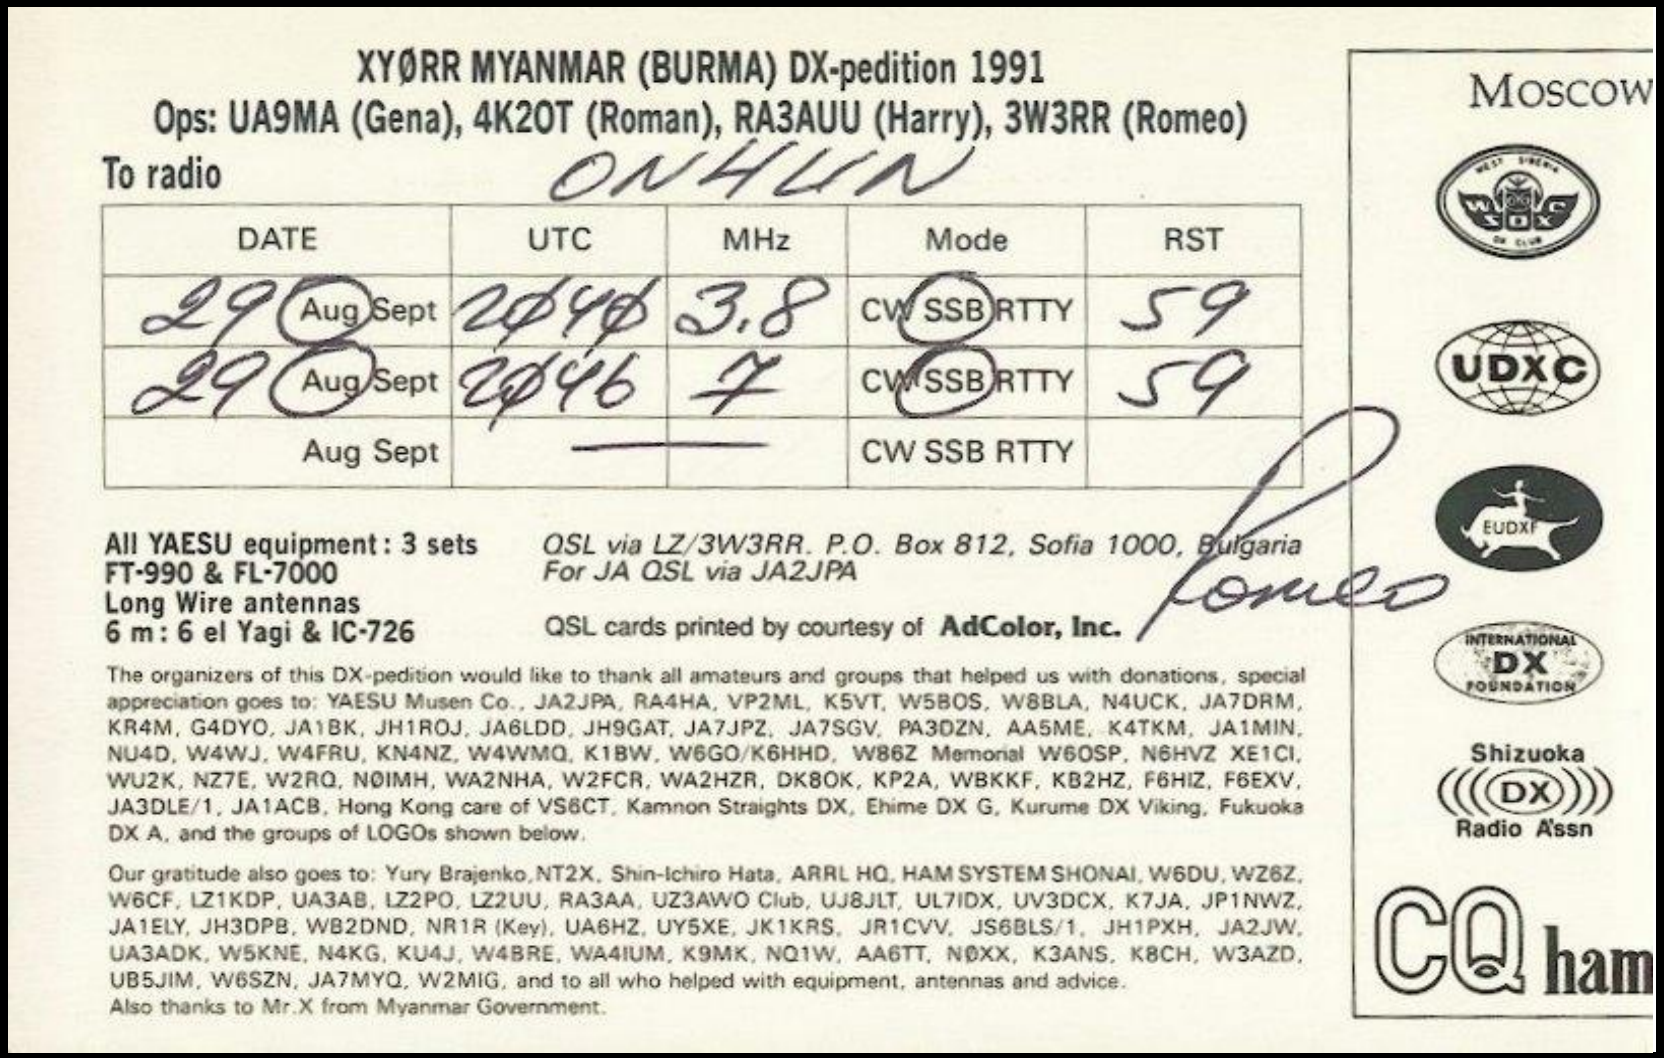

In 1835, at the height of a disastrous typhoon, the Church of the Mother of God caught fire and burned to the ground leaving only the facade.

YK9G **UK DX-pedition to Damascus, Syria** **Grid Loc : KM83**

In just under seven days a team of five UK operators (**Roger G3SXW**, **Nigel G3TXF**, **Fred G4BWP**, **Lionel G5LP** and **Rob GM3YTS**) made 28,100 CW QSOs (net) operating as **YK9G** from the **YK0RJ** club station in Damascus.

The operators are most grateful to **Omar YK1AO** and **Marwan YK1AU** of the Syrian IARU member society **SSTARS** for their invaluable assistance with the licence and logistical support.

THE FINAL FANFARE WITH A BRAND NEW DXCC STATUS

It is very rare for a new DXCC Entity to be born in the middle of busy Europe. This has brought some special excitement and joy to the air waves.

For Kosovo this joy was doubled as their new ITU (+383) country dialing code was activated at the same time. Whether by radio or by telephone, the mountainous state of Kosovo is now truly connected to the world. It was time for jubilation by both radio folks and by telecom administrators. DXCC country 340 is here. The distinctive blue-yellow flag of Kosovo is proudly flying high.

The first two radio venues were the SHRAK HQ at the Technical University in Pristina and the out of town Ura Gurit Hotel in Vushtrri, some 20 km away. Tall antenna towers were installed and Kosovo suddenly became the most sought-after country across the bands. Tens of thousands were there wanting to catch a new star, Z6ØA. As the local power lines were noisy, and noisy LED lights illuminated the area, it was better to look for a much quieter location that was as far away as possible from people and noise.

An empty, war torn house was found at 1000m ASL. Unlimited space for beverages was also available. While the house itself was riddled with bullet holes, there was one corner that, thanks to gas heating, was cozy for operating. This house became home for our low-band operations in the later weeks. While the temperature was often down to minus 17C (2F), the warm feeling of handing out low-band counters more than made up for it.

THE FIRST LICENSED AMATEUR RADIO OPERATION FROM ALBANIA

This mountainous, Balkan state is bordered by the Adriatic Sea, Yugoslavia and Greece. Its population of 3 million people is now opening its hearts and homes after many decades of very strict order. Albania has an interesting history, is rich in natural resources and natural beauty and has an exceptionally warm people that should be welcomed into our international community of nations.

The ZA1A team was given the honor of establishing amateur radio in Albania and training twelve Albanian students to carry that seed further. Albania is no longer a rare country in DX – Albania is now within reach and open for your visit. Indeed, ZA-land can easily be the destination of your next itinerary. Contact ZA1A team members or any of the new licensees for details.

The ZA1A project has been a splendid example of international friendship among many individuals and national societies under the patronage of the International Amateur Radio Union (IARU). The assistance of the NCDXF, the Japanese CQ Publishing Company, the Yaesu Corp. and the Kenwood Corp. also are recognized by many of the Deserving throughout the world of amateur radio.

Welcome, Albania, to the family!

THE INTERNATIONAL ZA1A TEAM:

DF5UG, I2MQP, I2KMG, I5FLN, IKØFEW, JA1BK, JA1HQG, N7NG, K7JA, W7SW, OH2BH, OH1RY, OH1VR and OH2BAZ.

THE INTERNATIONAL SUPPORTING TEAM:

Richard Baldwin, W1RU, President of IARU; Shozo Hara, JA1AN, President of JARL; and David Sumner, K1ZZ, Executive Vice President of ARRL.

THE ALBANIAN HOSTING TEAM:

Agim, Artur, Dajlan, Fatma, Fredi, Geni, Ibrahim, Maksim, Toli – with Arben, Dali, Gezim, Jovan, Lushi, Mirela, Niko, Sadik, Teo, Ylber and many others.

80M DXCC QSL CARDS ON4UN

The Kermadec Dx Association would like to express its sincere appreciation to Vertex Standard (formerly Yaesu) Japan for the supply of radio equipment and Cushcraft of USA for supplying new antenna hardware for use with the antennas they previously provided for our ZL9CI DXpedition. We would also like to thank all those who provided funds for the cancelled ZK3 DXpedition which have now been used for this DXpedition. Due to the limited space available only logos of our principal sponsors are listed below. Further information can be found on our web page. www.qsl.net/zl7c/

A very special thanks goes to Terry (ZL7TK) and Trish Kamana, Kath and Ross Morrison, Air Chathams and all those people in the Chatham Islands who provided most valuable assistance to us during our stay.

Chatham Island is an extinct volcano with a population of approximately 700 and is the home of the rare Chatham Island Black Robin of which less than 50 remain in the world. It is also the first place in the world to get the sun each day.

ABU-AIL

80M DXCC QSL CARDS ON4UN

RADIO	DATE	TIME	MHz	REPORT 2X
ON4UN	DEC. 7. '80	2109 GMT	3.8	SSB 5/6 CW —

Abu-Ail is located in the Red Sea at 14º, 5' North, 42º, 49' East. The islands are of volcanic origin and there is no life other than that brought by humans on the island except for an occasional bird. The fort on the top of the rock was built by the Turks approximately two-hundred years ago and was named Abu-Ali but somehow through misspelling it has come to be known as Abu-Ail. The purpose of the lighthouse is for navigation purposes. Those ships travelling north of the lighthouse toward the Suez Canal are navigated to the east side of the rock and those travelling south to the west side of the rock. Our crew, which consisted of J28AZ, K6LPL, DJ9ZB, TU2IR, and F6ATQ departed from Djibouti on December 4, 1980. It was a slightly rough but uneventful sail of twenty hours to the island. We arrived in the late evening and made a very difficult and treacherous landing in which we sustained minor injuries. The boat was completely off loaded by dusk and by flashlight we made our way to the base of the mountain from the landing site into a stable where we got a generator going and made our first contact. The next morning at dawn, we ascended the 100 meter high mountain carrying the generators and radio equipment on our backs up a very steep and treacherous pathway and we were on the air four hours later. Winds were a continuous problem on the DXpedition and during our landing exceeded 50 miles per hour. It never did seem to stop blowing the entire time we were there although the temperature was quite pleasant both day and night. Operation continued for approximately 100 hours and a total of 16,000 contacts were made. Due to power limitations and interference between the stations, only two stations could be used at one time.

After a very pleasant and enjoyable stay, which was somewhat marred by the continuous breakdown of the generators, we departed around 6:00 A.M. on December 12, 1980, and sailed directly into a 48 hour storm. Conditions were extremely difficult and we arrived in Djibouti over a day late and we all missed our plane connections. We all swore "Never Again" and by the time the next day had come around, we were all talking about a new DXpedition.

DXCC - WAZ
SOCALIF DX CLUB

Special thanks go to W6ORD, Wilson Antenna Company, the Southern California DX Club, and the West Coast DX Foundation for support.

Bajo Nuevo...
This seldom visited reef is located 300 miles north-east of San Andres Island, south-west of Jamaica in the Caribbean Sea. Landing is only possible at a low sand bank, 200 metres long and 10 metres wide. Our expedition was organized at San Andres Island and we took off from there in a 40 foot diesel boat. SMØAGD tried to find Bajo Nuevo back in 1974 but failed because of navigation problems. This time we used Loran-navigation and managed to locate the low reef which is visible only from within a distance of 3 naut. miles. During the 67 hour operating period, we made 6300 QSO's from Bajo Nuevo.
This expedition was organized by Sundsvall DX Group, Sweden, and sponsored by Northern California DX Foundation, Inc.
Equipment: 2– Yaesu FT 101 E. 1– FL 2100 B. 1– Heath SB 200.
Antennas: 12 AVQ, 18 AVT and dipoles.

Kingman Reef is located at 6 degrees 24 minutes North Latitude and 162 degrees 22 minutes West Longitude and lies approximately 925 miles south of Honolulu and 400 miles north of Christmas Island, our point of departure.

The reef is shaped like a 'vee' and has two legs, one running east-west and the other northwest to southeast. Most of the reef is submerged, but 185 meters of the reef is exposed near the apex of the two legs. The "land" part of the reef is about four meters above the ocean and consists of packed clam shells.

The reef was discovered in 1798 and came under American jurisdiction in 1922. It is controlled by the United States Navy whose permission is required for a landing.

We used three operating tents and six antennas: an all band vertical, an 80/40 vertical, a ten meter vertical, a 160 meter inverted 'L', a three element triband beam and a six meter beam, all guyed to steel rods driven one meter into the shells. The tents were secured by guys tied to one meter rods and were further protected from continuous winds gusting up to 70 kilometers an hour by tarpaulins guyed to steel rods.

Despite unfavorable weather conditions, in 152 hours 19,706 contacts were made including 681 on 160 meters and 55 on rtty.

The operators wish to acknowledge support from The Northern California DX Foundation, Inc., The DX Family Foundation of Japan, The Clipperton DX Club, The International DX Foundation, the European DX Foundation, Yanmar for its loan of two generators which never failed and Citizens Watch Company.

Thanks are due to JA1ACB, KK4LM, HB9RG, TR8CR, W5FS, Long Island DX Association, Northern Illinois DX Association, Mile Hi DX Association, F6CVR, Club DX 24, LA DX Group and REF 33 for significant financial donations.

Thanks also go to N2IC/Ø, WØZV, WØUN, KDØRW, N2AIR, N6AHV, W8UVZ, W8KKF, W9UCW, W9YYG, K9GX, JR1AIB, JH1HGC, JA7RHJ, JE1JKL, AF2C and T32AN and to W6DU and W6OAT for their assistance and support.

Thanks for hospitality and other support are due KH6CC, KH6OR, KH6BZF, KN6LJ, KH6XX and W6HTH/KH6.

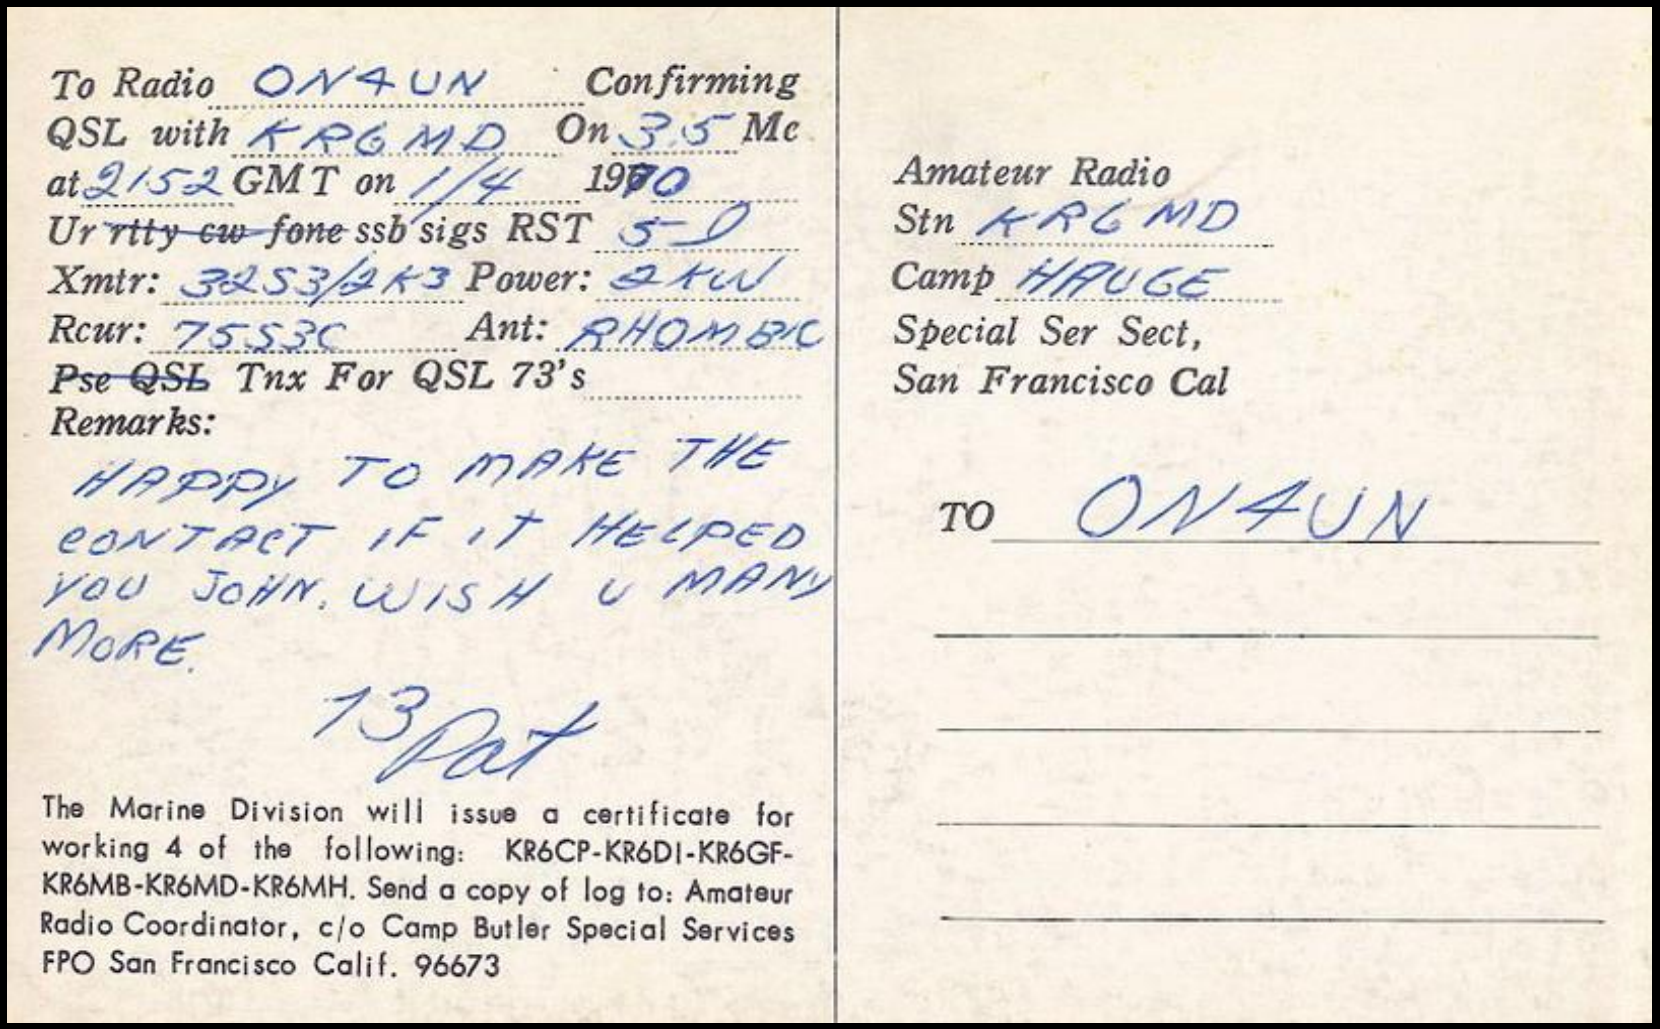

Last, but not least to the wives and families of the operators go our thanks for their loving support. We always knew they were concerned about us and we love them.

TNX for QSOs 73 de R1MVW

Verified by Andy UA2FB

Historical facts:

- The Malyj Vysotskij Island (Ravansaari) became well-known in the middle of XIX century when Zorinskij fortification was built by Russians on Vyborg' approach. Ruins of this fortification are still located in the northern part of the island.
- From 1918 to 1944 the island was strongly defensible for sea-line of Finland. In this period the housing estate was generated in the central part of island. The population of MVI was around 1000 people.
- In 1962 the agreement between Finland and USSR was signed. It concerned the Finnish rent of the part of Saimaa Cannel and Malyj Vysotskij Island for 50 years.
- After the 1-st HAM radio DX-pedition running in 1988 the MVI was included into the DXCC list.

THANKS FOR QSOs AND CU AGAIN!

R1MVW/R1MVC was the first ever DX-pedition to Malyj Vysotskij Island at this hard weather time (15-28 November, 2005). We chose these dates to make maximum possible QSOs on low bands, to operate Leonides MS on VHF, and to participate in the CQ WW DX Contest CW. Expedition team: DL3DXX, DL5LYM, OH5LID, OH5NE, RA1AR, RA2FW, RA6LBS, RK3FA, RU1AS, RV1AC, RV1CC, RV2FW/1, RX1AX, RX1CQ, UA1CDA, UA2FF, UA2FM, UA9XC.

In spite of many difficulties, the team succeeded the goals. We made about 37.000 QSO: 160m - 5086 QSO, 80m - 10070 QSO, 40m - 8469 QSO, 30m - 4345 QSO, 20m - 5245 QSO, 17m - 2377 QSO, 15m - 1100 QSO, 12m - 123 QSO, 10m - 14 QSO, VHF - 122 QSO, and 9056 QSO in CQ WW CW. Number of QSO on 160m and 80m is new record for DXpeditions.

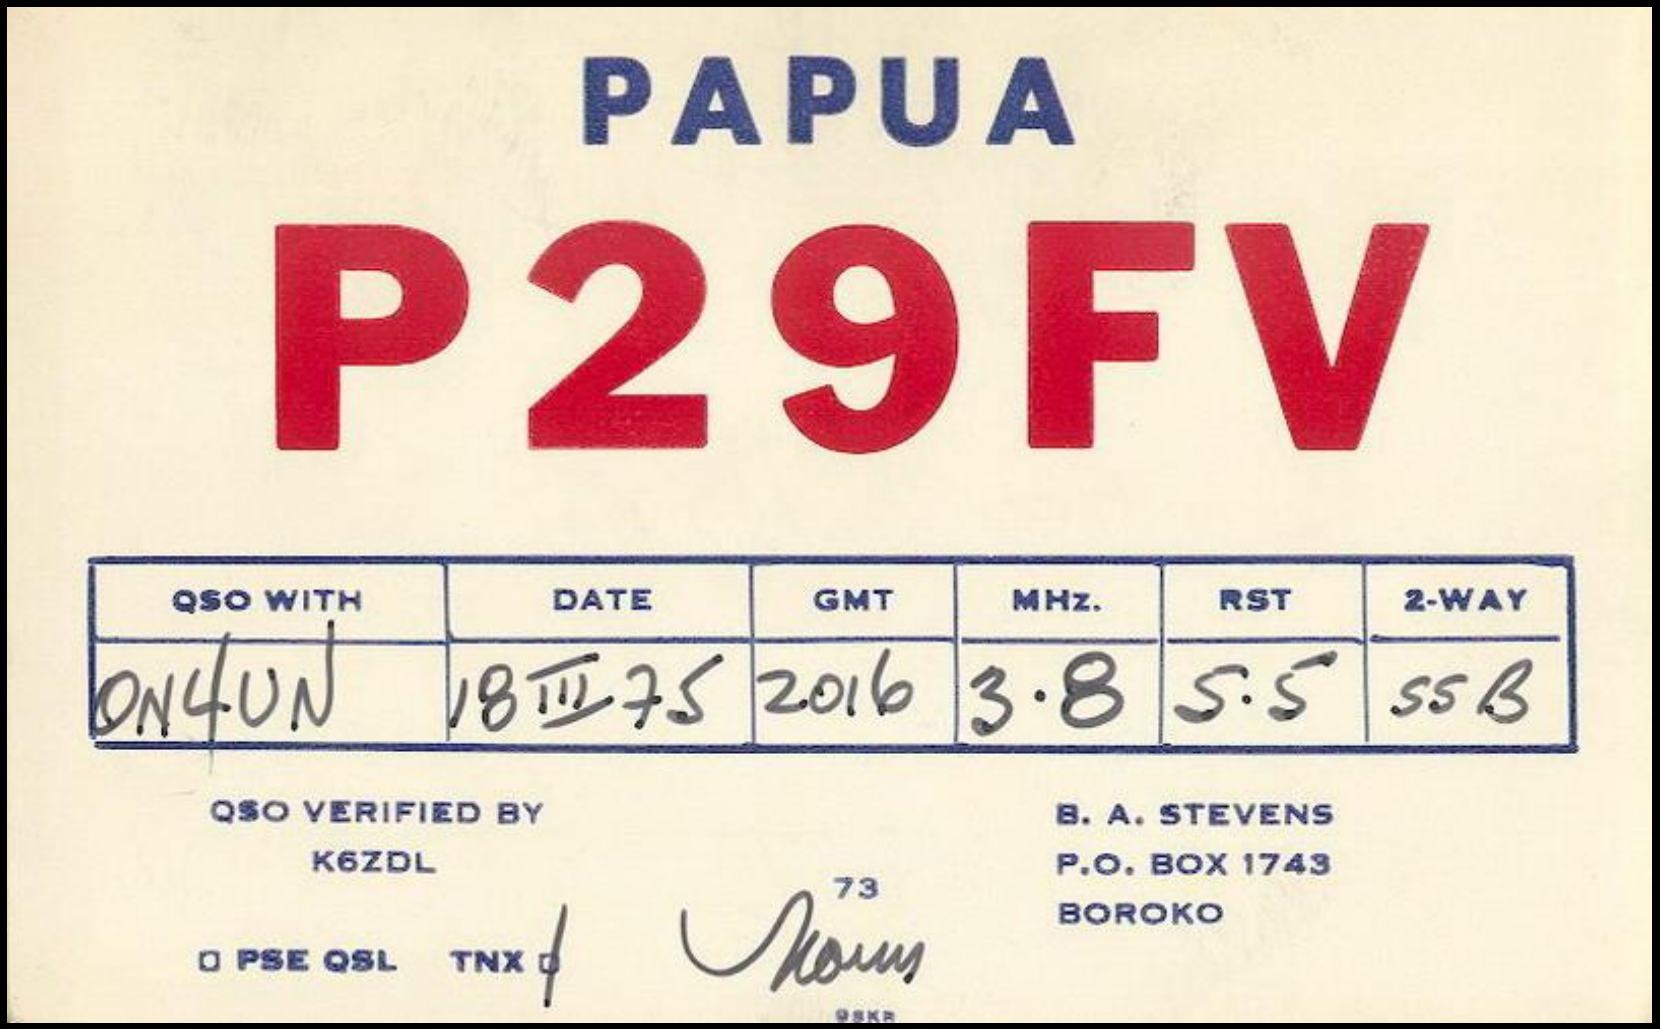

During two weeks on the MVI, R1MVW team built up a radio-city of 8 tents, with "Malyj Vysotskij Island" restaurant, sauna, rest home. Our power plant consisted of three generators with total power of 13 KW. 5 operating positions were QRV, and excellent antenna field: two verticals for 160m (25m high) and 80m (20m high), 240m long Beverage antenna system for 6 directions, 4 "MARS" masts of 10 m to 17 m high, with "Robinson" series (R-Quad) directional antennas RR-40 (3 el each 40/30m), RR-33 (3 el each 10/15/17 m), RR-33W (3 el each 12/17/20 m), 5 el yagi for 10 m, and VHF antennae set. We are glad, the due to our efforts many hams, contesters, DXers, IOTA, and VHF enthusiasts were able to make their cherished contacts with MVI. Please see details at our home page http://www.r1mvw.com.

SUDAN

Background: Sudan is the largest country in Africa, with an area of one million square miles. In the South, the Nile, the longest river in the world runs from Lake Victoria in Uganda, through Sudan and Egypt in the North and enters the Mediterranean Sea. Sudan is a multi-racial, multi-religious and multi-cultural society. It has been at war with itself since 1983. The war is due to racial, religious and cultural divisions in the country. The effects of war on the civilian population have been enormous. A large proportion of the civilian population has been driven into destitution and despair. They have been driven across borders into Ethiopia, Kenya, Zaire and Uganda, living in camps. Others faced internal displacement living in makeshift camps in and around Khartoum. Generally, they all face poverty, poor health services and diseases leading to a high mortality rate among children and the elderly.

S.R.R.A.

As a result of the detoriating situation in the country due to civil war, the Sudan Relief and Rehabilitation Association was established in order to alleviate this human suffering. The SRRA is to canvass for funds and material aids, and to provide for emergency relief, rehabilitation and long term development of the displaced Sudanese. The SRRA promotes awareness in the International community about the war in the Sudan and human rights abuses by the Sudanese regime, through participation in International conferences, organising seminars, talks and publications. The ham radio activity has been much appreciated and the SRRA gratefully accepted the funds and donations for their aims.

We want to express our sincere gratitude to the following who have kindly co-operated: Yaesu Europe B.V., NCDXF, SRRA/SPLA, Soracom, MCR, VERON, Dagoe Foundation, Hunsingo, Unicef, ICRC, H.I.DX.F, CQ Magazine, CQ ham radio, EUDXF, the Kenyan Embassy and contributors/ donators.

80M DXCC QSL CARDS ON4UN

The Penguin Islands are a string of 13 guano islands situated along the west coast of Southern Africa, off the Republic of Namibia. They were annexed by the British in the mid 19th century as part of the Cape Province (now part of the RSA). They therefore predate Namibia as an administrative entity. They are currently protected as nature reserves.
We operated from Penquin Island, in Lüderitz Bay (26 37 S 015 09 E). The island is about 1200 X 500 m, and our one tower was mounted at its peak (49 m amsl). The island is inhabited by many thousands of gulls, and a number of cormorants. There is almost no vegetation. A few derelict buildings from an old guano mine still stand on the eastern side.
We erected four rotatable Yagi antennas and three independent stations while on the island. The WARC band signal was radiated by an A3WS beam supplied by Cushcraft. The 10m monobander was supplied by INDEXA for the previous ZS9Z/ZS1 operation. The low band antenna was the same Battle Creek Special used at 3Y5X, and made available courtesy of WØCD, W8UVZ and K8GG through the NCDXF. Cabletronics kindly supplied 200m of RG-213 at cost.
An attempt was made to give extensive coverage to Europe and Japan (where the islands have remained high on wanted lists) as well as both low bands and WARC bands. In spite of indifferent conditions, these goals were met. Over 140 non-African stations were worked on 160 m alone.
NCDXF came through yet again with major financial support. Other contributors include TI2HP, W1JR and ZS5NK. K1MM, WØZV, ZS6WB (FL2100Z, 6 m equipment), ZS6P (2 generators) and ZS6BRZ (TH5DX) assisted with the logistics. The operators supplied 4 transceivers, two HF amplifiers, various towers, and two vehicles with trailers to get to and from Lüderitz harbour. SAPT issued the first ever ZSØ callsign especially for this operation.
The picture shows our first view of Penguin Island across the bows of the yacht "Sagitta". The skipper, Hans Rogge, did an excellent job.
