<h3>Version 5.24.0.03 Release Notes</h3>		

Version 5.24.0.03 Public Release (inclusive of a few 5.23 release items as indicated)

Important notes PLEASE READ:

1. If you have a crash or program lockup when starting HRD rig control, you can now disable the auto-connect with a command line switch. This will allow you to start the program and then select one of the Dem-o-Matic rigs in order to troubleshoot potential problems with your PC/Rig interface.

To use the command, start the program by executing "HamRadioDeluxe.exe /noconnect". This may be done by editing the shortcut or by going to the "Program Files\Amateur Radio\Ham Radio Deluxe" folder on the command line. Note that Program Files will have an "x86" after it on 64 bit machines.

2. In DM-780, in order to ensure that your function key labels match with the action of the functions, please complete the following on first use:
 - a. Right click on the main DM-780 toolbar
 - b. Pick customize
 - c. Pick the keyboard tab
 - d. Do a reset all

You will likely note (if you haven't already) that some functions have been moved to different function keys which are industry standard. The main ones, Send and Stop, are now F4 and F5.

Also please note that if you have previously changed your keyboard layout, this will delete all your key settings. You may want to just reset the keys for Send and Stop.

Completed items

Logbook

- Add callsign lookup feature that enables the user to set the order of preference of lookup options (5.23)
- Add popup box when sources of callsign lookup do not agree on DXCC country (5.23)
