

When operating D-RATS one of the email options is using the Winlink 2000 (WL2K) email via amateur radio option. Before this option can be exercised an active WL2K account must be created.

To create your WL2K account go to the link provided "<http://www.winlink.org/user>" and follow the instruction on "How TO Get an Account". I would recommend using RMS Express when setting up the account. Use the Telnet WL2K mode in RMS Express. It will take about a half an hour or so to get your password.

In order to activate your account you are required to send an email. After you have received your password back from WL2K you can send me an email at kb5hpt@winlink.org. I will reply back and your account will be active for you to send and receive email.

After the account is established and more information is needed go to winlink.org and click on the "Book of Knowledge" tab. If a Winlink 2000 station is going to be setup go to https://groups.yahoo.com/neo/groups/LOADING_WL2K_USER_PROGRAMS/conversations/messages. Click on Join Group. After joining the group click on Files. Click on Current Assignments and start with Introduction.pdf and do the tutorials.
