Constructing an 80-40 meter transceiver is a simple task with Ten-Tec module units. (May be crystal controlled if you wish.) Assembly is in a logical step-by-step sequence. No guesswork—arranged handy check-off charts leave nothing to chance. Placement of modules on a chassis or breadboard is not critical. A board 10" × 8" × 1" is sufficient. Stand-offs and screws are provided. Includes calibrated tuning knob.
